1. Overall Description:

TSG-T has reviewed TR 22.952, Priority Service Guide and offers the following comments to SA1 for consideration.

- 1.) This TR does not address the use of Priority Service with the USIM, which would be expected for some Release 6 networks. T3 has recently verified that all the SIM files used for Priority Service are available on the USIM.
- 2.) T2 has noted that there are some recent example of subscribers using SMS and MMS to assist emergency services personnel by providing them valuable information. In some instances this could coincide with an event where priority service might be invoked. In such cases it may be desirable to provide such calls priority service treatment.

2. Actions:

To SA1 group.

ACTION: TSG-T asks SA1 group to consider reflecting these comments in the current TR and while elaborating the potential requirements for the Multi-media Priority Service feasibility study

3. Date of next TSG-T Meetings:

T#22	10-12 Dec 2003	Hawaii, USA
T#23	10-12 Mar 2004	Phoenix, USA
