GSM North America

The North American Interest Group of the GSM Association

3GPP TSG_CN / SMG3 Plenary Meeting #7, Madrid, Spain 13th – 15th March 2000.

Source: GSM NA

Title: All IP Issues

Agenda item: 4.3

Document for: INFORMATION

January 14, 2000

To: Alan Cox, Chair, 3GPP SA1

Harald Dettner, Chair, 3GPP CN Niels Andersen, Chair, 3GPP SA Tuevo Jarvela, Chair, 3GPP SA2 Asok Chatterjee, Chair, T1P1 Linda Melvin, Director, GSM-NA

Gary Jones, Chair, GSM-NA Standards Working Group M.V. Thomas, Chair, GSM-NA Services Working Group

Randolph Wohlert, Chair, GSM-NA Location Services SubWorking Group

Philippe Lucas, Chair, GSM Association SERG Group

Dear Chairpersons,

cc:

The GSM-NA is interested in the important work taking place within your organization regarding standardization of an All-IP network.

In our opinion:

- The standards process should be driven by service requirements, and
- The carrier community should be an integral part of this process, and
- Introduction of new technologies should improve the customer's service experience (i.e. should not impose a reduction in the service set available or a reduction in the quality of service).
- The introduction of All-IP networks should be accomplished in a manner allowing for a smooth integration with existing (i.e. GPRS and circuit switched) technologies to provide a clear and smooth evolution path.

The following high-level service requirements need to be incorporated for successful deployment of services based on an all-IP network. These should be considered when identifying more specific requirements.

GSM North America

All-IP networks shall

- Provide backwards compatibility with the services offered by the Release 99 standard (including basic telecommunication services, supplementary services, and operator specific services)
 - The set of services available to customers shall be no less than the set of services available to customers obtaining service using existing GPRS and circuit switched technologies.
- Enable provision of services with the same (or greater) quality of service as GPRS and circuit switched services.
 - It shall be possible to offer services over an All-IP network with a quality of service that is no less than that already experienced by customers of existing GPRS and circuit switched networks.
 - The enabling mechanisms (transport technology, etc.) should be transparent to the customer.
- Enable provision of the same (or greater) degree of privacy, security, and authentication as GPRS and circuit switched services.
- Support roaming between All-IP networks and non-All-IP networks (including handover / cell reselection).

We respectfully request your organization to incorporate these requirements as part of the All-IP Service requirements specification. They may also prove useful as guidelines for more detailed discussions on specific requirements and standards decisions.

Sincerely yours,

[signed copy on file]

Jim Murrell Chair, GSM North America
