# CHANGE REQUEST

⌘ **25.101 CR 207** ⌘ rev **1** ⌘ Current version: **3.12.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	⌘ Tx/Rx frequency separation		
<b>Source:</b>	⌘ RAN WG4		
<b>Work item code:</b>	⌘ TEI	<b>Date:</b>	⌘ 04/03/2003
<b>Category:</b>	⌘ <b>F</b>	<b>Release:</b>	⌘ R99
	Use <u>one</u> of the following categories: <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

<b>Reason for change:</b>	⌘ In TS 25.331 the duplex distance has been signalled as 190 MHz, 174.8-205.2 MHz and 134.8-245.2 MHz. Now when several bands are specified with different duplex distances these values are wrong for the other frequency bands. Instead they have changed the signalling to "Default", "Medium Range" and "Full Range" and refer to TS 25.101. This must be reflected in 25.101 for the reference.
<b>Summary of change:</b>	⌘ The current specified Tx/Rx frequency separation is referred as DEFAULT .
<b>Consequences if not approved:</b>	⌘ The reference in TS 25.331 would be wrong
	<b>Isolated Impact Analysis:</b> No Isolated Impact

<b>Clauses affected:</b>	⌘ 2, 5.3

## 5.3 TX–RX frequency separation

(a) UTRA/FDD is designed to operate with the following [DEFAULT](#) TX-RX frequency separation

**Table 5.0: TX-RX frequency separation**

<b>Frequency Band</b>	<b><a href="#">DEFAULT</a> TX-RX frequency separation</b>
For operation in frequency band as defined in subclause 5.2 (a)	190 MHz
For operation in frequency band as defined in subclause 5.2 (b)	80 MHz.

(b) UTRA/FDD can support both fixed and variable transmit to receive frequency separation.

(c) The use of other transmit to receive frequency separations in existing or other frequency bands shall not be precluded.

Madrid, Spain 17 - 22 February, 2003

<b>Operating Band</b>	<b><a href="#">DEFAULT</a> TX-RX frequency separation</b>
I	190 MHz
II	80 MHz.
III	95 MHz.

- b) UTRA/FDD can support both fixed and variable transmit to receive frequency separation.
- c) The use of other transmit to receive frequency separations in existing or other frequency bands shall not be precluded.

## CHANGE REQUEST

⌘ **25.306 CR 058** ⌘ rev **1** ⌘ Current version: **3.7.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	⌘ Variable Tx/Rx frequency separation in 1800 and 1900 band		
<b>Source:</b>	⌘ TSG-RAN WG2		
<b>Work item code:</b>	⌘ TEI	<b>Date:</b>	⌘ Feb 2003
<b>Category:</b>	⌘ <b>F</b>	<b>Release:</b>	⌘ R99
	<p>Use <u>one</u> of the following categories:</p> <p><b>F</b> (correction)</p> <p><b>A</b> (corresponds to a correction in an earlier release)</p> <p><b>B</b> (addition of feature),</p> <p><b>C</b> (functional modification of feature)</p> <p><b>D</b> (editorial modification)</p> <p>Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a>.</p>		<p>Use <u>one</u> of the following releases:</p> <p>2 (GSM Phase 2)</p> <p>R96 (Release 1996)</p> <p>R97 (Release 1997)</p> <p>R98 (Release 1998)</p> <p>R99 (Release 1999)</p> <p>Rel-4 (Release 4)</p> <p>Rel-5 (Release 5)</p> <p>Rel-6 (Release 6)</p>

<b>Reason for change:</b>	⌘ Variable duplex is signalled with the IE "Tx/Rx frequency separation". However, the value range for this IE is only done taken the 2100 MHz band into account. This means that the current values for of Tx/Rx frequency separation has no meaning for the 1800 MHz or 1900 MHz band.
<b>Summary of change:</b>	<p>⌘ 1. The value range of the IE "Tx/Rx frequency separation" is changed to "default", "medium variable" and "full variable".</p> <p>2. An extra sentence is added to parameter "Tx/Rx frequency separation" and "UE power class" to reflect that this is per frequency band. This is aligning with current signalling in 25.331.</p> <p>Isolated impact analysis: The CR is a clarification on a function that is ambiguous and incomplete in the current specification. For a 2100 MHz UE there is no difference if this CR is implemented or not. The behaviour will also be the same independent if UTRAN have implemented the CR or not. For a 1800 MHz or 1900 MHz UE this CR should be implemented in order for correct understanding of the signalled UE capability. This is independent if the UE is capable of variable duplex or not. In addition a UTRAN supporting 1800 MHz or 1900 MHz UEs should implement this CR in order to correctly understand what variable duplex capability the UE is signalling.</p>
<b>Consequences if not approved:</b>	⌘ Signaling of the UE capability Tx/Rx frequency separation for 1800 MHz and 1900 MHz is not possible and has no clear meaning.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 4.5.7 RF parameters

### UE power class

Indicates the UE power class as defined in [4] for FDD and [5] for TDD. [There are separate parameters for each frequency band.](#)

### Radio frequency bands

This parameter is only applicable for TDD. It defines the uplink and downlink frequency bands supported by the UE as defined in [5].

### Tx/Rx frequency separation

This parameter is only applicable for FDD and only if the UE is operating in frequency band a as defined in [4]. It defines the uplink/downlink frequency separations supported by the UE. [There are separate parameters for each frequency band.](#)

### Chip rate capability

This parameter is only applicable for TDD. It defines the chip rates supported by the UE.

