Testing for ProSe – USIM aspects

Testing ProSe – USIM aspects

- RAN5 is planning to develop test cases for ProSe using the USIM as source of the configuration.
- Contribution [R5-152058](#) on test environment was agreed at the last RAN5 meeting:
 - Clause 4.9.3.1 (“Modified contents of the USIM Elementary Files **and additional USIM Elements files at the DF ProSe level**”) describes the configuration of the USIM containing ProSe files
 - This clause needs additional work to be completely defined
- Complete test list submitted at last RAN5 meeting is in document [R5-151036](#).
- Test cases agreed at the last RAN5 meeting are in document [R5-152060](#).

Conclusions

- RAN5 has already started an approach where ProSe configuration is stored in the USIM
- In order to avoid duplication, it would be beneficial if USIM aspects of ProSe testing can be included in the same test cases.
 - Approach similar to what was discussed for ISIM testing in TR 31.829.
- CT6 can review the RAN5 status and monitor its progress, in order to make suggestions on which aspects of the USIM might need additional testing coverage.
