**Title:** Change Requests to TP-020272

**Agenda item:** 5.2.3

**Document for:** Information

---

NTT DoCoMo wishes to object to this group of 4CRs (TP-020272). The reason for our objection is as follows.

1. Firstly, when a +W46 query command is sent, the response will be 12 regardless of what wireless data service or services are supported by the terminal. It will not be possible to distinguish between:

- a) terminals that support only GSM data service
- b) terminals that support only WCDMA data service
- c) terminals that support both GSM and GPRS data services
- d) terminals that support both GSM and WCDMA data services

2. Secondly, when the setting command is used, it will not be possible to specify individually which wireless data service should be used. For example, in the case of dual GSM/WCDMA terminals, it would not be possible to specify that only WCDMA should be used.

For these two reasons, NTT DoCoMo can not accept TP-020272 (Change Requests to AT +W46).

3. Our objection was discussed at TSG-T#18. It was agreed in TSG-T that NTT DoCoMo will input a new CR to the next T2 meeting.