## 5.1 Value ranges

**Table 5.1: UE radio access capability parameter value ranges**

		UE radio access capability parameter	Value range
PDCP parameters		Support for RFC 2507	Yes/No
		Support for loss-less SRNS relocation	Yes/No
		Maximum header compression context space	512, 1024, 2048, 4096, 8192 bytes
RLC parameters		Total RLC AM buffer size	2, 10, 50, 100, 150, 500, 1000 kBytes
		Maximum number of AM entities	3, 4, 5, 6, 8, 16, 30
		Maximum RLC AM window size	2047, 4095
PHY parameters	Transport channel parameters in downlink	Maximum sum of number of bits of all transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum sum of number of bits of all convolutionally coded transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum sum of number of bits of all turbo coded transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum number of simultaneous transport channels	4, 8, 16, 32
		Maximum number of simultaneous CCTrCH	1, 2, 3, 4, 5, 6, 7, 8
		Maximum total number of transport blocks received within TTIs that end within the same 10 ms interval	4, 8, 16, 32, 48, 64, 96, 128, 256, 512
		Maximum number of TFC	16, 32, 48, 64, 96, 128, 256, 512, 1024
		Maximum number of TF	32, 64, 128, 256, 512, 1024
		Support for turbo decoding	Yes/No
		Transport channel parameters in	Maximum sum of number of bits of all transport blocks being transmitted at an arbitrary time instant

		UE radio access capability parameter	Value range	
	uplink	Maximum sum of number of bits of all convolutionally coded transport blocks being transmitted at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840	
		Maximum sum of number of bits of all turbo coded transport blocks being transmitted at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840	
		Maximum number of simultaneous transport channels	2, 4, 8, 16, 32	
		Maximum number of simultaneous CCTrCH of DCH type (TDD only)	1, 2, 3, 4, 5, 6, 7, 8	
		Maximum total number of transport blocks transmitted within TTIs that start at the same time	2, 4, 8, 16, 32, 48, 64, 96, 128, 256, 512	
		Maximum number of TFC	4, 8, 16, 32, 48, 64, 96, 128, 256, 512, 1024	
		Maximum number of TF	32, 64, 128, 256, 512, 1024	
		Support for turbo encoding	Yes/No	
	FDD Physical channel parameters in downlink	Maximum number of DPCH/PDSCH codes to be simultaneously received	1, 2, 3, 4, 5, 6, 7, 8	
		Maximum number of physical channel bits received in any 10 ms interval (DPCH, PDSCH, S-CCPCH)	600, 1200, 2400, 3600, 4800, 7200, 9600, 14400, 19200, 28800, 38400, 48000, 57600, 67200, 76800	
		Support for SF 512	Yes/No	
		Support of PDSCH	Yes/No	
		Simultaneous reception of SCCPCH and DPCH	Yes/No	
		Simultaneous reception of SCCPCH, DPCH and PDSCH	Yes/No	
		Maximum number of simultaneous S-CCPCH radio links	1 NOTE: Only the value 1 is part of this release of the specification	
		Support of dedicated pilots for channel estimation	Yes/No	
	FDD Physical channel parameters in uplink	Maximum number of DPDCH bits transmitted per 10 ms	600, 1200, 2400, 4800, 9600, 19200, 28800, 38400, 48000, 57600	
		Support of PCPCH	Yes/No	
		TDD physical channel parameters in downlink	Maximum number of timeslots per frame	1..14
			Maximum number of physical channels per frame	1, 2, 3..224
			Minimum SF	16, 1
Support of PDSCH			Yes/No	
Maximum number of physical channels per timeslot			1..16	
TDD physical channel parameters in uplink		Maximum Number of timeslots per frame	1..14	
		Maximum number of physical channels per timeslot	1, 2	
		Minimum SF	16, 8, 4, 2, 1	
		Support of PUSCH	Yes/No	

		UE radio access capability parameter	Value range
RF parameters	FDD RF parameters	UE power class	3, 4 NOTE: Only power classes 3 and 4 are part of this release of the specification
		Tx/Rx frequency separation	<del>190 MHz default</del> <del>174.8 MHz to 205.2 MHz medium variable</del> <del>134.8 MHz to 245.2 MHz full variable</del>
RF parameters	TDD RF parameters	UE power class	2, 3 NOTE: Only power classes 2 and 3 are part of this release of the specification
		Radio frequency bands	a), b), c), a+b), a+c), a+b+c)
		Chip rate capability	3.84, 1.28
Multi-mode related parameters		Support of UTRA FDD/TDD	FDD, TDD, FDD+TDD
Multi-RAT related parameters		Support of GSM	Yes/No (per GSM frequency band)
		Support of multi-carrier	Yes/No
Security parameters		Support of ciphering algorithm UEA0	Yes
		Support of ciphering algorithm UEA1	Yes
		Support of integrity protection algorithm UIA1	Yes
UE positioning related parameters		Standalone location method(s) supported	Yes/No
		Network assisted GPS support	Network based / UE based / Both / None
		GPS reference time capable	Yes/No
		Support for IPDL	Yes/No
		Support for OTDOA UE based method	Yes/No
		Support for Rx-Tx time difference type 2 measurement	Yes/No
Measurement related capabilities		Need for downlink compressed mode	Yes/No (per frequency band, UTRA mode and RAT)
		Need for uplink compressed mode	Yes/No (per frequency band, UTRA mode and RAT)
General capabilities		Access Stratum release indicator	R99

### 5.2.1 Combinations of common UE Radio Access Parameters for UL and DL

NOTE: Measurement-related capabilities are not included in the combinations. These capabilities are independent from the supported RABs.

