RRC signaling to change BWP
Network and UE will keep normal Rx and Tx on old BWP
T_{HARQ}
Network will not schedule to transmit DL signals or receive UL signals on old active BWP
$T_{RRCprocessingDelay}$
$T_{BWPswitchDelayRRC}$
Network uses new active BWP to schedule UE, e.g. PDCCH and PDSCH is transmitted on new active BWP
Slot n
Slot m
Slot n + T_{HARQ}
UE needs to feedback ACK/NACK to network for RRC command
