Title: CRs on Rel-5 Work Item CAMEL4, CR Pack 5
Agenda item: 8.3
Document for: APPROVAL

Introduction:

This document contains 6 CRs on Rel-5 WI CAMEL4. These CRs have been agreed by TSG CN WG2 and are forwarded to TSG CN Plenary meeting #17 for approval.

Spec	CR	Rev	Doc-2nd-Level	Phase	Subject	Cat	Ver_C
29.078	273		N2-020687	Rel-5	Removal of "Note that" in descriptions of CPH operations	F	5.0.0
23.078	429		N2-020688	Rel-5	Wrong State Name in CSA_gsmSSF	F	5.0.0
23.078	430		N2-020689	Rel-5	Change Int_Continue_Without_Leg2 to Int_Disconnect_Leg (Leg2)	F	5.0.0
23.078	431		N2-020690	Rel-5	Contents of CWA at MidCall DP	C	5.0.0
23.078	426	1	N2-020792	Rel-5	CSA_gsmSSF: Handling signals in states such as DL_ack	F	5.0.0
29.078	267	1	N2-020797	Rel-5	Move Leg and Split Leg Error - Task Refused	F	5.0.0

CHANGE REQUEST

⌘ **29.078 CR 273** ⌘ rev **-** ⌘ Current version: **5.0.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: UICC apps ME Radio Access Network Core Network

Title:	⌘	Removal of "Note that" in descriptions of CPH operations
Source:	⌘	Vodafone
Work item code:	⌘	CAMEL4
		Date: ⌘ 08/07/2002
Category:	⌘	F
		Use <u>one</u> of the following categories:
		F (correction)
		A (corresponds to a correction in an earlier release)
		B (addition of feature),
		C (functional modification of feature)
		D (editorial modification)
		Detailed explanations of the above categories can be found in 3GPP TR 21.900 .
		Release: ⌘ Rel-5
		Use <u>one</u> of the following releases:
		2 (GSM Phase 2)
		R96 (Release 1996)
		R97 (Release 1997)
		R98 (Release 1998)
		R99 (Release 1999)
		Rel-4 (Release 4)
		Rel-5 (Release 5)
		Rel-6 (Release 6)

Reason for change:	⌘	The descriptions of the Disconnect Leg, Move Leg and Split Leg operations contain an editor's note asking for clarification on the sentence "Note that no Mid_Call EDP will be reported for this case."
Summary of change:	⌘	Removal of "Note that" so that this sentence becomes normative text.
Consequences if not approved:	⌘	Confusion over whether this sentence is normative or informative.

Clauses affected:	⌘	11.15.2.1, 11.23.2.1 and 11.33.2.1								
Other specs affected:	⌘	<table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td style="width: 20px; text-align: center;">Y</td> <td style="width: 20px; text-align: center;">N</td> </tr> <tr> <td style="text-align: center;">X</td> <td style="text-align: center;">X</td> </tr> <tr> <td style="text-align: center;">X</td> <td style="text-align: center;">X</td> </tr> <tr> <td style="text-align: center;">X</td> <td style="text-align: center;">X</td> </tr> </table>	Y	N	X	X	X	X	X	X

***** First Modified Section *****

11.15 DisconnectLeg procedure

11.15.1 General Description

The gsmSCF uses this operation to request the gsmSSF to release a specific leg associated with the call. Any other leg(s) not specified in the Disconnect Leg operation are retained.

11.15.1.1 Parameters

- legToBeReleased:
This parameter indicates the call leg to be released.
- releaseCause:
This parameter may be used by the MSC for generating specific tones to the party to be released or to fill in the "cause" parameter in the release message.