**Table 5.2.1.1: UE radio access capability parameter combinations, parameters common for UL and DL**

Reference combination of UE Radio Access capability parameters common for UL and DL	32kbps class	64kbps class	128 kbps class	384 kbps class	768 kbps class	2048 kbps class
<b>PDCP parameters</b>						
Support for RFC 2507	No	No/Yes NOTE 1				
Support for loss-less SRNS relocation	No/Yes NOTE 1					
Maximum header compression context space	Not applicable for conformance testing					
<b>RLC parameters</b>						

Reference combination of UE Radio Access capability parameters common for UL and DL	32kbps class	64kbps class	128 kbps class	384 kbps class	768 kbps class	2048 kbps class
Total RLC AM buffer size (kbytes)	10	10	50	50	100	500
Maximum number of AM entities	4	4	5	6	8	8
Maximum RLC AM window size	2047/4095 NOTE 1	2047/4095 NOTE 1	2047/4095 NOTE 1	2047/4095 NOTE 1	2047/4095 NOTE 1	2047/4095 NOTE 1

Tx/Rx frequency separation	190 MHz default					
<b>RF parameters for TDD</b>						
Radio frequency bands	A / b / c / a+b / a+c / b+c / a+b+c NOTE 1					
Chip rate capability	1.28 / 3.84 Mchip/s NOTE 1					
UE power class	2 / 3 NOTE 1					

NOTE 1: Options represent different combinations that should be supported with Conformance Tests.

## CHANGE REQUEST

# **25.306 CR 059** # rev **1** # Current version: **4.6.0** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps#  ME  Radio Access Network  Core Network

<b>Title:</b>	# Variable Tx/Rx frequency separation in 1800 and 1900 band		
<b>Source:</b>	# TSG-RAN WG2		
<b>Work item code:</b>	# TEI	<b>Date:</b>	# Feb 2003
<b>Category:</b>	# <b>A</b>	<b>Release:</b>	# Rel-4
	<p>Use <u>one</u> of the following categories:</p> <p><b>F</b> (correction)</p> <p><b>A</b> (corresponds to a correction in an earlier release)</p> <p><b>B</b> (addition of feature),</p> <p><b>C</b> (functional modification of feature)</p> <p><b>D</b> (editorial modification)</p> <p>Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a>.</p>		<p>Use <u>one</u> of the following releases:</p> <p>2 (GSM Phase 2)</p> <p>R96 (Release 1996)</p> <p>R97 (Release 1997)</p> <p>R98 (Release 1998)</p> <p>R99 (Release 1999)</p> <p>Rel-4 (Release 4)</p> <p>Rel-5 (Release 5)</p> <p>Rel-6 (Release 6)</p>

<b>Reason for change:</b>	# Variable duplex is signalled with the IE "Tx/Rx frequency separation". However, the value range for this IE is only done taken the 2100 MHz band into account. This means that the current values for of Tx/Rx frequency separation has no meaning for the 1800 MHz or 1900 MHz band.
<b>Summary of change:</b>	<p>1. The value range of the IE "Tx/Rx frequency separation" is changed to "default", "medium variable" and "full variable".</p> <p>2. An extra sentence is added to parameter "Tx/Rx frequency separation" and "UE power class" to reflect that this is per frequency band. This is aligning with current signalling in 25.331.</p> <p>Isolated impact analysis: The CR is a clarification on a function that is ambiguous and incomplete in the current specification. For a 2100 MHz UE there is no difference if this CR is implemented or not. The behaviour will also be the same independent if UTRAN have implemented the CR or not. For a 1800 MHz or 1900 MHz UE this CR should be implemented in order for correct understanding of the signalled UE capability. This is independent if the UE is capable of variable duplex or not. In addition a UTRAN supporting 1800 MHz or 1900 MHz UEs should implement this CR in order to correctly understand what variable duplex capability the UE is signalling.</p>
<b>Consequences if not approved:</b>	# Signaling of the UE capability Tx/Rx frequency separation for 1800 MHz and 1900 MHz is not possible and has no clear meaning.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 4.5.7 RF parameters

### UE power class

Indicates the UE power class as defined in [4] for FDD and [5] for TDD. [There are separate parameters for each frequency band.](#)

### Radio frequency bands

This parameter is only applicable for TDD. It defines the uplink and downlink frequency bands supported by the UE as defined in [5].

### Tx/Rx frequency separation

This parameter is only applicable for FDD and only if the UE is operating in frequency band a as defined in [4]. It defines the uplink/downlink frequency separations supported by the UE. [There are separate parameters for each frequency band.](#)

## 5.1 Value ranges

**Table 5.1: UE radio access capability parameter value ranges**

		UE radio access capability parameter	Value range
PDCP parameters		Support for RFC 2507	Yes/No
		Support for RFC 3095	Yes/No
		Support for loss-less SRNS relocation	Yes/No
		Maximum header compression context space	512, 1024, 2048, 4096, 8192 bytes
		Maximum number of ROHC context sessions	2, 4, 8, 12, 16, 24, 32, 48, 64, 128, 256, 512, 1024, 16384
		Support for Reverse Decompression	Not supported, 1..65535
RLC parameters		Total RLC AM buffer size	2, 10, 50, 100, 150, 500, 1000 kBytes
		Maximum number of AM entities	3, 4, 5, 6, 8, 16, 30
		Maximum RLC AM window size	2047, 4095
PHY parameters	Transport channel parameters in downlink	Maximum sum of number of bits of all transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum sum of number of bits of all convolutionally coded transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum sum of number of bits of all turbo coded transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum number of simultaneous transport channels	4, 8, 16, 32
		Maximum number of simultaneous CCTrCH	1, 2, 3, 4, 5, 6, 7, 8
		Maximum total number of transport blocks received within TTIs that end within the same 10 ms interval	4, 8, 16, 32, 48, 64, 96, 128, 256, 512
		Maximum number of TFC	16, 32, 48, 64, 96, 128, 256, 512, 1024
		Maximum number of TF	32, 64, 128, 256, 512, 1024
		Support for turbo decoding	Yes/No
	Transport channel parameters in	Maximum sum of number of bits of all transport blocks being transmitted at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840

