TSG-RAN Working Group 1
Dresden, Germany, Nov. 30 – Dec. 3, 1999

TSGR1#9(99)L40

To:	**TSG RAN WG2**
Source:	**TSG RAN WG1**
Title:	**Proposed response for LS on Channel Assignment for CPCH.**

TSG RAN WG1 would like to thank TSG RAN WG2 for the response regarding the channel assignment for CPCH [1].

WG1 discussed schemes for CPCH. But, WG1 couldn't allocate time for the channel assignment issue at this meeting.

WG1 sees some needs for Status Broadcasting for overload control, that is, to reduce the needless access attempt. But, WG1 needs further study on the technical details for status broadcasting including the contents of status information and its additional functions such as improving efficiency of channel selection, which can depend on the conclusion of the channel assignment discussion.

WG1 will inform WG2 of the result of the evaluation of channel assignment from the L1 perspective as soon as it is available. In the meantime, WG1 welcomes any further inputs from WG2 on these issues.
