Purpose: For decision

Attachments:

1. Overall Description:

Following the introduction of the UE phase discontinuity measurement to 25.101 Rel 5 it is now necessary to draft a suitable conformance test. It was discussed at length in T1 whether the appropriate test case, based on the proposal in T1-030338, is release independent.

T1 appreciates that this issue has been prompted by a Rel 5 CR and understands why it has not been incorporated into an earlier version in the core specification. However, T1 feels that the problem area identified is fundamental rather than a release specific 'feature'.

2. Actions:

To RAN4

ACTION: T1 kindly asks RAN4 to decide if the minimum requirement of UE phase discontinuity can be considered release independent.

3. Date of Next TSG T WG1 Meetings:

T1#20 28 July – 1 August 2003, Munich, Germany

T1#21

3 – 7 November 2003, Budapest, Hungary