		UE radio access capability parameter	Value range	
	uplink	Maximum sum of number of bits of all convolutionally coded transport blocks being transmitted at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840	
		Maximum sum of number of bits of all turbo coded transport blocks being transmitted at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840	
		Maximum number of simultaneous transport channels	2, 4, 8, 16, 32	
		Maximum number of simultaneous CCTrCH of DCH type (TDD only)	1, 2, 3, 4, 5, 6, 7, 8	
		Maximum total number of transport blocks transmitted within TTIs that start at the same time	2, 4, 8, 16, 32, 48, 64, 96, 128, 256, 512	
		Maximum number of TFC	4, 8, 16, 32, 48, 64, 96, 128, 256, 512, 1024	
		Maximum number of TF	32, 64, 128, 256, 512, 1024	
		Support for turbo encoding	Yes/No	
FDD Physical channel parameters in downlink	FDD Physical channel parameters in downlink	Maximum number of DPCH/PDSCH codes to be simultaneously received	1, 2, 3, 4, 5, 6, 7, 8	
		Maximum number of physical channel bits received in any 10 ms interval (DPCH, PDSCH, S-CCPCH)	600, 1200, 2400, 3600, 4800, 7200, 9600, 14400, 19200, 28800, 38400, 48000, 57600, 67200, 76800	
		Support for SF 512	Yes/No	
		Support of PDSCH	Yes/No	
		Simultaneous reception of SCCPCH and DPCH	Yes/No	
		Simultaneous reception of SCCPCH, DPCH and PDSCH	Yes/No	
		Maximum number of simultaneous S-CCPCH radio links	1 NOTE: Only the value 1 is part of this release of the specification	
		Support of dedicated pilots for channel estimation	Yes/No	
	FDD Physical channel parameters in uplink	FDD Physical channel parameters in uplink	Maximum number of DPDCH bits transmitted per 10 ms	600, 1200, 2400, 4800, 9600, 19200, 28800, 38400, 48000, 57600
			Support of PCPCH	Yes/No
	TDD 3.84 Mcps physical channel parameters in downlink	TDD 3.84 Mcps physical channel parameters in downlink	Maximum number of timeslots per frame	1..14
			Maximum number of physical channels per frame	1, 2, 3..224
			Minimum SF	16, 1
			Support of PDSCH	Yes/No
			Maximum number of physical channels per timeslot	1..16
	TDD 3.84 Mcps physical channel parameters in uplink	TDD 3.84 Mcps physical channel parameters in uplink	Maximum Number of timeslots per frame	1..14
			Maximum number of physical channels per timeslot	1, 2
			Minimum SF	16, 8, 4, 2, 1
			Support of PUSCH	Yes/No
	TDD 1.28 Mcps physical channel parameters in downlink	TDD 1.28 Mcps physical channel parameters in downlink	Maximum number of timeslots per subframe	1..6
			Maximum number of physical channels per subframe	1, 2, 3, ..., 96
			Minimum SF	16, 1
			Support of PDSCH	Yes/No
			Maximum number of physical channels per timeslot	1..16
			Support 8PSK	Yes/No
	TDD 1.28 Mcps physical channel	TDD 1.28 Mcps physical channel	Maximum number of timeslots per subframe	1..6

		UE radio access capability parameter	Value range
	parameters in uplink	Maximum number of physical channels per timeslot	1, 2
		Minimum SF	16, 8, 4, 2, 1
		Support of 8PSK	Yes/No
		Support of PUSCH	Yes/No
RF parameters	FDD RF parameters	UE power class	3, 4 NOTE: Only power classes 3 and 4 are part of this release of the specification
		Tx/Rx frequency separation	<del>190 MHz</del> default <del>174.8 MHz to 205.2 MHz</del> medium variable <del>134.8 MHz to 245.2 MHz</del> full variable
RF parameters	TDD 3.84 Mcps RF parameters	UE power class	2, 3 NOTE: Only power classes 2 and 3 are part of this release of the specification
		Radio frequency bands	a), b), c), a+b), a+c), b+c), a+b+c)
	TDD 1.28 Mcps RF parameters	UE power class	2, 3
		Radio frequency bands	a), b), c), a+b), a+c), b+c), a+b+c)
Multi-mode related parameters		Support of UTRA FDD	Yes/No
		Support of UTRA TDD 3.84 Mcps	Yes/No
		Support of UTRA TDD 1.28 Mcps	Yes/No
Multi-RAT related parameters		Support of GSM	Yes/No (per GSM frequency band)
		Support of multi-carrier	Yes/No
Security parameters		Support of ciphering algorithm UEA0	Yes
		Support of ciphering algorithm UEA1	Yes
		Support of integrity protection algorithm UIA1	Yes
UE positioning related parameters		Standalone location method(s) supported	Yes/No
		Network assisted GPS support	Network based / UE based / Both/ None
		GPS reference time capable	Yes/No
		Support for IPDL	Yes/No
		Support for OTDOA UE based method	Yes/No
		Support for Rx-Tx time difference type 2 measurement	Yes/No
		Support for UE Positioning measurement validity in CELL_PCH and URA_PCH RRC states	Yes/No
Measurement related capabilities		Need for downlink compressed mode	Yes/No (per frequency band, UTRA mode and RAT)
		Need for uplink compressed mode	Yes/No (per frequency band, UTRA mode and RAT)
General capabilities		Access Stratum release indicator	R99, REL-4

## 5.2.1 Combinations of common UE Radio Access Parameters for UL and DL

NOTE: Measurement-related capabilities are not included in the combinations. These capabilities are independent from the supported RABs.

