

Title: Liaison Statement from PVG to 3GPP RAN5 Concerning High Priority Access(HPA) Testing

Source: PTCRB Validation Group(PVG)
To: 3GPP RAN5
Cc: PTCRB

Contact Person

Name: Changho Lee, MTCC
E-mail Address: chlee@ttp.org

1. Overall Description:

The PTCRB determined to verify the operation of devices supporting High Priority Access(HPA) in 3GPP TS 24.301. PTCRB asked PVG to find the level of testing of this feature in the current 3GPP RAN5 test specifications. After research, PVG concluded that additional test case(s) are needed for 3GPP TS 36.523 to verify that a device supports this feature correctly. There are just three HPA TCs(TC 6.1.2.9, TC 6.1.2.9a, TC 8.1.2.7) in 3GPP TS36.523-1. These TCs only verify that the EstablishmentCause value of the RRCConnectionRequest which is assigned to HighPriorityAccess. PVG feels that it requires additional test cases to verify Access Classes from 11 to 15 more in detail.

2. Action(s):

The PTCRB/PVG kindly requests 3GPP RAN5 to add additional test coverage for High Priority Access (HPA, 3GPP TS 24.301).

3. Dates of Next Meetings

PTCRB #90	4-7 December 2017, Miami, USA
PVG #80	21-22 February 2018, Fremont Area, USA
