

**Technical Specification Group Services and System Aspects *TSGS#7(00)142*  
Meeting #7, Madrid, Spain, 15-17 March 2000**

**Source:** TSG SA  
**Title:** Response to the liaison from RAN2 on UE radio access capabilities and relation to conformance testing  
**Document for:** Action  
**Agenda Item:** 4.1

TSG SA thank RAN2 for their liaison entitled « UE radio access capabilities and relation to conformance testing »

In this liaison it can be read that “The version of the conformance test specification (TS 34.108) that the UE has declared compliance to is included in the RRC signalling”.

SA tend to disagree with such a concept. As a matter of fact, the equipment shall be designed according to the core specifications. Therefore if it is deemed necessary to transmit on the radio interface detailed data on the features actually supported by the UE, these information shall be described by the necessary references to the core specifications and not by references to the test specifications.

As a consequence TSG SA request RAN2 to reconsider the way the UE capabilities are signalled to the network
