SA3 would like to thank SA5 for their LS on UEM feasibility study (S5-020017). The SA3 response to the actions identified in the LS is given below:

ACTION: SA5 SWG-A asks the T2, T3 and S3 groups to confirm to SA5 SWG-A by 24 February 2002:

1. *That the User Equipment Management Feature, as described in TR 32.802, is feasible for Release 6. In particular see clause 8 in the document which is on UEM Project Planning.*

SA3 response: SA3 acknowledge that it has a role in providing security solutions for UEM in Release 6 and will create a corresponding SA3 work item for the security building block that is proposed in clause 8 of the TR. SA3 would like to note that it may be possible to make use of security solutions developed by the MExE group (TSG T2 SWG1) for securing the download of manufacturer software to the UE and for the secure configuration of the UE by the operator.

2. *That TR 32.802 can be sent to TSG-SA for approval. If not, what changes need to be made to the TR before submitting it for approval?*

SA3 response: SA3 have not identified any major issues with the security aspects discussed in the TR. Therefore, we have not identified any security-related changes would be required before the TR is presented to SA.

SA3 look forward to working with SA5 and the other involved groups on the security building block for UEM.
