Dear Colleagues,

CableLabs would like to thank 3GPP SA2 for their work on Release 19 FS_MASSS Study Item. Considering the tight deadline of this work, CableLabs would also like to use this opportunity to draw attention to a few requirements for ATSSS Phase 4 of importance to members. CableLabs would appreciate these comments to be taken into consideration.

1. Solutions for KI#2.2 should try to minimize the impacts on the ATSSS features designed in previous Releases to prevent market fragmentation.
2. For many members, non-3GPP access is the primary access mode for mobile devices and in many scenarios these devices must operate only using non-3GPP access. In this context, CableLabs hopes that solutions for KI#2.2 support scenarios in which either 3GPP and non-3GPP access is unavailable for a long time and the mobile devices must be controlled over any available access. Such solutions should not require significant changes to the current procedures for single-access PDU session using non-3GPP access.

CableLabs hopes 3GPP SA2 may be able to take these requirements into account when considering solutions for KI#2.2 in 3GPP TR 23.700-54.

Sincerely,

Yunjung Yi
Director of Wireless Standardization
CableLabs
