Allows the UE to go back to deep sleep immediately if there is no paging
Cross-slot scheduling with a small offset, reduce the power consumption for buffering when there is no page message
SSB
WUS
SSB
SSB
PDCCH
PDSCH
PDSCH #2
Synchronization time needed before each PO (Depending on UE implementation)
PDCCH decoding per PO
PDSCH decoding if there is page message
UE grouping: reduce the probability that a UE needs to decode PDSCH
