

**Source: TSG-RAN**

**Title: Work Item sheets - latest situation**

This document contains WI sheets in TSG-RAN (latest situation) for all approved Work Items. Those of the approved study items are provided in a separate document, RAN\_Study\_Items. The WI sheets for finished WIs can be found in RAN\_Work\_Items\_History (this is mentioned under the header of all relevant WIs).

See RP-020003 (draft minutes of TSG-RAN #14 meeting) for comments on the sheets provided in **yellow**.

Sheets in **green** have been re-issued where necessary and (if indeed based on the comments in RP-020003) should be considered endorsed.

For the approved Work Items in **red**, there is not yet a WI sheet.

WI sheets in **blue** are new or have changed since TSG-RAN #14 (other than because of comments at TSG-RAN #14) and also need to be endorsed.

WI sheets without background colour are for WIs that are no longer current (because they are finished or have been stopped).

The approved Work Items at the end of TSG-RAN #14 are:

1. Low chip rate TDD option
2. Base station classification
3. FDD Base station classification
4. TDD Base station classification
5. UE positioning in UTRA TDD (replaced by 34. and 35.)
6. UE positioning in UTRA FDD (replaced by 34. and 35.)
7. Void (originally Hybrid ARQ II/III)
8. NodeB Synchronisation for TDD
9. UTRA FDD Repeater Specification
10. QoS optimization for AAL type 2 connections over Iub and Iur interfaces
11. Terminal power saving features
12. PS-Domain handover for real-time services
13. RAB Quality of Service Negotiation/Renegotiation over Iu
14. RRM optimizations for Iur and Iub
15. Radio access bearer support enhancement
16. Improvement of inter-frequency and inter-system measurements
17. Improved usage of downlink resource in FDD for CCTrCHs of dedicated type
18. IP Transport in UTRAN
19. Transcoder Free Operations in UTRAN
20. Evolution of the transport in the UTRAN
21. Radio Interface Improvement Feature
22. RAN Improvement Feature
23. UE Positioning
24. Void (originally Radio Interface Testing)
25. Void (originally Requirement on Equipment)
26. Low Chip Rate TDD Physical Layer
27. Low chip rate TDD layer 2 and layer 3 protocol aspects
28. Low Chip Rate TDD RF Radio Transmission/ Reception, System Performance Requirements and Conformance Testing
29. Void (originally Smart antenna)
30. Low Chip Rate TDD UE radio access Capability
31. Low chip rate TDD UTRAN network Iub/Iur protocol aspects
32. RAB Quality of Service Negotiation over Iu
33. RAB Quality of Service Renegotiation over Iu
34. Iub/Iur interfaces for UE positioning methods supported on the radio interface release 99
35. UE positioning enhancements
36. RAN Technical Small Enhancements and Improvements
37. DSCH power control improvement in soft handover
38. Transport bearer modification procedure on Iub, Iur and Iu (originally Migration to Modification procedure)
39. UMTS 1800
40. RAN work for Intra Domain Connection of RAN Nodes to Multiple CN Nodes
41. RAB Quality of Service Negotiation over Iu during relocation
42. Open interface between the SMLC and the SRNC within the UTRAN to support A-GPS Positioning

43. High Speed Downlink Packet Access (HSDPA)
44. High Speed Downlink Packet Access (HSDPA) - *Physical Layer*
45. High Speed Downlink Packet Access (HSDPA) - *layer 2 and 3 aspects*
46. High Speed Downlink Packet Access (HSDPA) - *Iub/Iur Protocol Aspects*
47. High Speed Downlink Packet Access (HSDPA) - *RF Radio Transmission/ Reception, System Performance Requirements and Conformance Testing*
48. Multiple Input Multiple Output antennas (MIMO)
49. Void (originally Gated DPCCH Transmission)
50. UMTS 1900
51. Enhancement on the DSCH hard split mode
52. NodeB Synchronisation for 1.28 Mcps TDD
53. RL Timing Adjustment
54. Separation of resource reservation and radio link activation
55. Re-arrangement of Iub Transport Bearers (originally Traffic Termination Point Swapping)
56. Open interface between the SMLC and the SRNC within the UTRAN to support Rel-4 positioning methods
57. UE positioning enhancements for 1.28 Mcps TDD
58. Base Station Classification for 1.28 Mcps TDD
59. Iur Common Transport Channel Efficiency Optimisation
60. Iur Neighbouring cell reporting Efficiency Optimisation
61. Beamforming enhancements (originally Beamforming)
62. Beamforming requirements for UE
63. Improvement of RRM across RNS and RNS/BSS
64. Support of Site Selection Diversity Transmission in UTRAN
65. Enhancement of Broadcast and Introduction of Multicast Capabilities in RAN

