1. Overall Description:

The PTCRB has determined that there is a need to verify the operation of devices supporting Allocation and Retention Priority (ARP, 3GPP TS 23.401 §4.7.3). Consequently, the PTCRB asked the PVG to investigate the level of testing of this feature in the current 3GPP RAN5 test specifications. Following this investigation, the PVG concluded that additional test case(s) need to be added to 3GPP TS 36.523 to verify that a device correctly supports this feature. Therefore, the PTCRB/PVG kindly requests 3GPP RAN5 to add support for this feature to the appropriate test specification(s).

2. Action(s):

The PTCRB/PVG kindly requests 3GPP RAN5 to add support for Allocation and Retention Priority (ARP, 3GPP TS 23.401 §4.7.3) to the appropriate test specification(s).

3. Date of Next PVG Meetings:

PVG #78 August 30th – 31st, 2017 Shanghai, China
PVG #79 November 15th – 16th, 2017 Washington DC, USA
