The following gives the status of the IETF dependencies as of April 7, 2002.

## 3GPP IETF Dependencies and Priorities

**Notes:**

- a. This dependency and priority is based on the information available as of April 7, 2002
- b. The 3GPP Requirement is that these IDs be stable and RFC numbers be available to allow 3GPP to reference them.
- c. Where individual IDs are listed, there is a desire that an ID providing similar requirements or functionality be progressed within the working group.
- d. The “Definite” column indicates how firm the 3GPP requirement for this ID is. Those listed as Possible are still under discussion (or in some cases not yet discussed in 3GPP).
- e. The “3GPP Priority” column indicates whether this functionality is deemed essential for the functioning of IMS or some planned 3GPP feature. Desirable indicates that major functionality will be sacrificed if this ID is not ready.
- f. The UID (Unique ID) refers to the ID in the 3GPP workplan.
- g. Items with a high risk of not being complete in time are marked in yellow. Completed items are in green.
- h. Dependency information compiled by Stephen Hayes, 3GPP TSG-CN Chair ([stephen.hayes@ericsson.com](mailto:stephen.hayes@ericsson.com), +1 469 360 8500)