**14b The WI is a Building Block: parent Feature – Radio Interface Improvement**

### 3. FDD Base station classification

Last distributed as: RAN\_Work\_Items\_after\_RAN\_13 (originally RP-000183)

#### Work Item Description

#### Title

FDD Base Station Classification

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*none*

#### 3 Justification

Current TSG RAN WG4 specifications have been done according to the requirements for the macrocell base stations (NodeBs). For the UTRA evolution requirements specific for other type of base stations are needed as well (e.g. micro, pico)

#### 4 Objective

- definition of base station classes according to deployment scenarios (e.g. macro, micro, pico)
- identification, review and possible update of radio parameters dependent on deployment scenarios
- identification, review and possible update of UTRAN (Node B) measurement requirements and conformance where the maximum base station output power is reflected, dependent on deployment scenarios
- review and possible update of conformance test specifications
- recording of related information into RF System Scenarios

#### 5 Service Aspects

## **8. NodeB Synchronisation for TDD**

**Last distributed as: RAN\_Work\_Items\_after\_RAN\_9 (originally RP-000055)**

**This WI was finished in TSG-RAN #11. The WI sheet can be found in RAN\_Work\_Items\_History.**

## **9. UTRA FDD Repeater Specification**

**Last distributed as: RAN\_Work\_Items\_after\_RAN\_9 (originally RP-000083)**

**This WI was finished in TSG-RAN #11. The WI sheet can be found in RAN\_Work\_Items\_History.**

## **10. QoS optimization for AAL type 2 connections over lub and lur interfaces**

**Last distributed as: Revised WI sheet (QoS) (originally RP-000188)**

**This WI was finished in TSG-RAN #11. The WI sheet can be found in RAN\_Work\_Items\_History.**

## 11. Terminal power saving features

Last distributed as: RP-010485 (originally RP-000189)

### Work Item Description

#### **Title: Terminal power saving**

#### **1. 3GPP Work Area**

X	Radio Access
	Core Network
	Services

#### **2 Linked work items**

*None*

#### **3 Justification**

The UE battery is an essential resource which has direct impact on standby and connected time and can be enhanced by new features defined for UTRA.

#### **4 Objective**

The objective of this Work Item is to define new features which can contribute to gains in terms of battery saving. This encompasses both enhancements on the radio interface or network interfaces which would allow a network to optimise battery utilisation.

#### **5 Service Aspects**

*None*

## 15. Radio access bearer support enhancement

Last distributed as: RP-010915 (originally RP-000140)

### Work Item Description

#### Title

Radio Access Bearer support enhancement

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

#### 3 Justification

The increasing interest in IP based services demands special optimisation of the means by which a radio access bearer can be provided by UTRAN.

#### 4 Objective

This work item should have the scope of adding necessary functionality to the Uu, Iur and Iu interface in order to efficiently support RT traffic, e.g. VoIP. Examples of such functionality are:

- Radio Access Bearer multiplexing in PDCP
- Support of variable formats over Iu and unequal error protection over Uu
- Channel type switching for logical channels
  - Today it is only possible to switch all logical channels of one UE, not individual. For DSCH it would be much better to be able to switch single logical channels
- IP header removal as developed within GERAN
- RFC3095 context relocation in SRNS relocation

#### 5 Service Aspects

The intention with the work item is to better and more efficient support IP based services.

#### 6 MMI-Aspects

*None*

#### 7 Charging Aspects

*None*

## 16. Improvement of inter-frequency and inter-system measurements

Last distributed as: RAN\_Work\_Items\_after\_RAN\_14 (originally RP-000180)

### Work Item Description

#### Title

Improvement of inter-frequency and inter-system measurements

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*none*

#### 3 Justification

Compressed mode in Release-99 covers limited set of methods of implementing the compressed mode for enabling measurements on other frequencies. There have been methods suggested that potentially improve the system capacity and operational flexibility in addition to the existing methods.

- The following two technologies have been identified as candidates for Release 2000 for compressed mode improvements:
  1. Compressed mode with puncturing and flexible positions
  2. Combination of the existing methods (including method in point 1)

#### 4 Objective

The purpose of this work item is to work on the compressed mode improvements for improved system performance.