**Table 5.2.1.1: UE radio access capability parameter combinations, parameters common for UL and DL**

Reference combination of UE Radio Access capability parameters common for UL and DL	32 kbps class	64 kbps class	128 kbps class	384 kbps class	768 kbps class	2048 kbps class
PDCP parameters						

Reference combination of UE Radio Access capability parameters common for UL and DL	32 kbps class	64 kbps class	128 kbps class	384 kbps class	768 kbps class	2048 kbps class
Support for RFC 2507	No	No/Yes NOTE 1				
Support for RFC 3095	No/Yes NOTE 1	No/Yes NOTE 1	No/Yes NOTE 1	No/Yes NOTE 1	No/Yes NOTE 1	No/Yes NOTE 1
Support for loss-less SRNS relocation	No/Yes NOTE 1					
Maximum header compression context space	Not applicable for conformance testing					
Maximum number of ROHC context sessions	Not applicable for conformance testing					
Support for Reverse Decompression	No/Yes NOTE 1					
<b>RLC parameters</b>						
Total RLC AM buffer size (kbytes)	10	10	50	50	100	500
Maximum number of AM entities	4	4	5	6	8	8

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 4.5.7 RF parameters

### UE power class

Indicates the UE power class as defined in [4] for FDD and [5] for TDD. [There are separate parameters for each frequency band.](#)

### Radio frequency bands

This parameter is only applicable for TDD. It defines the uplink and downlink frequency bands supported by the UE as defined in [5].

### Tx/Rx frequency separation

This parameter is only applicable for FDD and only if the UE is operating in frequency band a as defined in [4]. It defines the uplink/downlink frequency separations supported by the UE. [There are separate parameters for each frequency band.](#)

## 5.1 Value ranges

**Table 5.1: UE radio access capability parameter value ranges**

		UE radio access capability parameter	Value range
PDCP parameters		Support for RFC 2507	Yes/No
		Support for RFC 3095	Yes/No
		Support for RFC 3095 context relocation	Yes/No
		Support for loss-less SRNS relocation	Yes/No
		Maximum header compression context space	512, 1024, 2048, 4096, 8192 bytes
		Maximum number of ROHC context sessions	2, 4, 8, 12, 16, 24, 32, 48, 64, 128, 256, 512, 1024, 16384
		Support for Reverse Decompression	Not supported, 1..65535
RLC and MAC-hs parameters		Total RLC AM and MAC-hs buffer size	2, 10, 50, 100, 150, 200, 300, 400, 500, 750, 1000 kBytes
		Maximum number of AM entities	3, 4, 5, 6, 8, 16, 30
		Maximum RLC AM window size	2047, 4095
PHY parameters	Transport channel parameters in downlink	Maximum sum of number of bits of all transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum sum of number of bits of all convolutionally coded transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum sum of number of bits of all turbo coded transport blocks being received at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum number of simultaneous transport channels	4, 8, 16, 32
		Maximum number of simultaneous CCTrCH	1, 2, 3, 4, 5, 6, 7, 8
		Maximum total number of transport blocks received within TTIs that end within the same 10 ms interval	4, 8, 16, 32, 48, 64, 96, 128, 256, 512
		Maximum number of TFC	16, 32, 48, 64, 96, 128, 256, 512, 1024
		Maximum number of TF	32, 64, 128, 256, 512, 1024
		Support for turbo decoding	Yes/No
	Transport channel parameters in	Maximum sum of number of bits of all transport blocks being transmitted at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840

		UE radio access capability parameter	Value range
	uplink	Maximum sum of number of bits of all convolutionally coded transport blocks being transmitted at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum sum of number of bits of all turbo coded transport blocks being transmitted at an arbitrary time instant	640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840
		Maximum number of simultaneous transport channels	2, 4, 8, 16, 32
		Maximum number of simultaneous CCTrCH of DCH type (TDD only)	1, 2, 3, 4, 5, 6, 7, 8
		Maximum total number of transport blocks transmitted within TTIs that start at the same time	2, 4, 8, 16, 32, 48, 64, 96, 128, 256, 512
		Maximum number of TFC	4, 8, 16, 32, 48, 64, 96, 128, 256, 512, 1024
		Maximum number of TF	32, 64, 128, 256, 512, 1024
		Support for turbo encoding	Yes/No
FDD Physical channel parameters in downlink	Maximum number of DPCH/PDSCH codes to be simultaneously received	1, 2, 3, 4, 5, 6, 7, 8	
	Maximum number of physical channel bits received in any 10 ms interval (DPCH, PDSCH, S-CCPCH)	600, 1200, 2400, 3600, 4800, 7200, 9600, 14400, 19200, 28800, 38400, 48000, 57600, 67200, 76800	
	Support for SF 512	Yes/No	
	Support of PDSCH	Yes/No	
	Support of HS-PDSCH	Yes/No	
	Simultaneous reception of SCCPCH and DPCH	Yes/No	
	Simultaneous reception of SCCPCH, DPCH and PDSCH	Yes/No	
	Maximum number of simultaneous S-CCPCH radio links	1 NOTE: Only the value 1 is part of this release of the specification	
	Support of dedicated pilots for channel estimation	Yes	
	Support of dedicated pilots for channel estimation of HS-DSCH	Yes/No	
	FDD Physical channel parameters in uplink	Maximum number of DPDCH bits transmitted per 10 ms	600, 1200, 2400, 4800, 9600, 19200, 28800, 38400, 48000, 57600
		Support of PCPCH	Yes/No
	TDD 3.84 Mcps physical channel parameters in downlink	Maximum number of timeslots per frame	1..14
		Maximum number of physical channels per frame	1, 2, 3..224
Minimum SF		16, 1	
Support of PDSCH		Yes/No	
Support of HS-PDSCH		Yes/No	
Maximum number of physical channels per timeslot		1..16	
TDD 3.84 Mcps physical channel parameters in uplink	Maximum Number of timeslots per frame	1..14	
	Maximum number of physical channels per timeslot	1, 2	
	Minimum SF	16, 8, 4, 2, 1	
	Support of PUSCH	Yes/No	
TDD 1.28 Mcps physical channel parameters in downlink	Maximum number of timeslots per subframe	1..6	
	Maximum number of physical channels per subframe	1, 2, 3, ..., 96	
	Minimum SF	16, 1	
	Support of PDSCH	Yes/No	
	Support of HS-PDSCH	Yes/No	

