Title: **CR-Handling for 29.002 (WI MAP-Sec/NDS)**

Agenda item: **8.10**

Document for: **Information / Discussion**

CN4 achieved in a tremendous final effort (2-day phone conference) the completion of CRs (NP 010348??) which are needed to implement the Network Domain Security (MAP-Security) in 29.002.

The results of this ad-hoc are acceptable nevertheless such meetings should be the absolute exception.

We propose to follow in future more strictly the rule to keep the last week before plenary meetings free of WG-meetings which allows all parties the necessary preparation time for the meeting itself.

TSG_CN has now produced all necessary CRs for Rel4 for the specifications in TSG_CN domain.

The work-item in sum can only be approved in TSG_SA since most of the work is in TSG_SA / SA3 domain.

We are aware that there are still some discussions in SA on this workitem which may not lead to the approval of the WI for Rel4. This is clearly stated on the CR-coversheets.

In case of non-approval at SA#12 CN would have to take out of 29.002 the CRs just going to be approved in this meeting ($\rightarrow$ approval of CRs in NP-010259).

To prevent uncertainty for the future on this topic and the stability of 29.002 our proposal is that

CN#12 agrees that the 29.002 CRs are implicitly approved for Rel5 if SA#12 would decide not to accept the WI for Rel4.
