CHANGE REQUEST

25.306 CR 061 # rev - # Current version: 5.3.0

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

Proposed change affects: UICC apps # ME Radio Access Network Core Network

Title:	# Network Assisted Cell Change from UTRAN to GERAN	
Source:	# TSG-RAN WG2	
Work item code:	# TE15	Date: # 17/02/2003
Category:	# B Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900 .	Release: # Rel-5 Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

Reason for change:	# As NACC is an optional feature in the UE, it is necessary for the UTRAN to know whether or not the UE supports the NACC feature. This will prevent the UTRAN from including GERAN SI or PSI to the UE in the CELL CHANGE ORDER FROM UTRAN message when it is not necessary.
Summary of change:	# This provides provides a feature in line with NACC in GERAN that is used in order to speed up the transition from CELL_DCH in UTRAN to GERAN.
Consequences if not approved:	# If this CR is not approved, and the UTRAN supports NACC, GERAN SI/PSI will be sent in every CELL CHANGE ORDER FROM UTRAN message to the UE. This will cause unnecessary signalling load on the downlink if the UE doesn't support the feature.

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked # contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

CHANGE REQUEST

25.306 CR 062 # rev - # Current version: 5.3.0

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

Proposed change affects: UICC apps # ME Radio Access Network Core Network

Title:	# Modification to the number of soft channel bits required for HS-DSCH (TDD)	
Source:	# TSG-RAN WG2	
Work item code:	# HSDPA-L23	Date: # 20/02/2003
Category:	# F Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900 .	Release: # REL-5 Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

Reason for change:	# RAN WG1 has agreed tightened timing requirements and it is now apparent that 3.84Mcps TDD HSDPA can operate successfully with 3 parallel HARQ processes rather than the 4 processes that have been previously assumed.
Summary of change:	# The number of soft channel bits has been reduced in the table for 3.84 Mcps TDD HS-DSCH physical channel categories in order to align with the requirement that only 3 parallel HARQ processes are required.
Consequences if not approved:	# Unnecessarily large memory requirements will be assumed for HS-DSCH in 3.84 Mcps TDD. Isolated impact analysis: This CR has limited impact for 3.84 Mcps TDD only (R5). It affects the requirement categories for UE soft channel bit memory.

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked  contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.