11.15.2 Responding entity (gsmSSF)

11.15.2.1 Normal procedure

gsmSSF preconditions:

- 1) A control relationship exists between the gsmSCF and the gsmSSF.

gsmSSF postconditions:

- 1) The gsmSSF performs the call processing actions to release the indicated party.
- 2) Any armed EDPs on that leg shall be disarmed; any pending reports for that leg shall be sent to the gsmSCF.
- 3) If the released leg was the last leg within the Call Segment, then the CS_gsmSSF FSM for that Call Segment returns to the state "Idle".
- 4) If the leg was the last leg within the call, then the CSA_gsmSSF FSM returns to the state "Idle".
- 5) If the CS_gsmSSF FSM for the Call Segment concerned has not returned to the state "Idle", then it transits to the state "Waiting_for_Instructions". The remaining BCSM instances within the Call Segment shall transit to the O_Mid_Call DP or to the T_Mid_Call DP, unless already suspended at a DP. ~~Note that no~~ The Mid_Call EDP ~~will~~ shall not be reported for this case.
- 6) A Return Result shall be sent to the gsmSCF immediately after successful execution of this operation.

11.15.2.2 Error handling

Generic error handling for the operation related errors is described in clause 10, and the TC services which are used for reporting operation errors are described in clause 14.

***** Next Modified Section *****

11.23 MoveLeg procedure

11.23.1 General Description

The gsmSCF uses this operation to request the gsmSSF to move the leg from its current Call Segment to the initial Call Segment (CS ID = 1).

11.23.1.1 Parameters

- legIDToMove:
This parameter indicates the leg that shall be moved.

11.23.2 Responding entity (gsmSSF)

11.23.2.1 Normal procedure

gsmSSF preconditions:

- 1) A control relationship exists between the gsmSCF and the gsmSSF.
- 2) The corresponding BCSM is in the alerting, active or mid-call phase.
- 3) The CS_gsmSSF FSM for each Call Segment involved is in the state "Waiting_for_Instructions" or in the state "Monitoring".

gsmSSF postconditions:

- 1) The gsmSSF performs the appropriate call processing actions.
- 2) The CS_gsmSSF FSM for the initial Call Segment transits to the state "Waiting_for_Instructions". The BCSM instances within the initial Call Segment transit to the O_Mid_Call DP or to the T_Mid_Call DP, if not already suspended. ~~Note that no~~The Mid_Call EDP ~~shall not~~will be reported for this case.
- 3) The CS_gsmSSF process for the source Call Segment is terminated.
- 4) A Return Result is sent to the gsmSCF immediately after successful execution of this operation.

11.23.2.2 Error handling

Generic error handling for the operation related errors is described in clause 10, and the TC services which are used for reporting operation errors are described in clause 14.

****** Next Modified Section ******

11.33 SplitLeg Procedure

11.33.1 General Description

The gsmSCF uses this operation to request the gsmSSF to separate one party from the source Call Segment and place it in a new target Call Segment.

11.33.1.1 Parameters

- legToBeSplit:
This parameter indicates the party in the call to be split from the source Call Segment.
- newCallSegment:
This parameter indicates the CallSegmentID to be assigned to the newly-created Call Segment.

11.33.2 Responding entity (gsmSSF)

11.33.2.1 Normal procedure

gsmSSF preconditions:

- 1) A control relationship exists between the gsmSCF and the gsmSSF.
- 2) The initial Call Segment is either the source Call Segment or the target Call Segment.
- 3) The BCSM for the leg to be split is in the state O_Active, T_Active, O_Mid_Call or T_Mid_Call.

gsmSSF postconditions:

- 1) The gsmSSF performs the necessary actions to separate the specified leg from its original Call Segment and place it in a new target Call Segment.
- 2) The CS_gsmSSF FSM for the new Call Segment transits to the state "Waiting_for_Instructions".
- 3) The CS_gsmSSF FSM for the source Call Segment transits to the state "Waiting_for_Instructions".
- 4) The remaining BCSM instances within the source Call Segment transit to the O_Mid_Call DP or to the T_Mid_Call DP, unless already suspended at a DP. ~~Note that no~~ The Mid_Call EDP ~~shall not~~ will be reported for this case.
- 5) A Return Result shall be sent to the gsmSCF immediately after successful execution of this operation.