		UE radio access capability parameter	Value range	
		Maximum number of physical channels per timeslot	1..16	
		Support 8PSK	Yes/No	
		TDD 1.28 Mcps physical channel parameters in uplink	Maximum number of timeslots per subframe	1..6
		Maximum number of physical channels per timeslot	1, 2	
		Minimum SF	16, 8, 4, 2, 1	
		Support of 8PSK	Yes/No	
RF parameters	FDD RF parameters	Support of PUSCH	Yes/No	
		UE power class	3, 4 NOTE: Only power classes 3 and 4 are part of this release of the specification	
		Tx/Rx frequency separation	<del>190 MHz</del> default <del>174.8 MHz to 205.2 MHz</del> medium variable <del>134.8 MHz to 245.2 MHz</del> full variable	
RF parameters	TDD 3.84 Mcps RF parameters	UE power class	2, 3 NOTE: Only power classes 2 and 3 are part of this release of the specification	
		Radio frequency bands	a), b), c), a+b), a+c), b+c), a+b+c)	
	TDD 1.28 Mcps RF parameters	UE power class	2, 3	
		Radio frequency bands	a), b), c), a+b), a+c), b+c), a+b+c)	
Multi-mode related parameters		Support of UTRA FDD	Yes/No	
		Support of UTRA TDD 3.84 Mcps	Yes/No	
		Support of UTRA TDD 1.28 Mcps	Yes/No	
Multi-RAT related parameters		Support of GSM	Yes/No (per GSM frequency band)	
		Support of multi-carrier	Yes/No	
Security parameters		Support of ciphering algorithm UEA0	Yes	
		Support of ciphering algorithm UEA1	Yes	
		Support of integrity protection algorithm UIA1	Yes	
UE positioning related parameters		Standalone location method(s) supported	Yes/No	
		Network assisted GPS support	Network based / UE based / Both/ None	
		GPS reference time capable	Yes/No	
		Support for IPDL	Yes/No	
		Support for OTDOA UE based method	Yes/No	
		Support for Rx-Tx time difference type 2 measurement	Yes/No	
		Support for UE Positioning measurement validity in CELL_PCH and URA_PCH RRC states	Yes/No	
Measurement related capabilities		Need for downlink compressed mode	Yes/No (per frequency band, UTRA mode and RAT)	
		Need for uplink compressed mode	Yes/No (per frequency band, UTRA mode and RAT)	
General capabilities		Access Stratum release indicator	R99, REL-4, REL-5	
DL capabilities with simultaneous HS-DSCH		DL capability with simultaneous HS-DSCH configuration	32 kbps, 64 kbps, 128 kbps, 384 kbps	

### 5.2.1 Combinations of common UE Radio Access Parameters for UL and DL

NOTE: Measurement-related capabilities are not included in the combinations. These capabilities are independent from the supported RABs.

**Table 5.2.1.1: UE radio access capability parameter combinations, parameters common for UL and DL**

Reference combination of UE Radio Access capability parameters common for UL and DL	32 kbps class	64 kbps class	128 kbps class	384 kbps class	768 kbps class	2048 kbps class
<b>PDCP parameters</b>						
Support for RFC 2507	No	No/Yes NOTE 1				
Support for RFC 3095	No/Yes NOTE 1	No/Yes NOTE 1	No/Yes NOTE 1	No/Yes NOTE 1	No/Yes NOTE 1	No/Yes NOTE 1
Support for RFC 3095 context relocation	No/Yes NOTE 1					
Support for loss-less SRNS relocation	No/Yes NOTE 1					
Maximum header compression context space	Not applicable for conformance testing					
Maximum number of ROHC context sessions	Not applicable for conformance testing					
Support for Reverse decompression	No/Yes NOTE 1					
<b>RLC parameters</b>						
Total RLC AM buffer size (kbytes)	10	10	50	50	100	500
Maximum number of AM entities	4	4	5	6	8	8
Maximum RLC AM window size	2047/4095 NOTE 1	2047/4095 NOTE 1	2047/4095 NOTE 1	2047/4095 NOTE 1	2047/4095 NOTE 1	2047/4095 NOTE 1
<b>Multi-mode related parameters</b>						
Support of UTRA FDD	Yes/No NOTE 1					
Support of UTRA TDD 3.84 Mcps	Yes/No NOTE 1					
Support of UTRA TDD 1.28 Mcps	Yes/No NOTE 1					
<b>Multi-RAT related parameters</b>						
Support of GSM	Yes/No NOTE 1					
Support of multi-carrier	Yes/No NOTE 1					
<b>Security parameters</b>						
Support of ciphering algorithm UEA0	Yes					
Support of ciphering algorithm UEA1	Yes					
Support of integrity protection algorithm UIA1	Yes					
<b>UE positioning related parameters</b>						
Standalone location method(s) supported	Yes/No NOTE 1					
Network assisted GPS support	Network based / UE based / Both/ None NOTE 1					
GPS reference time capable	Yes/No NOTE 1					
Support for IPDL	Yes/No NOTE 1					
Support for OTDOA UE based method	Yes/No NOTE 1					
Support for Rx-Tx time difference type 2 measurement	Yes/No NOTE 1					
Support for UE Positioning measurement validity in CELL_PCH and URA_PCH RRC states	Yes/No NOTE 1					
<b>RF parameters for FDD</b>						
UE power class	3 / 4 NOTE 1					
Tx/Rx frequency separation	190-MHz default					
<b>RF parameters for TDD 3.84 Mcps</b>						

