Ref: RP-151624: New Work Item proposal: Indoor Positioning enhancements for UTRA and LTE

To Whom it May Concern,

Crown Castle is the largest provider of shared wireless infrastructure in the US, with a significant presence in the top 100 US markets. Crown Castle's portfolio of infrastructure consists of approximately 40,000 towers and 15,000 small cell nodes supported by approximately 16,000 miles of fiber.

NextNav has been collocating on Crown Castle's infrastructure since 2011, and is currently resident on numerous sites in top 50 markets (CMAs) in the United States. There are multiple wireless operators collocated with NextNav on these same Crown Castle sites. To date I am not aware of a single interference complaint relating to the NextNav installations from any of the wireless operators.

Sincerely,

A handwritten signature in black ink that reads 'Todd R. Bailey'.

Todd R. Bailey
