Title: Revised Work Item Description OSA Stage 3 Rel-5; approved at CN#13 as NP-010535
Agenda item: 9.4
Document for: Decision

Work Item Description

Title: OSA Stage 3

1 **3GPP Work Area**

	Radio Access
X	Core Network
X	Services
	Terminals

2 **Linked work items**

- Feature-level WI ID#1367: VHE enhancements (stages 1 and 2)
- Feature-level WI ID#1637: OSA enhancements (stages 1 and 2)

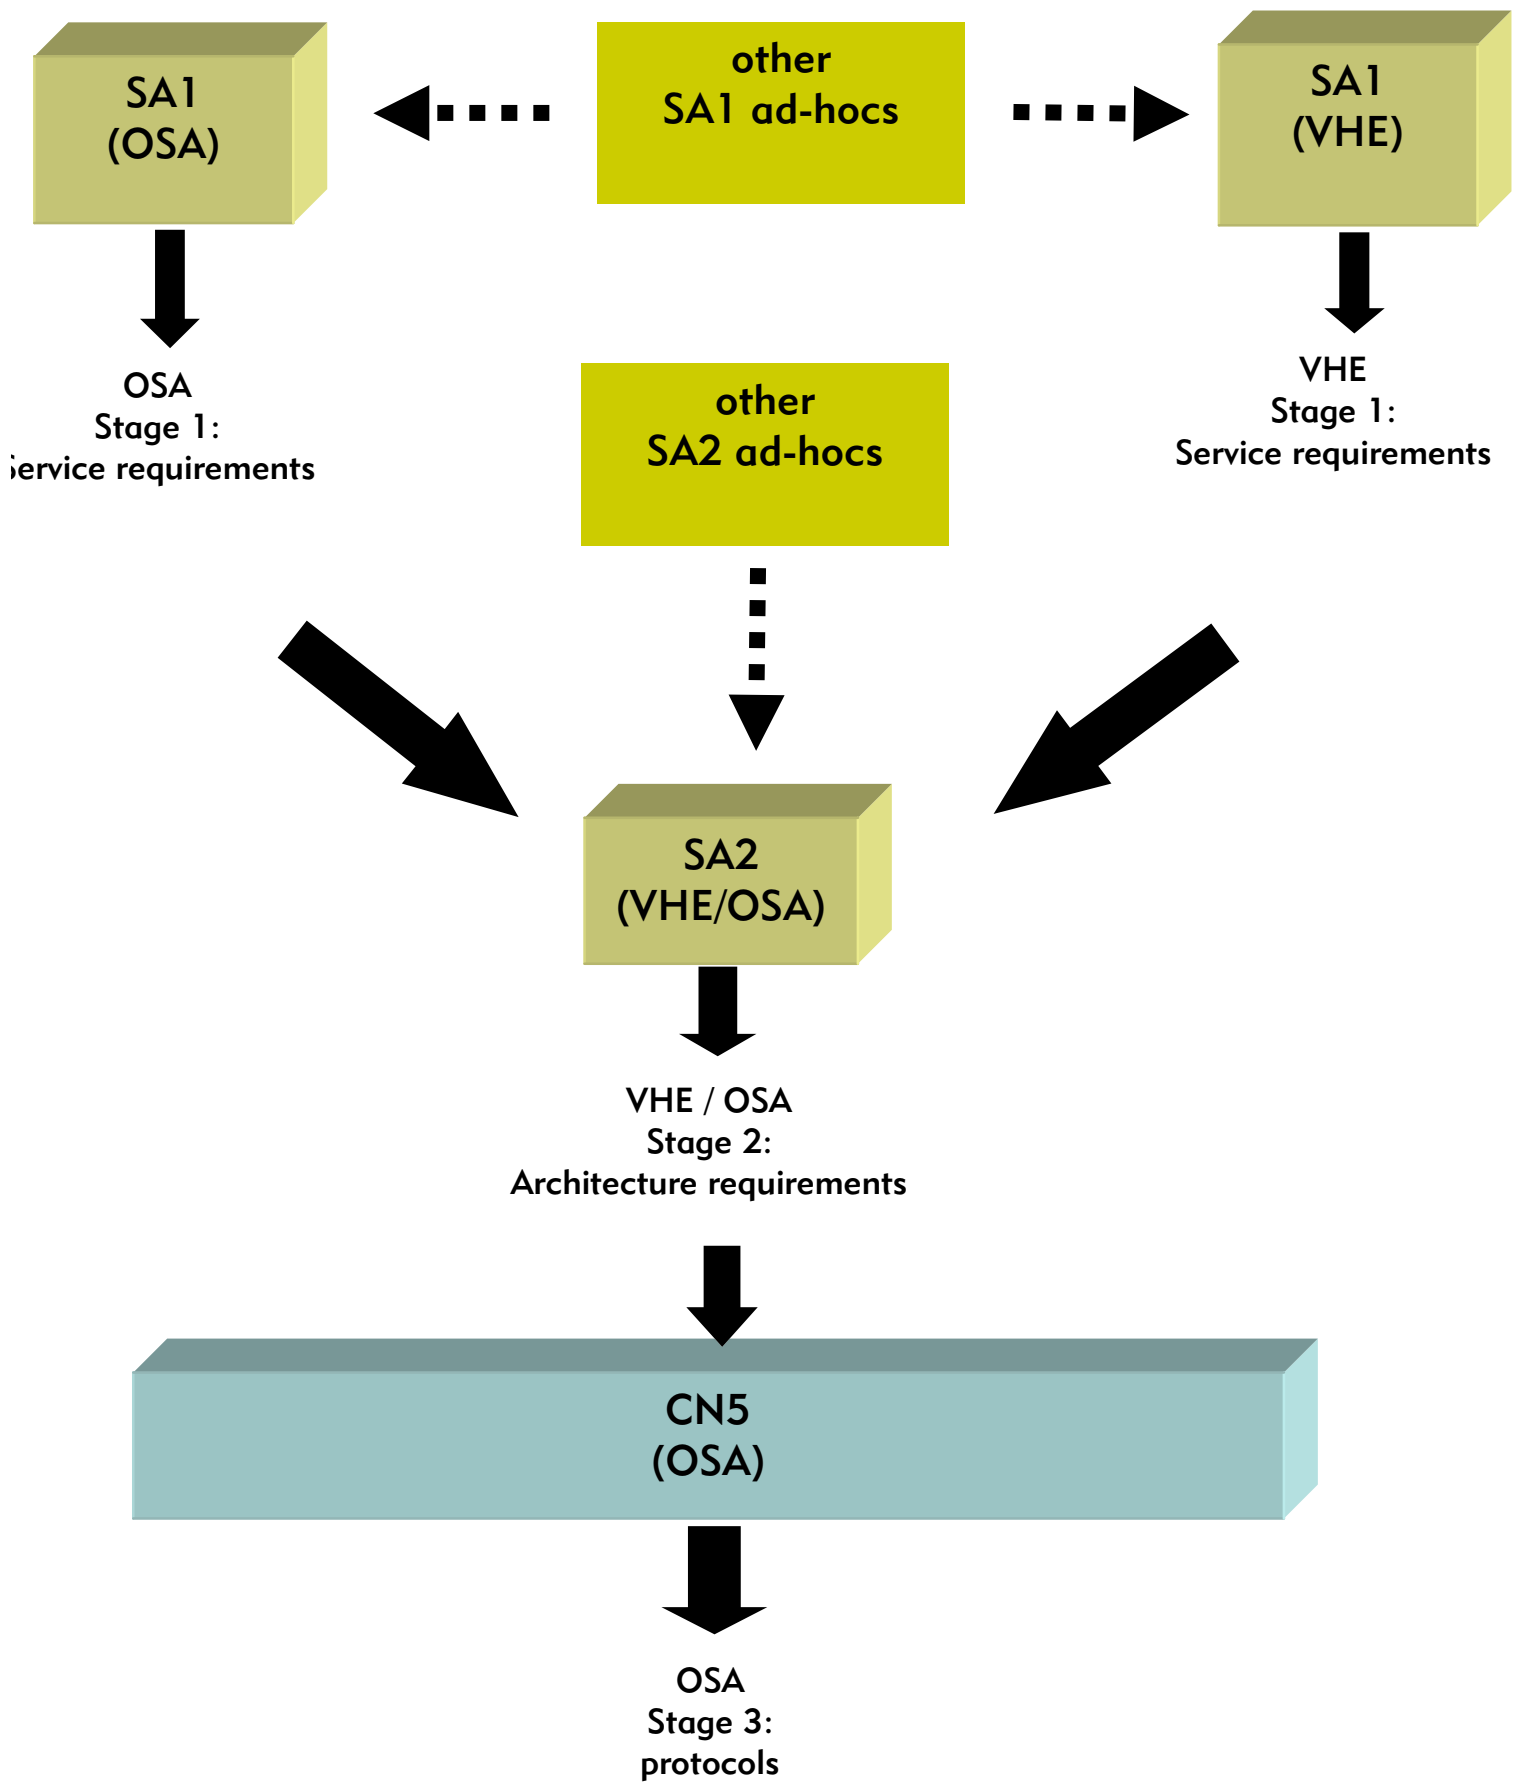

3 **Justification**

The Open Service Access (OSA) enables service application developers to make use of network functionality through open, standardised, secure, extensible and scalable interfaces. Applications see the network functionality offered to them as a set of Service Capability Features (SCFs) in the OSA API. These SCFs provide access to the network capabilities on which the application developers can rely when designing their applications. The OSA API is independent of where or which network capabilities are implemented in the network, and of vendor specific solutions and programming languages.

A secure OSA API is a key enabler for the Virtual Home Environment (VHE) system concept, which requires users to be consistently presented with the same personalised services in whatever network and terminal, subject to the capabilities of both.