## 17. Improved usage of downlink resource in FDD for CTrCHs of dedicated type

Last distributed as: RAN\_Work\_Items\_after\_RAN\_13 (originally RP-000169)

### Work Item Description

#### Title

Improved usage of downlink resource in FDD for CTrCHs of dedicated type

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*None*

#### 3 Justification

In the RAN 1 specifications, one CTrCH of dedicated type may be mapped onto several physical channels (channelisation codes). However these codes must have the same spreading factor in order to have an equal physical channel segmentation. In order to have some flexibility in the resource allocation in downlink, the possibility to have multiple CTrCHs of dedicated type was introduced in the RAN 1 specifications for R99. This allows to have codes with different spreading factors and distribute transport channels onto separate CTrCHs taking into account possibly very different QoS requirements, which results in some cases in a smaller amount of allocated resource. RAN 2 and RAN 3 specifications do not support multiple CTrCHs of dedicated types in R99, limiting hence the flexibility on resource allocation.

#### 4 Objective

Introduction of the possibility to map transport channels belonging to a radio link onto multiple codes with different spreading factors as a way to minimise the overall amount of allocated resource, while fulfilling possibly very different QoS requirements for each of the transport channels,

## 18. IP transport in UTRAN

Last distributed as: RAN\_Work\_Items\_after\_RAN\_14

### Work Item Description

#### Title

IP-transport in UTRAN

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*None*

#### 3 Justification

Release 2000 workplan includes, as an option, an all-IP transport architecture aimed at allowing operators to deploy IP technology to deliver 3<sup>rd</sup> generation services.

The foreseen benefits of the introduction of IP as transport technology inside the UTRAN are:

- To give the operator the option to use IP transport as an alternative to AAL2/ATM transport within UTRAN.
- In which networks, or parts of network, the IP option is beneficial over the AAL2/ATM option will vary between different operators, e.g. depending on existing transport network infrastructure, other applications using the same transport, available physical links, etc.
- A consistent approach allowing for end-to-end IP transport solutions.
- The more detailed requirements and expected benefits will be documented in the Technical Report.

#### 4 Objective

The purpose of this new work task is to enable the usage of IP technology for the transport of signalling and user data over Iu, Iur and Iub in the UTRAN. This work task is only related to the transport aspects.

#### 5 Service Aspects

Don't know					

10

**Expected Output and Time scale (to be updated at each plenary)**

The first step of the work will consist in providing the necessary changes to the generic specifications (TS 25.401, TS 25.402). Then, the CRs to the other specs introducing the possibility to use IP as a transport mechanism will be generated.

The QOS aspects should be studied closely with IETF.

## 20. Evolution of the transport in the UTRAN

Last distributed as: RAN\_Work\_Items\_after\_RAN\_9 (originally WI-EVUTRAN)

### Work Item Description

#### **Title: Evolution of the transport in the UTRAN**

This work item intends to introduce mechanism necessary to allow an evolution of transport mechanism in the RNS following requirement put by the core network.

#### **1 3GPP Work Area**

X	Radio Access
	Core Network
	Services

#### **2 Linked work items**

*None*

#### **3 Justification**

In order to cope with new requirement coming from new service definition, it is necessary to introduce mechanism to support new transport mechanisms or to improve the existing ones. Typical examples of such mechanisms are the following: introduction of an IP transport inside the RNS and AAL2 QoS optimisation

#### **4 Objective**

The main objective for this building block is to ensure that adequate mechanism are provided to handle the different type of traffic (i.e. signalling and user flow) inside the RNS to ensure that requirements in terms of QoS and delay are taken into account.

This shall be valid also for efficient O&M transport of the different interfaces inside the RNS. This includes the Iub, Iur and any protocol suites at the Iu reference point.

## 21. Radio Interface Improvement Feature

Last distributed as: WI-Radio-if-improve2

### Work Item Description

#### Title: Radio Interface Improvement

This work item intends to introduce new mechanisms allowing improvements on the way the Radio Interface is used.

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*None*

#### 3 Justification

In order to cope with new techniques providing more efficient use of the bandwidth for the radio interface, it is necessary to ensure backward compatibility in terms of service offering.

When a new system is designed it is quite normal that some work is required also to enhance the already defined mechanism at the physical layer as well as at the signalling level. Thus this work item will cope with technical enhancement and improvement for the Radio path.

#### 4 Objective

The main objective for this feature is to ensure that adequate mechanisms are provided to allow enhancement of the radio interface in a backward compatible manner.

## 22. RAN Improvement Feature

Last distributed as: WI-RAN-improve2

### Work Item Description

#### Title: RAN Improvement

This work item intends to introduce new mechanisms allowing improvements on all aspects dealing with the RNS internal interfaces as well as the interface towards the core network. In addition this includes internal mechanisms to be introduced in the Technical Specification under responsibility of TSG RAN for the RNS part of the network, e.g., algorithms for QoS handling.

