1. Overall Description:

SA 2 thanks CN plenary for their LS in S2-01-2723 (NP-01-0540)

SA 2 have received almost no information about WB-AMR. Some SA 2 delegates do not believe that it impacts any of the SA 2 specifications (in either CS domain or IMS). Other SA 2 delegates feel that they have insufficient information to assess the impact on SA 2 specifications.

With regard to “Adaptation of subscriber data in HLR/VLR”, it is SA 2’s understanding that SA plenary #13 decided that AMR-WB is a speech service, and it should be treated as the existing TS11. Hence all that applies to TS11, applies also to AMR-WB. So there should be no effect on CN’s subscriber data standards.

SA 2 expect that other groups will comment on whether or not all of the sub-topics are essential for completion within R’5.

SA 2 note that the current 3 GPP work plan (11/10/01) has delegated some “stage 2 activity” on WB-AMR to SA 2. Regrettably SA 2 has not been presented with information on this topic and hence has not carried out any work in this area. SA 2 assume that SA 4 has carried out all necessary “stage 2” work.

SA 2 note that NP-01-0540 was not sent to SA 5 and hence that SA 5 might not have been informed about the possible changes to CDR records.

2. Actions:

To SA 5: please consider the attached LS from CN plenary.

TO CN 4: TSG SA2 kindly ask CN 4 to take SA 2’s response into account.