Reference combination of UE Radio Access capability parameters common for UL and DL	32 kbps class	64 kbps class	128 kbps class	384 kbps class	768 kbps class	2048 kbps class
Radio frequency bands	A / b / c / a+b / a+c / b+c / a+b+c NOTE 1					
UE power class	2 / 3 NOTE 1					
<b>RF parameters for TDD 1.28 Mcps</b>						
Radio frequency bands	A / b / c / a+b / a+c / b+c / a+b+c NOTE 1					
UE power class	2 / 3 NOTE 1					

NOTE 1: Options represent different combinations that should be supported with Conformance Tests.

## CHANGE REQUEST

# **25.331 CR 1826** # rev **-** # Current version: **3.13.0** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps#  ME  Radio Access Network  Core Network

<b>Title:</b>	# Variable Tx/Rx frequency separation in 1800 and 1900 band		
<b>Source:</b>	# TSG-RAN WG2		
<b>Work item code:</b>	# TEI	<b>Date:</b>	# Feb 2003
<b>Category:</b>	# <b>F</b>	<b>Release:</b>	# R99
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	<b>F</b> (correction)		2 (GSM Phase 2)
	<b>A</b> (corresponds to a correction in an earlier release)		R96 (Release 1996)
	<b>B</b> (addition of feature),		R97 (Release 1997)
	<b>C</b> (functional modification of feature)		R98 (Release 1998)
	<b>D</b> (editorial modification)		R99 (Release 1999)
	Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		Rel-4 (Release 4)
			Rel-5 (Release 5)
			Rel-6 (Release 6)

<b>Reason for change:</b>	# Variable duplex is signalled with the IE "Tx/Rx frequency separation". However, the value range for this IE is only done taken the 2100 MHz band into account. This means that the current values for of Tx/Rx frequency separation has no meaning for the 1800 MHz or 1900 MHz band.
<b>Summary of change:</b>	# <ol style="list-style-type: none"> <li>1. The value range of the IE "Tx/Rx frequency separation" is changed to "default", "medium variable" and "full variable".</li> <li>2. Everything except the reference to 25.101 is removed from the semantics description. Only in 25.101 the explanation of what "default", "medium variable" and "full variable" means for the different bands.</li> </ol> <p>Isolated impact analysis:                  The CR is a clarification on a function that is ambiguous and incomplete in the current specification.                  For a 2100 MHz UE there is no difference if this CR is implemented or not. The behaviour will also be the same independent if UTRAN have implemented the CR or not.                  For a 1800 MHz or 1900 MHz UE this CR should be implemented in order for correct understanding of the signalled UE capability. This is independent if the UE is capable of variable duplex or not.                  In addition a UTRAN supporting 1800 MHz or 1900 MHz UEs should implement this CR in order to correctly understand what variable duplex capability the UE is signalling.</p>
<b>Consequences if not approved:</b>	# Signaling of the UE capability Tx/Rx frequency separation for 1800 MHz and 1900 MHz is not possible and has no clear meaning.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10.3.3.33 RF capability FDD

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
UE power class	MP		Enumerated(1..4)	as defined in [21]
Tx/Rx frequency separation	MP		Enumerated( <del>190</del> default, <del>174.8</del> , <del>205.2</del> medium variable, <del>134.8</del> , <del>245.2</del> full variable)	<del>In-MHz</del> as defined in [21]. <del>NOTE: Not applicable if UE is not operating in frequency band-a (as defined in [21]).</del>

10.3.3.33a RF capability FDD extension

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
UE power class extension	MP		Enumerated(1..4)	as defined in [21]. Four spare values are needed
Tx/Rx frequency separation	MP		Enumerated( <del>190</del> default, <del>174.8</del> , <del>205.2</del> medium variable, <del>134.8</del> , <del>245.2</del> full variable)	<del>In-MHz</del> as defined in [21]. <del>NOTE: Not applicable if UE is not operating in frequency band-a (as defined in [21]).</del>

## CHANGE REQUEST

# 25.331 CR 1827 # rev - # Current version: 4.8.0 #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	# Variable Tx/Rx frequency separation in 1800 and 1900 band		
<b>Source:</b>	# TSG-RAN WG2		
<b>Work item code:</b>	# TEI	<b>Date:</b>	# Feb 2003
<b>Category:</b>	# <b>A</b>	<b>Release:</b>	# Rel-4
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	<b>F</b> (correction)	2	(GSM Phase 2)
	<b>A</b> (corresponds to a correction in an earlier release)	R96	(Release 1996)
	<b>B</b> (addition of feature),	R97	(Release 1997)
	<b>C</b> (functional modification of feature)	R98	(Release 1998)
	<b>D</b> (editorial modification)	R99	(Release 1999)
	Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .	Rel-4	(Release 4)
		Rel-5	(Release 5)
		Rel-6	(Release 6)