11.33.2.2 Error handling

Generic error handling for the operation related errors is described in clause 10, and the TC services which are used for reporting operation errors are described in clause 14.

CHANGE REQUEST

⌘ **23.078 CR 429** ⌘ rev **-** ⌘ Current version: **5.0.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: UICC apps ME Radio Access Network Core Network

Title:	⌘ Wrong State Name in CSA_gsmSSF		
Source:	⌘ Vodafone		
Work item code:	⌘ CAMEL4	Date:	⌘ 15/07/2002
Category:	⌘ F	Release:	⌘ Rel-5
	Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900 .		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

Reason for change:	⌘ The state name on page 19(21) of process CSA_gsmSSF should read 'Wait_For_Export_Ack_ML' as the handling of this state is currently unspecified. It currently reads 'Wait_For_Import_Leg_ack', however 'Int Export Leg ack' is received to exit this state.
Summary of change:	⌘ Change 'Wait_For_Import_Leg_Ack' to Wait_For_Export_Leg_Ack'.
Consequences if not approved:	⌘ The SDL modelling shows no handling from the state Wait_For_Export_Leg_Ack.

Clauses affected:	⌘ 4.5.7.6. (CSA_gsmSSF)

***** Section for information Only *****

4.6.2.9 Continue With Argument

4.6.2.9.1 Description

This IF requests the gsmSSF to continue the call processing with modified information at the DP at which it previously suspended call processing to await gsmSCF instructions or to continue call processing after a Call Party Handling IF was received. The gsmSSF completes DP processing if necessary, and continues basic call processing (i.e., proceeds to the next point in call in the BCSM) with the modified call setup information as received from the gsmSCF.

The gsmSCF can send modified call information at DP Collected_Info and at DP Analysed_Info, as listed in the MO and MF columns in subclause 4.6.2.9.2.

The gsmSCF can send modified call information at DP Termination_Attempt_Authorised, as listed in the MT and VT columns in subclause 4.6.2.9.2.

The gsmSCF can send modified call information immediately after sending an Initiate Call Attempt IF, as listed in the NC and NP columns in subclause 4.6.2.9.2.

In all other cases, Continue With Argument shall contain only either the Leg ID or Call Segment ID IE.

CHANGE REQUEST

⌘ **23.078 CR 426** ⌘ rev **1** ⌘ Current version: **5.0.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: UICC apps ME Radio Access Network Core Network

Title:	⌘ CSA_gsmSSF: Handling signals in states such as Wait_for_DL_ack		
Source:	⌘ Vodafone		
Work item code:	⌘ CAMEL4	Date:	⌘ 15/07/02
Category:	⌘ F	Release:	⌘ Rel-5
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	F (correction)		2 (GSM Phase 2)
	A (corresponds to a correction in an earlier release)		R96 (Release 1996)
	B (addition of feature),		R97 (Release 1997)
	C (functional modification of feature)		R98 (Release 1998)
	D (editorial modification)		R99 (Release 1999)
	Detailed explanations of the above categories can be found in 3GPP TR 21.900 .		Rel-4 (Release 4)
			Rel-5 (Release 5)
			Rel-6 (Release 6)

Reason for change:	⌘ In the Process CSA_gsmSSF, in states such as Wait_For_DL_ack, a signal such as Move_Leg could be received from the gsmSCF. The SDL modelling does not accept any signal except for the response to the previous request.
Summary of change:	⌘ Introduce a save 'All Other Signals' in states where other signals could be received, so that these are handled later.
Consequences if not approved:	⌘ Certain instructions received in the states (list below) will not be actioned.

