S1 thanks CN2 for the liaison according "Support of CAMEL phase 1 and/or CAMEL phase 2" (Tdoc N2-000640 / Tdoc S1-000807).

S1 was asked to mandate in the specifications that an IPLMN or VPLMN supporting CAMEL phase 2 shall support CAMEL phase 1. This view is supported and the respective CRs were approved.

Further on S1 assumes, that this fact is also valid for Camel phase 3. Respective CRs need to be drafted. S1 asks the Camel ad hoc group to prepare the respective CRs.

The assumption in principle seems to be also valid for Camel phase 4. However as Camel phase 4 is for 3GR5 and the scope is not yet finalised there might be the case that a function of earlier Camel released might have become obsolete meanwhile. This should be discussed in the Camel ad hoc group case by case and, if necessary, stated clearly in the specification if a certain function is not longer supported.
