Title : Status report for Release 99 and Release 4 specifications from RAN WG4

1 Introduction

This document contains the status report of the release 99 and release 4 specifications in ownership of 3GPP TSG RAN WG4 at RAN#14.

There was one RAN WG4 meeting after the last RAN meeting in Kyoto. There was the usual number of delegates (around 100), and group handled the highest number of documents ever (522 tdocs). Regarding corrections to the BTS and UE release 99 specifications, 54 CRs for essential correction were agreed on. As for release 4 specifications, 75 CRs were agreed (54 Category A). 56 CRs were agreed for Release 5 specifications (33 Category A). There will be two WG meetings before the next plenary.

The following table contains the status for each report or specification from RAN WG4

2 Items that require actions from RAN plenary

TSG RAN asks the WGs to ensure that an accurate "isolated impact" analysis was presented for each CR. TSG RAN also asked to reduce the number of clarification CRs. WG4 has had special care on both issues, in particular no clarification CRs were accepted to Rel99 and Rel4 specifications.

The issue highlighted in **RP-010808 (R2-012772)** was studied with and CRs to 25.133 are presented (CRs 259, 260, 261).

3 25.101

3.1 Status of the document

- Corrections
 - All CRs are essential clarifications without which it would be possible to misinterpret the specifications. After discussions lasting for several meetings, an agreement was reached on the definition of the power measurements. Parallel corrections are proposed for 25.104 and 25.141.
- Remaining issues
 - None known

5 25.104

5.1 Status of the document

- Corrections

- All CRs are essential clarifications without which it would be possible to misinterpret the specifications. The SSDT requirements for the BS are removed, in accordance with RAN#14 decision. The test cases are also removed from 25.141.
- Remaining issues
 - None known

5.2 Change Requests presented for approval (Rel99 Cat F & corresponding Rel-4, Rel-5 Cat A)

6 25.105

6.1 Status of the document

- Corrections
 - All CRs are essential clarifications without which it would be possible to misinterpret the specifications. The requirements for multi carrier operation were missing. The CRs presented introduce these requirements, already present in the FDD specification and also required for regulatory reasons.
- Remaining issues
 - None known

7 25.106

7.1 Status of the document

- Remaining issues

The definition of Repeater in 25.106 is objected. It includes the concept of "conducted repeater", that is heavily objected since it could be used to relax the requirements of the BS amplifiers. It was also noted that some of the requirements on emissions necessary for regulatory purposes are missing in the specification. WG4 couldn't reach an agreement on these issues, although possible ways forward were identified

7.2 Change Requests presented for approval

None.

8 25.113

8.1 Status of the document

Document is stable and complete.

8.2 Change Requests presented for approval

None

9 25.123

9.1 Status of the document

Work since last RAN meeting

- Introduction of missing test cases.
- Various corrections.

Work not completed

- Due to the recent instability of this specification RAN 4 should expect some more corrections in the next meeting.

10.1 Status of the document

Work since last RAN meeting

- Corrections to cell reselection requirements, RRC connection re-establishment requirements, inter frequency measurements.
- Corrections of test cases.

Work not completed

- Due to the recent instability of this specification RAN 4 should expect some more corrections in the next meeting.
- The GPS code phase measurement requirements and test were first presented, but WG4 believes that this topic will not be solved before September.

11.1 Status of the document

- Corrections
 - All CRs are essential clarifications without which it would be possible to misinterpret the specifications.
- Remaining issues
 - CRs 195, 196 & 197 were agreed at WG4 meeting as they are presented in RP-020024. However, after WG4 meeting there was an email discussion concluding that these CRs needs to be revised; it is unclear in one of the clauses what the test requirements are. Document RP-020115 proposes revised versions of these CRs removing the ambiguity.
 - It was proposed to add the test case for the UTRAN measurement Transmitted Carrier Power. WG4 had agreed long time ago not to add test cases for UTRAN measurements, but it seems that there are opposed positions now. WG4 would like to ask RAN for guidance.
