Connect SS with DUT
Form the Tx beam towards beam peak direction
Allow Dwell time to get beam fix (~3s)
1. Activate UL gap, enable P-MRP report/ Activate UBF Tx
Measure the power for V-pol link
2. Deactivate UL gap, enable P-MRP report/ Activate UBF Tx
Measure the power for H-pol link
EIRP is calculated by average all active UL slots excluding UL gap
Total EIRP = EIRP from max(V-pol, H-pol)
Calculate the EIRP difference between 1&2
