## UMTS Forum Focus for Year 2000 and Beyond: Extended Visio

*Antonella Napolitano*

UMTS Forum 3GPP CG Chairperson

## New UMTS Forum Focus

Up to now, the UMTS Forum has concentrated on providing a vision for the UMTS system.

It looked at aspects of the air interface, the radio access network and the core network, according to IMT2000 workplans.

The new focus is a definition of a personal network concept with mobile multimedia services and applications, combining the evolution of existing and emerging services to provide a viable platform well beyond the year 2005.

## Extended Vision

The new concept of personal network has emerged from the convergence of mobile communications, computers and internet.

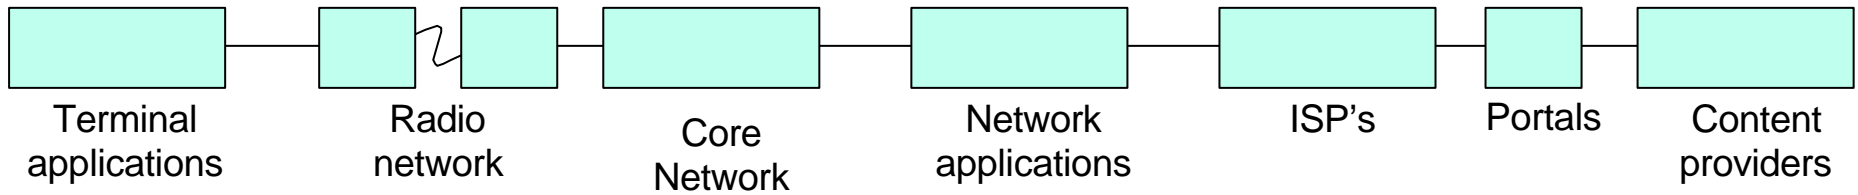

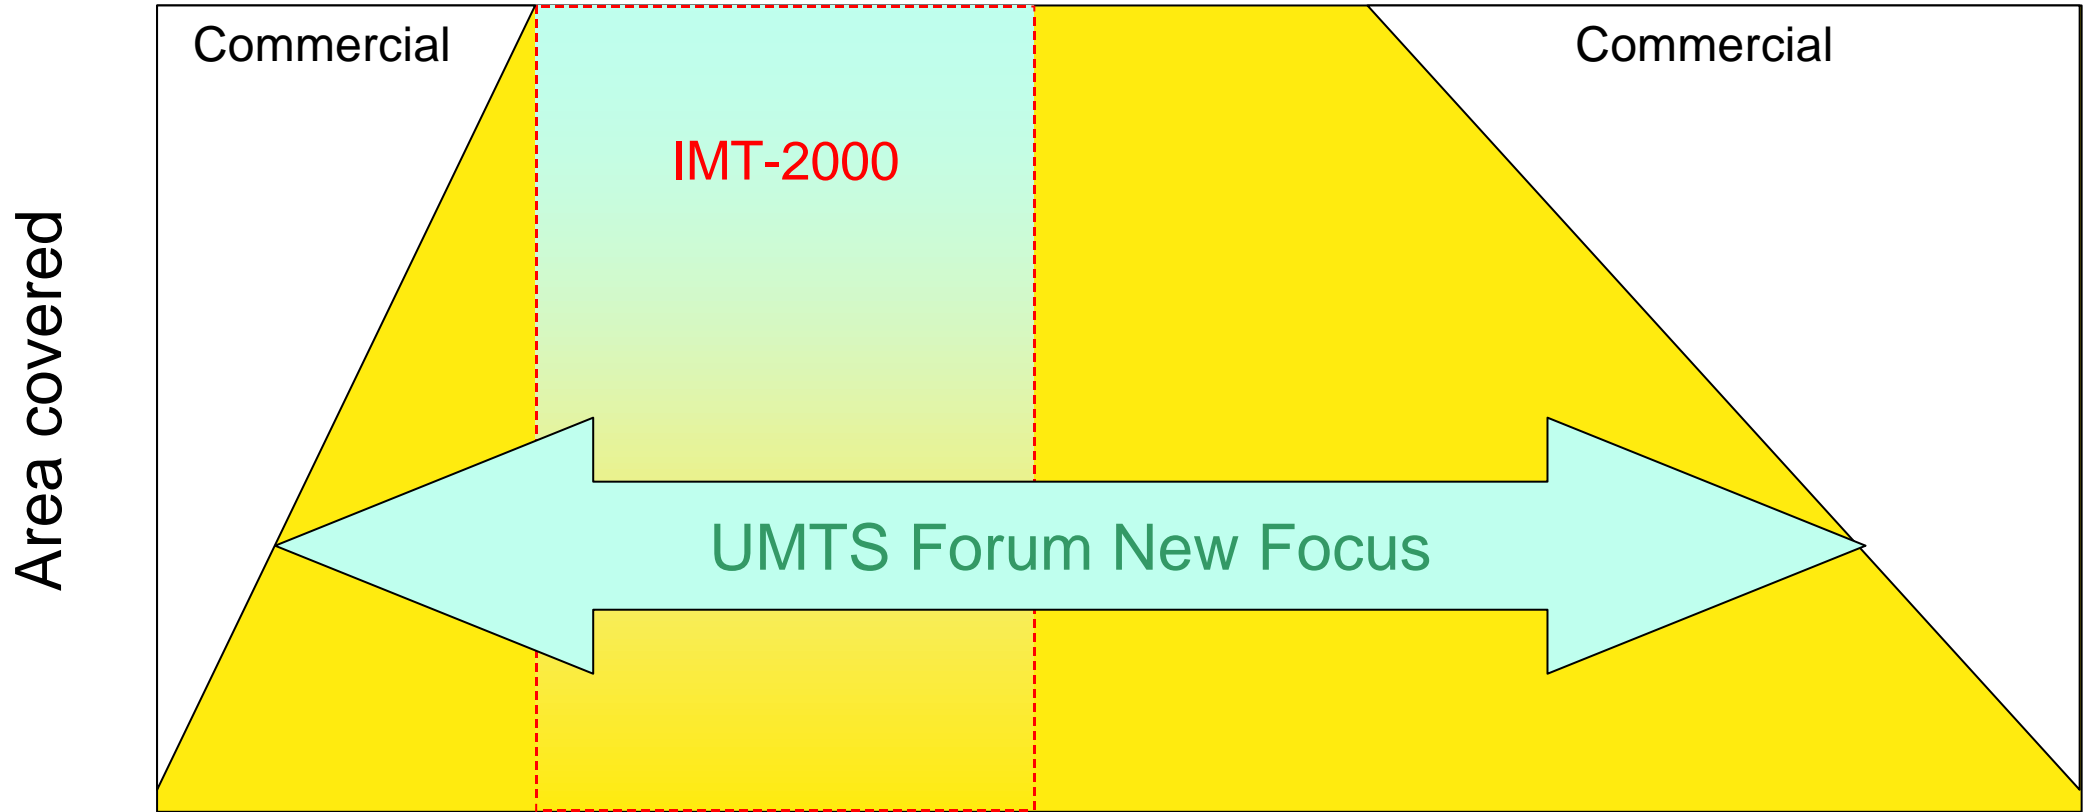

The personal network will include access devices, internet/intranet access, universal network connectivity, content/commerce management tools, i.e. personal portals and personal communications management tools, e.g unified messaging

The personal network will allow users to use any device and network to access the information that they need.

The key characteristics of the personal network are:

Personal portals, sophisticated information management, compelling and personalised content and ease of use.

# Extended Vision

Business chain

## New UMTS Forum Focus

1. New Workplan to consider new roles for UMTS Operators
2. Final Report on UMTS Forum Focus

# New UMTS Forum Focus

## Contributions from UMTS Forum Groups:

**MAG - New Market Study**

**3GPPCG - Extended security and mobility aspects**

**ICTG - Wireless portal definition, internet related issues, service portability**

**RAG - location information - regulatory issues**