#### 1 3GPP Work Area

X	Radio Access
X	Core Network
	Services

#### 2 Linked work items

*None*

#### 3 Justification

This work item has been created to collect all evolutions of the Radio Network System. This includes transport of user and signalling plane as well as protocols over all interfaces of the RNS. The Iu and Iur reference points are also covered by this Feature description.

#### 4 Objective

The main objective of this Feature is to cover all evolution of the internal RNS architecture and protocol.

## 23. UE Positioning

Last distributed as: UE\_positioning.doc

### Work Item Description

#### 1. Title

UE positioning

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

- Location Based Services (LCS)
- Low Chip rate TDD option

#### 3 Justification

UE positioning is a function of UE and UTRAN (Access Stratum) which can be useful for a number of purposes:

- Radio Resource Management
- Support for location based services (LCS)

#### 4 Objective

UE positioning is a feature that allows:

- UTRAN to calculate the geographical co-ordinates of a UE known by UTRAN
- UTRAN to provide sufficient information so that capable UEs can calculate autonomously their geographical co-ordinates
- UTRAN to answer to Core Networks requests for UE position

UE positioning feature encompasses a collection of positioning methods, allowing different level of accuracy and operational scenarios.

## 40. RAN work for Intra Domain Connection of RAN Nodes to Multiple CN Nodes

Last distributed as: RAN\_Work\_Items\_after\_RAN\_14 (originally RP-000689)

### Work Item Description

#### Title

RAN work for  
Intra Domain Connection of RAN Nodes to Multiple CN Nodes

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

F1 Intra Domain Connection of RAN Nodes to Multiple CN Nodes: Overall System Architecture  
SA 2 is responsible for this.

BB3 GERAN work for Intra Domain Connection of RAN Nodes to Multiple CN Nodes  
[GERAN 2 is predicted to lead the work in GERAN]

BB4 CN work for Intra Domain Connection of RAN Nodes to Multiple CN Nodes  
[CN 1 is predicted to lead the work in CN]

#### 3 Justification

In the current network architecture, an RNC can only be connected to one MSC and/or one SGSN. The same restriction applies to BSCs. This has the following consequences:

- a) when a BSC (or RNC) has a relatively large capacity compared to that of an MSC/SGSN there are frequently significant wastages of hardware. (For example, if a BSC has 40% of the capacity of an MSC, do you connect 2 or 3 BSCs to that MSC?)
- b) as networks carry more traffic, the geographic area covered by one MSC or SGSN (of a given capacity) decreases. However, subscribers still tend to travel the same physical distances and therefore there are more inter-MSC/SGSN registration updates. The signalling associated with these inter MSC/SGSN updates causes additional load on MSCs, SGSNs, HLRs, the core network signalling networks and on the radio interface signalling channels.

The ability to connect RNCs and BSCs to more than one MSC and to more than one SGSN could reduce the above problems. In addition, the ability to provide load sharing between MSCs (SGSNs) would further improve the efficiency of hardware utilisation.

This work will focus on a solution where a routing function is placed in the RNC (or BSC). This avoids most of the problems of a standalone node (TR 23.913 called it the Turbo Routing Function), while retaining the other advantages of described in R'99, TR 23.913.

This Work Item (which is a Feature) proposes to provide a standardised mechanism for the connection of multiple MSCs (and SGSNs) to an RNC or a BSC (both A/Gb mode and Iu mode) which reduces mobility management signalling and permits improved efficiency in hardware utilisation.

It is intended that this new concept is an architectural option for any PLMN. Its deployment, or non-deployment, by one network operator should not place requirements on other network operators.

#### 4 Objective

The objective of this Work Item is to produce the necessary updates to the RAN TSs.

The list of affected existing specifications is given in section 10.

## 43. High Speed Downlink Packet Access (HSDPA)

Last distributed as: RP-010915 (originally RP-010262)

### Work Item Description

#### Title

High Speed Downlink Packet Access

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

HSDPA Physical Layer  
HSDPA Layer 2 and 3 Protocol Aspects  
HSDPA UTRAN Iub/Iur Protocol Aspects  
HSDPA RF Radio Transmission/ Reception, System Performance Requirements and Conformance Testing

#### 3 Justification

In RAN#7 a study item on High Speed Downlink Packet Access was approved. The aim of the study was to look at the feasibility and potential of various techniques such as Adaptive Modulation and Coding and Hybrid ARQ for increasing throughput and peak data rates with reduction in concomitant delay. Since RAN#7, RAN WG1 and RAN WG2 have considered many contributions on this subject and have concluded on the feasibility and potential of various techniques and provided recommendations on the inclusion of these techniques for Rel-5. This work item is in line with the recommendations from WG2 and WG1.

