Title: Proposed LS to T1P1.5 on LCS decisions in TSG-CN#6

Agenda item:

Document for: Approval

TSG-CN#6 received several LCS related CRs. TSG-CN would like to inform T1P1.5 LCS ad hoc group of decisions relating to them:

- in TDoc NP-99406, all 7 CRs listed below were approved, except for the CR 09.31-A001r2, because it contained text related to the yet pending issue, segmentation. A new revised version of this CR (CR 09.31-A001r3) (omitting segmentation) was later approved. It was also noted that a solution for inter-MSC handovers may be missing. As for the ownership of GSM 09.08, it was suggested that it should belong to SMG2. NOTE: There is no R99 version of CR to GSM 09.31 until it is turned over to 3GPP.