4 **Objective**

Within the organisation of 3GPP TSG CN (Core Network), CN5 is in charge of the stage 3 specifications of the OSA API. The functionality provided by the API is defined in terms of requirements and their impact in the overall architecture defined by 3GPP, as shown in the following figure:

The figure above depicts the main OSA workflow; besides, co-ordination with other 3GPP groups will be necessary in some areas, some of which have already been identified, like Charging (SA5) and Security (SA3). Additionally CN5 is actively involved in liaisons of different natures with related bodies and fora, with the objective to ensure that there is a single API specified for the whole development community. In its joint work with these external bodies CN5 ensure that the 3GPP working process is respected – i.e. input from them is translated in terms of requirements and contributed to SA1.

5 Service Aspects

The OSA API stage 3 specifications will be aligned with the service provisioning architecture specified by 3GPP TSG SA (SA1 and SA2). As such, it will enable the provision of 3rd Party services for UMTS.

6 MMI-Aspects

None.

7 Charging Aspects

The OSA API stage 3 specifications will satisfy the charging requirements from SA1 and SA2 in co-operation with SA5, which will be found in TS 22.127 and TR 23.815.

8 Security Aspects

The OSA API stage 3 specifications will satisfy the security requirements from SA1 and SA2 in co-operation with SA3. They can be found in TS 22.127, TS 22.121, TR 23.955, and in the security architecture.

Title: Revised Work Item Description OSA Stage 3 Rel-5; approved at CN#13 as NP-010535
Agenda item: 9.4
Document for: Decision

NOTE 1: Only the work flow showing the relationship with the other 3GPP groups has been updated.

NOTE 2: The present document is a revision of NP-010671 affecting:

sections 7 and 8 (removed references to status/specific versions of 3GPP deliverables)

section 10 **Expected Output and Time scale** (changed target dates for Approval)

section 15 Work Tasks under this Building Block (added a new WT on WSDL specification of the OSA API) in line with the CN5 Chair report to CN#14 plenary (NP-010590)

3GPP TSG_CN5/Parlay/ETSI SPAN12
Meeting #14, Cancun, Mexico, 26 – 30 November 2001

N5-011124