#### 4 Objective

The technical objective of this work item is the integration of HSDPA functionality in UTRA, in line with recommendations from WG1 and WG2, to increase the throughput and peak data rates while reducing the overall delay. The work tasks include support for both FDD and TDD. In those cases where differences between FDD and TDD are identified, they should be considered as separate work tasks.

- For physical layer, the features include:
  - Physical and Transport Channels mapping
  - Higher Order Modulation
  - Multiplexing and Hybrid ARQ Channel Coding
  - Physical Layer procedures
- For higher layers:
  - Architecture aspects
  - MAC entity (Scheduling and Hybrid ARQ protocol)
  - Interlayer procedures in connected mode
  - Control plane aspects

- UE capabilities
- For Iur/Iub interface:  
For the adoption of HSDPA some modifications to the present Iub and Iur signalling and user data streams will need to be included.
- For radio transmission and reception:
  - UE radio transmission and reception
  - BTS radio transmission and reception
  - BTS Conformance testing
  - Requirements for support of Radio Resource Management

	Services

#### 2 Linked work items

HSDPA Layer 2 and 3 Protocol Aspects  
HSDPA UTRAN Iub/Iur Protocol Aspects  
HSDPA RF Radio Transmission/ Reception, System Performance Requirements and Conformance Testing

#### 3 Justification

The study item on HSDPA was concluded in RAN WG#11 with recommendations on the techniques to be included in Rel-5. This work item enables the inclusion of the identified techniques at the physical layer.

#### 4 Objective

The technical objective of this work item is the integration of HSDPA physical layer functionality in UTRA, while maintaining commonality with the R99 general physical layer aspects to the maximum extent possible.

- For physical layer, the features include:
  - Physical and Transport Channels mapping
  - Higher Order Modulation
  - Multiplexing and Hybrid ARQ Channel Coding
  - Physical Layer procedures

The work task for physical layer procedures will also consider additional physical layer measurements that may be required.

## 45. High Speed Downlink Packet Access (HSDPA) - layer 2 and 3 aspects

Last distributed as: RP-010915 (originally RP-010262)

### Work Item Description

#### Title

High Speed Downlink Packet Access - layer 2 and 3 aspects

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

HSDPA Physical Layer  
HSDPA UTRAN Iub/Iur Protocol Aspects  
HSDPA RF Radio Transmission/ Reception, System Performance Requirements and Conformance Testing

#### 3 Justification

The study item on HSDPA was concluded in RAN WG#11 with recommendations on the techniques to be included in Rel-5. This work item enables the inclusion of the identified techniques at layers 2 and 3.

#### 4 Objective

The technical objective of this work item is the integration of HSDPA physical layer functionality in UTRA, while maintaining commonality with the R99 general layer 2 and 3 aspects to the maximum extent possible. While most of the control aspects will be identical to those for R99, some additional signaling for the configuration of HSDPA channels will need to be defined. Also, in order to enable the support of fast scheduling, support for a new MAC-HSDSCH entity shall be included. This new entity at the Node B will handle all the scheduling and HARQ (non-physical layer aspects) of the HSDPA feature. UE capabilities will need to be updated to indicate support of HSDPA. Physical Layer aspects of UE capabilities will be handled by WG1.

- For layers 2 and 3, the features include:
  - Architecture aspects
  - MAC entity (Scheduling and Hybrid ARQ protocol)
  - Interlayer procedures in connected mode
  - Control plane aspects
  - UE capabilities

## 51. Enhancement on the DSCH hard split mode

Last distributed as: RAN\_Work\_Items\_after\_RAN\_14 (originally RP-010469)

### Work Item Description

#### Title

Enhancement on the DSCH hard split mode

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*none*

#### 3 Justification

1) It was identified by RAN WG's (WG1, WG2 and WG3) that in the current Rel99 specification, logical split cannot be supported over Iur during the DSCH soft handover if DSCH scheduling should be done in DRNC. Furthermore, hard split has advantage over logical split in the sense that it can be supported over Iur. However, it was also identified that hard split has some limitation and therefore there is some need to study the enhancement for TFCI coding in the DSCH hard split mode

2) And also, it was identified by RAN WG1, that in the current Rel99 specification, TFCI2 (TFCI for DSCH) is not transmitted from all the cells in the active set when the UE is in soft handover. Furthermore, in the current specification, the power offset should be set high enough to always detect TFCI bits reliably even if UE is not in soft handover.

