

## **Clarification on CR008 to 22.127 (SP-010164) CR to 22.127 on Clarification to the requirements of the Event Notification Function**

**Source:** Siemens AG<sup>1</sup>  
**Agenda:** 7.1.3.  
**Purpose:** Decision

### **1. Introduction**

This contribution intends to provide background information to support the approval of the above mentioned CR.

### **2. Discussion**

The reason for this CR is to improve the description of the current OSA requirements. As mentioned in the CR the current requirement of the Event Notification Function was not clearly understood by the groups responsible for stage 2 and 3 of OSA. While producing the stage 2 and 3 of OSA the misunderstandings, of course, have been clarified, but on an informal basis only.

However, by not changing the description of the requirements, i.e. keep it vague, it seems as if N5 specified 'something' that haven't been required by S1 at all. Beside this the proposed improvement of requirements were considered when harmonizing 3GPP stage 3 with other bodies, i.e. ETSI SPAN12 and Parlay.

### **3. Proposal**

To provide a consistent set of OSA Specifications in Release 4 the formal alignment is essential. Therefore we propose to approve the referred CR.
