Title: **3GPP specifications status list near end of TSG SA #9**

Document for: **information**

Agenda Item: **9**

Note that the specifications list now includes the GSM specifications inherited from ETSI TC-SMG. The allocation of inherited GSM specifications to TSGs and WGs is based on that presented at TSG-SA#8. No corrections were offered to MCC by the deadline.

The status list is now ordered by Release (in descending order) then specification number. This is intended to give a clearer presentation, with specifications of lower interest appearing towards the end of the table.

Note 1: It is anticipated that a few more change requests will be approved during the later part of SA#9, and the effects of these are not reflected in the present document.

Note 2: The new terminology "Rel-4", "Rel-5" in place of "R2000" has not yet been implemented.

Note 3: The URL column has been omitted, since the specifications resulting from the present meeting are not yet available on the server. The URLs will be reinstated when the new directories are created and the specifications in place.

A new version of the status list will be made available on the Web as soon as possible after the end of the meeting.