#### 4 Objective

The purpose of this work item is to specify the enhancements of TFCI coding and power control in DSCH hard split mode for UTRA FDD. This work item is composed of two work tasks.

1) TFCI coding in DSCH hard split mode

Currently DSCH hard split mode can support only 5 bit long DSCH and DCH TFCIs. As a result, the number of TFCI is limited upto 32 for DCH and DSCH in DSCH hard split mode. A new TFCI coding scheme to support the variable bit length can enhance the DSCH hard split mode.

2) TFCI power control in DSCH hard split mode

Currently the reliability of TFCI cannot be guaranteed when the UE is in soft handover. As well, in the current specification, the power offset should be set high enough to always detect TFCI bits reliably even if UE is not in soft handover. New power control scheme for TFCI can enhance the DSCH hard split mode.

## 52. NodeB Synchronisation for 1.28 Mcps TDD

Last distributed as: RP-010915 (originally RP-010216)

### Work Item Description

#### Title

NodeB Synchronisation for 1.28 Mcps TDD

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*none*

#### 3 Justification

NodeB synchronisation is beneficial in UTRA TDD to minimise cross-interference in neighbouring cells. Currently, for the 1.28 Mcps TDD option no method has been specified how NodeB synchronisation can be achieved with UTRAN's and UE's internal means such as signalling via the air interface.

The following benefits of the introduction of NodeB synchronisation by internal means are seen:

- A substantial reduction of the cost of the transmission network.
- An autonomous synchronisation procedure without the need of external references.
- An easily extendable method for the purpose of inter-system NodeB synchronisation.

#### 4 Objective

The purpose of this new work item is to enable the synchronisation of NodeBs in UTRA TDD for the 1.28 Mcps option by UTRAN's and UE's internal means such as air interface signals and NodeB cross measurements. NodeB synchronisation involves

- radio frame and multi frame synchronisation and
- intra-system and inter-system synchronisation.

## 53. RL Timing Adjustment

Last distributed as: RAN\_Work\_Items\_after\_RAN\_14 (originally RP-010261)

### Work Item Description

#### Title

RL Timing Adjustment

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*None*

#### 3 Justification

Optimising the existing procedures will increase the efficiency of UTRAN and the quality of service to the end user.

#### 4 Objective

WG1 has already expressed (outgoing liaison R1-010135) that in the event of RL adjustment being required, the Rel99/Rel4 process of deleting and re-establishing a RL temporarily causes additional DL interference in one or more cells due to loss of macro-diversity gain. In addition it slightly increases the risk of dropped calls. Therefore RAN WG1 asked RAN WG3 to consider implementing a RL adjustment procedure for a future release.

This work task aims at introducing this possibility to execute a timing adjustment of one individual RL, typically one of several RLs in the active set.

## 54. Separation of resource reservation and radio link activation

Last distributed as: RAN\_Work\_Items\_after\_RAN\_13 (originally RP-010487)

### Work Item Description

#### **Title**

Separation of resource reservation and radio link activation

#### **1 3GPP Work Area**

X	Radio Access
	Core Network
	Services

#### **2 Linked work items**

*None*

#### **3 Justification**

Optimising the existing procedures will increase the efficiency of UTRAN and the quality of service to the end user.

#### **4 Objective**

This work task aims at introducing the possibility to have dedicated resources reserved in UTRAN without transmitting energy on the corresponding radio link(s). Furthermore, a separate mechanism for activating and deactivating radio transmission related to the reserved resources shall be introduced. The study of this mechanism shall also consider the possibility to reserve resources without allocating them to a particular UE. In this case, the actual allocation of the reserved resources to a particular UE would be delayed until the activation of the radio transmission.

The separation will enable the following optimisations in UTRAN:

- delayed activation of a radio link at soft handover for high bit rate users, thus avoiding a potential handover problem;
- quicker channel type switching back to Cell\_DCH;
- quicker radio link additions of radio links that recently were part of the active set;
- benefit from statistical multiplexing at RRM level (by reserving resources on a given cell based on HO probability laws, Busy Hour Call Attempts statistics,...).

## 55. Re-arrangement of Iub Transport Bearers (originally Traffic Termination Point Swapping)

Last distributed as: RAN\_Work\_Items\_after\_RAN\_14 (originally RP-010465)

### Work Item Description

Title: **Work Item Description for the Re-arrangement of Iub Transport Bearers**

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

None identified.

