Title: Terms of Reference for TSG-N WG2

These terms of reference are intended to define at a high level the responsibility of TSG-N WG2 (known as N2) as a subset of the responsibilities of TSG-N.

N2 is responsible for the specifications of signalling for Core Network internal interfaces.

More specifically, N2 will address the following areas of work:

- Core network signalling between the core network nodes to support functionality such as mobility management information, subscription information and control of network services;
- Signalling for interworking with GSM networks (e.g. handover and roaming) – jointly with TSG-N WG1;
- Development and evolution of core network protocol for the support of packet and multi-media services - jointly with TSG-N WG1 & WG3;
- Core network O&M requirements.
