GERAN would like to inform TSG_CN that during the review of CR402r2 & CR403r2 to 24.008 that GERAN2 found an unnecessary change (initially introduced into the CRs by GERAN) which would require all R99 (and Rel 4) single band GSM mobiles to start sending CM3 IE due to the need to set the new 'Single Band' field. This was previously not required.

The CRs have been updated to indicate that:

"This field shall be sent if the mobile station supports UMTS and one and only one GSM band with the exception of R-GSM; this field shall not be sent otherwise".

No other changes, to the CRs agreed by CN1, have been made.

The proposed CR 402r4 & CR 403r4 are attached.