Clauses affected:	⌘ 4.5.7.6						
Other specs affected:	<table border="1" style="display: inline-table; border-collapse: collapse;"> <tr> <td style="width: 20px; text-align: center;">Y</td> <td style="width: 20px; text-align: center;">N</td> </tr> <tr> <td style="text-align: center;"><input type="checkbox"/></td> <td style="text-align: center;"><input checked="" type="checkbox"/></td> </tr> </table>	Y	N	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Other core specifications	⌘

***** First Modified Section *****

11.23 MoveLeg procedure

11.23.1 General Description

The gsmSCF uses this operation to request the gsmSSF to move the leg from its current Call Segment to the initial Call Segment (CS ID = 1).

11.23.1.1 Parameters

- legIDToMove:
This parameter indicates the leg that shall be moved.

11.23.2 Responding entity (gsmSSF)

11.23.2.1 Normal procedure

gsmSSF preconditions:

- 1) A control relationship exists between the gsmSCF and the gsmSSF.
- 2) The corresponding BCSM is in the alerting, active or mid-call phase.
- 3) The CS_gsmSSF FSM for each Call Segment involved is in the state "Waiting_for_Instructions" or in the state "Monitoring".
- 4) [User Interaction is not in progress in either Call Segment.](#)

gsmSSF postconditions:

- 1) The gsmSSF performs the appropriate call processing actions.
- 2) The CS_gsmSSF FSM for the initial Call Segment transits to the state "Waiting_for_Instructions". The BCSM instances within the initial Call Segment transit to the O_Mid_Call DP or to the T_Mid_Call DP, if not already suspended. Note that no Mid_Call EDP will be reported for this case.
- 3) The CS_gsmSSF process for the source Call Segment is terminated.
- 4) A Return Result is sent to the gsmSCF immediately after successful execution of this operation.

11.23.2.2 Error handling

Generic error handling for the operation related errors is described in clause 10, and the TC services which are used for reporting operation errors are described in clause 14.

****** Next Modified Section ******

11.33 SplitLeg Procedure

11.33.1 General Description

The gsmSCF uses this operation to request the gsmSSF to separate one party from the source Call Segment and place it in a new target Call Segment.

11.33.1.1 Parameters

- legToBeSplit:
This parameter indicates the party in the call to be split from the source Call Segment.
- newCallSegment:
This parameter indicates the CallSegmentID to be assigned to the newly-created Call Segment.

11.33.2 Responding entity (gsmSSF)

11.33.2.1 Normal procedure

gsmSSF preconditions:

- 1) A control relationship exists between the gsmSCF and the gsmSSF.
- 2) The initial Call Segment is either the source Call Segment or the target Call Segment.
- 3) The BCSM for the leg to be split is in the state O_Active, T_Active, O_Mid_Call or T_Mid_Call.
- 4) [User interaction is not in progress in the source Call Segment.](#)

gsmSSF postconditions:

- 1) The gsmSSF performs the necessary actions to separate the specified leg from its original Call Segment and place it in a new target Call Segment.
- 2) The CS_gsmSSF FSM for the new Call Segment transits to the state "Waiting_for_Instructions".
- 3) The CS_gsmSSF FSM for the source Call Segment transits to the state "Waiting_for_Instructions".
- 4) The remaining BCSM instances within the source Call Segment transit to the O_Mid_Call DP or to the T_Mid_Call DP, unless already suspended at a DP. Note that no Mid_Call EDP will be reported for this case.
- 5) A Return Result shall be sent to the gsmSCF immediately after successful execution of this operation.

11.33.2.2 Error handling

Generic error handling for the operation related errors is described in clause 10, and the TC services which are used for reporting operation errors are described in clause 14.

***** Next Modified Section *****

10.1.10 TaskRefused

10.1.10.1 General description

10.1.10.1.1 Error description

The gsmSCF, gsmSSF, gsmSRF, smsSSF or gprsSSF uses this Error to indicate that it is not able to execute a specific task as requested by a CAP Operation, and recovery is expected to be completed within the current call instance.

[If the gsmSSF requests MoveLeg or SplitLeg operations in the gsmSSF while user interaction is in progress in an affected Call Sement then CAP Error \(task refused\) is returned.](#)
