

Liaison Statement

To	GCF PAG
CC	3GPP RAN 4, 3GPP RAN 5
Source	CTIA Certification
Subject	OTA Performance Testing Process
Date	August 9, 2023

Response to GCF LS

CTIA Certification would like to thank GCF PAG for their LS dated July 11, 2023.

The CTIA Certification OTA test plans have been restructured into a single overarching test plan with sections for SISO, MIMO, 5G Millimeter Wave, etc. This begins with Version 4.0.X of the *CTIA Certification Test Plan for Wireless Device Over-the-Air Performance*.

The [Test Plans section of the CTIA Certification website](#) shows which test plans are Active and which are Undergoing Test Lab Authorization and Test System Validation. Version 4.0.X has recently become active for SISO OTA testing, replacing Version 3.9.5. Only those versions categorized as Active may be utilized as these are the only versions that are operational.

Actions

CTIA Certification will update the agreement between GCF and CTIA Certification to allow GCF to utilize any active version of the *CTIA Certification Test Plan for Wireless Device Over-the-Air Performance*. This will allow GCF to use Version 4.0.X and any subsequent releases when they become active. Only active versions may be referenced in GCF documents at the time of document publication. As noted in the agreement, any reference shall also note that testing shall be conducted in a CTIA Certification Authorized Test Lab and initiated via CTIA Certification's database at <https://certify.ctiacertification.org/>.