#### 3 Justification

In the current NBAP specification (TS25.433) there is no mechanism to change the D-NBAP link for the given Node B Communication Context and secondly there is no mechanism to switch the existing transport bearers from one physical termination point to another. Fixing of the transport resources may cause the transport resource fragmentation problem in the implementation where the physical resources are distributed. In the worst case the transport resource fragmentation may cause the rejection of some large capacity call. To solve this problem there is a need for a new procedure allowing the Node B to initiate transport resource reallocation. This new procedure allows the use of distributed physical resources more efficiently by allowing a defragmentation of the resources and it may be used also due the O&M reasons.

#### 4 Objective

The objective of this work item is to introduce a new procedure in the NBAP enabling Node B to initiate switching of the transport bearers and a Communication Control Port from one physical termination point to another.

# 56. Open interface between the SMLC and the SRNC within the UTRAN to support Rel-4 positioning methods

Last distributed as: RP-010719

## Work Item Description

Title: **Open interface between the SMLC and the SRNC within the UTRAN to support Rel-4 positioning methods**

### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

### 2 Linked work items

None identified.

### 3 Justification

In 3GPP standalone SMLC has been specified for A-GPS method and it is needed to consider also other Rel'4 positioning methods .

### 4 Objective

The objective of this work item is to extend the Iupc interface for the support of all Rel'4 positioning methods positioning, i.e. Cell ID based, OTDOA based and A-GPS

It shall be transparent for the UE whether standalone SMLC is used or not.

### 5 Service Aspects

## 57. UE positioning enhancements for 1.28 Mcps TDD

Last distributed as: RAN\_Work\_Items\_after\_RAN\_13 (originally RP-010215)

### Work Item Description

#### Title

UE positioning enhancements for 1.28 Mcps TDD

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

none

#### 3 Justification

UE positioning is a function of UE and UTRAN (Access Stratum) which can be utilised for a number of purposes:

- Radio Resource Management
- Support for location based services (LCS)

Different accuracy can be requested when positioning a UE for these purposes.

#### 4 Objective

The purpose of this work item are to increase the accuracy of the UE positioning or define methods allowing UE positioning with less complexity for a given accuracy.

Examples are refinement and adoption of methods that are defined for release 5.

#### Title

Base Station Classification for 1.28 Mcps TDD option

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*none*

#### 3 Justification

Current TSG RAN WG4 specifications have been done according to the requirements for the general purpose base station (Node B). For the UTRA evolution requirements specific for other type of base stations are needed as well (e.g. local area base station).

#### 4 Objective

- definition of base station classes according to deployment scenarios (e.g. indoor, outdoor)
- identification, review and possible update of radio parameters dependent on deployment scenarios
- identification, review and possible update of UTRAN (Node B) measurement requirements and conformance where the maximum received signal level at the base station is reflected, dependent on deployment scenarios
- review and possible update of conformance test specifications
- recording of related information into RF System Scenarios

## 59. Iur Common Transport Channel Efficiency Optimisation

Last distributed as: RAN\_Work\_Items\_after\_RAN\_14 (originally RP-010473)

### Work Item Description

#### Title

Iur Common Transport Channel Efficiency Optimisation

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*None*

#### 3 Justification

Optimising the existing procedures will increase the efficiency of UTRAN and the quality of service to the end user.

#### 4 Objective

Currently in RACH/FACH state, the SRNC will have to execute the RNSAP Common Transport Channel Resources Initialisation procedure every time the UE moves from one cell to another cell in the DRNS. This procedure is required to provide the SRNC with:

- A) Information on supported MAC-C lengths;
- B) Flow control information;
- C) Possibility to request another bearer;

In many cases, many (all) S-CCPCH's in a DRNS will be configured with the same TB sizes. If in such a situation a UE moves from one cell to another cell under the same DRNS, there is no reason to update A).

If the DRNS can continue to use the same flow-control situation, there is no reason to update B).

If, in the case A) and B) are not required and the SRNC does not require the UE to start using a new transport bearer, there is no need to execute the CommonTransport Resource Initialisation procedure.

A mechanism shall be introduced which reduces the need for a Common Transport Resources Initialisation procedure where possible.

## 60. Iur Neighbouring cell reporting Efficiency Optimisation

Last distributed as: RAN\_Work\_Items\_after\_RAN\_14 (originally RP-010474)

### Work Item Description

#### Title

Iur Neighbouring cell reporting Efficiency Optimisation

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

*None*

#### 3 Justification

Optimising the existing procedures will increase the efficiency of UTRAN and the quality of service to the end user.

