UE
AF
NEF
UDM
AMF
1. Application Layer signalling (User Identifier)
2. AF decides to perform identifier verification with 5GC
3. Nnef_VerifyIdentifier Request (User Identifier, UE address)
4. If UE is identified by IP Address, NEF will follow the steps as in 23.502 4.15.10
5. Nudm_VerifyIdentifier Request (User Identifier, SUPI)
6. UDM checks if this is the active identifier for a UE associated with this SUPI
7. Nudm_VerifyIdentifier_Response (Success/Fail)
8. Nnef_VerifyIdentifier Response (Success/Fail)
