Introduction

- Specifications are being developed within 3GPP, and co-operatively with other organizations (i.e. IETF) that will enable the deployment of IP based multimedia services.

- A variety of mechanisms are under consideration to provide the capabilities needed to meet the requirements of envisioned services.

Slide 1 of 2

Introduction

- This report provides a high level end-to-end systems engineering perspective that considers how the <u>diverse mechanisms (enablers) being standardised</u> will collectively integrate to effectively meet <u>service requirements</u> and <u>enable the deployment of envisioned services</u>.