#### 4 Objective

In Rel99/Rel4, everytime a RL is established in a certain cell, the SRNC will get information about certain characteristics of cells neighbouring the cell in which the RL is established. This information is provided regardless of whether the SRNC already has received this information before e.g. as neighbouring cell information for a previous RL establishment.

A mechanism shall be studied and if it is considered beneficial introduced, which increases the efficiency of the neighbouring cell information reporting by avoiding the transport of information the SRNC is already aware of.

## 63. Improvement of RRM across RNS and RNS/BSS

Last distributed as: RP-010947

### Work Item Description

Title: **Improvement of RRM across RNS and RNS/BSS**

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

None identified.

#### 3 Justification

Radio resource management across RNS and RNS/BSS is a necessary tool for operators with GSM and UMTS networks. The operator must be able to place traffic on the technology that meets the operator's strategy and requirements be it for coverage, service or load. .

#### 4 Objective

The objective of this work item is to identify tools for facilitating an efficient and cost effective method for radio resource management across RNS and RNS/BSS. The method, which allows resource management across RNS and RNS/BSS shall not affect UE/MS. The method is targeted for operation between UTRAN & Iu mode GERAN.

If there is a need to define new interface, then this interface shall be open.

## 64. Support of Site Selection Diversity Transmission in UTRAN

Last distributed as: RP-010951

### Work Item Description

#### Title: Support of Site Selection Diversity Transmission in UTRAN

#### 1 3GPP Work Area

X	Radio Access
	Core Network
	Services

#### 2 Linked work items

None.

#### 3 Justification

SSDT is defined in R99 and Rel4 specifications. In recent discussions in RAN#14 it was clarified that there is no full support of SSDT in the UTRAN. Indeed in R99 and Rel4 specifications it is assumed that the Qth parameter in Node B is set as an OAM parameter with vendor specific definition & signaling ranges. However support of Qth parameter over NBAP would be needed for multi-vendor NodeBs for deployment of SSDT and hence full support of SSDT on the UTRAN side. In addition the physical quantity (UTRAN measurement) used in combination with the Qth parameter should be defined in RAN 1 25.214 specification and performance requirements for the Node B defined.

#### 4 Objective

The objective of this WI is to provide the necessary changes and additions required in the current RAN specifications to provide full support of SSDT in UTRAN. Specifically the work item should:

- Specify the Qth parameter
- Specify the physical measurement quantity at node B for use in combination with the Qth parameter
- Specify performance requirements for Node B in RAN4 specifications
- Specify signalling of the Qth parameter over the Iub and Iur interfaces

#### 2 Linked work items

- TSG SA WG1 WI title: "*Enhancement of Broadcast and Introduction of Multicast*"  
=> TS 22.146: "*Multicast Broadcast Multimedia Service (MBMS)-Stage 1*"
- TSG SA WG2 WI title: "*Multimedia Broadcast/Multicast Service Architecture*"

More WIs could be generated during the course of 2002.

#### 3 Justification

TSG SA1 has been working on the service requirements of MBMS which is a new bearer service. TS 22.146 is the specification for the MBMS service requirements defined by TSG SA WG1. TSG SA2 has already started discussions (SA WG2 #20 meeting) on the architectural issues of MBMS.

The intention of this WI is to address the RAN issues and required changes in order to accommodate MBMS.

#### 4 Objective

The objective of this WI is to analyse and provide the necessary changes and additions required in the current RAN specifications.

- Analysis and enhancement of optimized solutions over the air interface for support of MBMS.
- Analysis and enhancement of the existing interfaces needed to support MBMS.
- Analysis and creation/modification of UTRAN functions needed to be standardized for the support of MBMS.

#### 5 Service Aspects

Multicast service capabilities are introduced.

#### 6 MMI-Aspects

*None*

#### 7 Charging Aspects

It shall be possible to charge the receiver of the multicast.

## 8 Security Aspects

It shall be possible to secure multicast.

## 9 Impacts

Affects :	USIM	ME	AN	CN	Others
Yes		X	X	X	
No	X				
Don't know					

## 10 Expected Output and Time scale (to be updated at each plenary)

New specifications						
Spec No.	Title	Prime resp. WG	2 <sup>nd</sup> ary resp. WG(s)	Presented for endorsement at plenary#	Approved at plenary#	Comments
TR	Enhancement of Broadcast and Introduction of Multicast Capabilities in RAN	R2	R3, R1, R4	RAN #16	RAN #17	New Technical Report
