Title: Change Request to GSM 03.19 "SIM API for Java Card™"

Agenda item: 6.3.3

Document for: Approval

This document contains a change request to GSM 03.19 v7.2.0. Although it has been sent to the T3 email list on the 15th September, the short time has not allowed an email approval process by T3. The change request is considered as urgent by the sources since it has recently been discovered that the existing AID coding generates packages that are not backward compatible in respect to the linking mechanism defined in JC VM architecture.

T3 Doc	Spec	CR	Rv	Rel	Subject
T3-000489	03.19	A004		R98	Correction of the AID coding for the API packages