<b>Reason for change:</b>	# Variable duplex is signalled with the IE "Tx/Rx frequency separation". However, the value range for this IE is only done taken the 2100 MHz band into account. This means that the current values for of Tx/Rx frequency separation has no meaning for the 1800 MHz or 1900 MHz band.
<b>Summary of change:</b>	# <ol style="list-style-type: none"> <li>The value range of the IE "Tx/Rx frequency separation" is changed to "default", "medium variable" and "full variable".</li> <li>Everything except the reference to 25.101 is removed from the semantics description. Only in 25.101 the explanation of what "default", "medium variable" and "full variable" means for the different bands.</li> </ol> <p>Isolated impact analysis:                  The CR is a clarification on a function that is ambiguous and incomplete in the current specification.                  For a 2100 MHz UE there is no difference if this CR is implemented or not. The behaviour will also be the same independent if UTRAN have implemented the CR or not.                  For a 1800 MHz or 1900 MHz UE this CR should be implemented in order for correct understanding of the signalled UE capability. This is independent if the UE is capable of variable duplex or not.                  In addition a UTRAN supporting 1800 MHz or 1900 MHz UEs should implement this CR in order to correctly understand what variable duplex capability the UE is signalling.</p>
<b>Consequences if not approved:</b>	# Signaling of the UE capability Tx/Rx frequency separation for 1800 MHz and 1900 MHz is not possible and has no clear meaning.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10.3.3.33 RF capability FDD

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
UE power class	MP		Enumerated(1..4)	as defined in [21]	
Tx/Rx frequency separation	MP		Enumerated( <del>190</del> default, <del>174.8</del> , <del>205.2</del> medium variable, <del>134.8</del> , <del>245.2</del> full variable)	<del>In-MHz</del> as defined in [21]. <del>NOTE: Not applicable if UE is not operating in frequency band a (as defined in [21]).</del>	

10.3.3.33a RF capability FDD extension

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
UE power class extension	MP		Enumerated(1..4)	as defined in [21]. Four spare values are needed
Tx/Rx frequency separation	MP		Enumerated( <del>190</del> default, <del>174.8</del> , <del>205.2</del> medium variable, <del>134.8</del> , <del>245.2</del> full variable)	<del>In-MHz</del> as defined in [21]. <del>NOTE: Not applicable if UE is not operating in frequency band a (as defined in [21]).</del>

## CHANGE REQUEST

# 25.331 CR 1828 # rev - # Current version: 5.3.0 #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	# Variable Tx/Rx frequency separation in 1800 and 1900 band		
<b>Source:</b>	# TSG-RAN WG2		
<b>Work item code:</b>	# TEI	<b>Date:</b>	# Feb 2003
<b>Category:</b>	# <b>A</b>	<b>Release:</b>	# Rel-5
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	<b>F</b> (correction)	2	(GSM Phase 2)
	<b>A</b> (corresponds to a correction in an earlier release)	R96	(Release 1996)
	<b>B</b> (addition of feature),	R97	(Release 1997)
	<b>C</b> (functional modification of feature)	R98	(Release 1998)
	<b>D</b> (editorial modification)	R99	(Release 1999)
	Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .	Rel-4	(Release 4)
		Rel-5	(Release 5)
		Rel-6	(Release 6)

<b>Reason for change:</b>	# Variable duplex is signalled with the IE "Tx/Rx frequency separation". However, the value range for this IE is only done taken the 2100 MHz band into account. This means that the current values for of Tx/Rx frequency separation has no meaning for the 1800 MHz or 1900 MHz band.
<b>Summary of change:</b>	# <ol style="list-style-type: none"> <li>1. The value range of the IE "Tx/Rx frequency separation" is changed to "default", "medium variable" and "full variable".</li> <li>2. Everything except the reference to 25.101 is removed from the semantics description. Only in 25.101 the explanation of what "default", "medium variable" and "full variable" means for the different bands.</li> </ol> <p>Isolated impact analysis: The CR is a clarification on a function that is ambiguous and incomplete in the current specification. For a 2100 MHz UE there is no difference if this CR is implemented or not. The behaviour will also be the same independent if UTRAN have implemented the CR or not. For a 1800 MHz or 1900 MHz UE this CR should be implemented in order for correct understanding of the signalled UE capability. This is independent if the UE is capable of variable duplex or not. In addition a UTRAN supporting 1800 MHz or 1900 MHz UEs should implement this CR in order to correctly understand what variable duplex capability the UE is signalling.</p>
<b>Consequences if not approved:</b>	# Signaling of the UE capability Tx/Rx frequency separation for 1800 MHz and 1900 MHz is not possible and has no clear meaning.

<b>Clauses affected:</b>	# 10.3.3.33, 10.3.3.33a, 11.3

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10.3.3.33 RF capability FDD

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
UE power class	MP		Enumerated(1..4)	as defined in [21]	
Tx/Rx frequency separation	MP		Enumerated( <del>190</del> default, <del>174.8</del> , <del>205.2</del> medium variable, <del>134.8</del> , <del>245.2</del> full variable)	<del>In-MHz</del> as defined in [21]. <del>NOTE: Not applicable if UE is not operating in frequency band a (as defined in [21]).</del>	

10.3.3.33a RF capability FDD extension

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
UE power class extension	MP		Enumerated(1..4)	as defined in [21]. Four spare values are needed
Tx/Rx frequency separation	MP		Enumerated( <del>190</del> default, <del>174.8</del> , <del>205.2</del> medium variable, <del>134.8</del> , <del>245.2</del> full variable)	<del>In-MHz</del> as defined in [21]. <del>NOTE: Not applicable if UE is not operating in frequency band a (as defined in [21]).</del>
