Action: Information

Title: Proposal for 3G and SMG Specification Handling.

This document proposes general principles of 3G and ETSI SMG Specification Handling, *the fine detail of the management of the process would need to be developed.*

Rationale:

The 3GPP require a full set of 3rd Generation system specifications, based on the GSM Core Network and including many of the existing GSM Services. To realise the system, much of the GSM specifications need to be modified and incorporated into the 3rd Generation System Specifications. For these Specifications to evolve work must be carried out within 3GPP and under the approval responsibility of the TSGs.

Divergence of evolved GSM and 3rd Generation system specifications should be avoided.

Duplication of development work and the creation of almost identical sets of Specifications should be avoided.

In most circumstances, technical corrections to earlier GSM Releases will impact the later 3rd Generation versions of the specification, requiring CRs to all versions.

"Fine tuning" of previous GSM Releases will continue into 2000.

Proposal:

To avoid divergence of the 3G and GSM specifications, the responsibility for maintenance (technical corrections) of earlier GSM Releases and the future GSM evolution of those specifications affected should be the prime responsibility of one Technical Body.

To avoid duplication of work, further GSM evolution (GSM R99 onwards) should be incorporated into the 3rd Generation Core Network specifications as GSM specific parts if necessary. Note that the evolution of the GSM Radio access specifications, MS test specifications and BSS test specifications, are for the most part, unaffected by the 3rd Generation evolution.

The way forward:

- TSG WGs and corresponding SMG STCs co-locate meetings as much as possible.
- GSM Specifications modified in anyway for the 3rd Generation system are transferred to the 3GPP.
- The 3GPP produce a complete set of 3rd Generation "R99" specifications.
- Prime responsibility for maintenance of all previous releases of the Specifications is transferred to and carried out by 3GPP TSG.
- All relevant SMG e-mail lists are advised of all CRs to <R99 specifications prior to TSG approval (if possible and if meeting timing permits).
- SMG approve all modifications (TSG CRs) to earlier releases of the GSM specifications, which are ETSI deliverables, if necessary by correspondence, following the co-located TSG Plenary meetings.
- SMG reviews all modifications (TSG CRs) to R99 and later releases of the 3GPP specifications which impact on GSM, if necessary by correspondence, following approval at the co-located TSG

Plenary meetings, and provides comments if necessary back to the TSG meetings.

- All GSM R99 versions of specifications transferred to 3GPP becoming part of the 3rd Generation specifications R99, are deleted. The remaining GSM specifications will continue to be maintained and developed within SMG. The specifications transferred at TSG#3, proposed for future transfer and those which should remain in SMG only are listed in Annex A. The provisional list given in annex A should be further elaborated and reviewed by SMG STCs and TSG WGs in detail. In general, the specifications remaining in SMG include:
 - 05 series GSM Radio Aspects and specifications linked to or directly related the GSM Radio.
 - GSM Security Specifications (to be confirmed)
 - Non-AMR GSM 06 series (the AMR specifications may require specific GSM and 3G handling which will need to be further elaborated by SA3 and SMG11)
 - Most of GSM 11 series (to be confirmed)
- 3rd Generation specifications may contain GSM R99 Specific parts e.g. 29.002.
- The GSM specifications CR database(s) and GSM status lists are maintained.
- Current versions of all Releases <99 and the specifications only relevant for GSM are maintained on the SMG ftp site.
- ETSI SMG approves the 3rd Generation specifications that are released to the Partner Organisations (POs), which are appropriate and necessary to become ETSI deliverables.
- ETSI SMG decide the ETSI deliverable type (EN, TS etc) of the 3rd Generation specifications approved by SMG.
- ETSI SMG provide only a replacement cover, Foreword and History to the 3rd Generation specifications, leaving the 3GPP version number intact.
- SMG provide ETSI Public Enquiry approval procedure comments on 3rd Generation specifications to the appropriate 3GPP TSGs.
- These principles apply after SMG#29 (if SMG#29 and TSG#4 agree) and following GSM R98.

Annex A

Specifications and equivalent GSM versions transferred from SMG to the TSGs at TSG#3
