# **joint-API-group** outgoing Liaison Statements

- 4 outgoing LSs since CN#14 (see **NP-020101**)

N5-020120	LS to SA1, SA2 (cc: SA5) on Clarification of requirements for the VHE
N5-020134	LS to SA1, SA2 on Clarification of the OSA Stage 1 Journaling Requirements
N5-020113	LS reply to SA3 (N5-020013/S3-010696) Security Framework
N5-020162	LS reply to SA3 LI (cc: SA1) (N5-020010/NP-010698) on Lawful Intercept related information in CN5 specifications

## 3GPP Rel-4 OSA Stage 3

- For the aligned 3GPP Rel-4 / Parlay 3.1 / ETSI OSA 1.1 a few minor error corrections (CRs category F) have been agreed by the

**joint-API-group**

- CRs 29.198-02 **NP-020104**

- CRs 29.198-12 **NP-020112**

**CN approval is requested under Agenda item 8.5**

## Rel-5 Status overview (1/2)

- **Recall : Incremental approach will be taken in order to first concentrate on the work that can be finished before March 2002 \* .**

Requirement	Priority	Status
Multi-media session control	High	70% finished, no progress during CN5#16, reconsidered decision to put its effort for the moment on mapping to pure SIP environment. The mapping will now be based on ISC.
Policy management	High	95% finished, integrated with rest of OSA APIs during CN5#16
Presence	High	90% finished, integrated with rest of OSA APIs during CN5#16, subset for 3GPP requirements will be produced
Content Based Charging	High	95% finished
WSDL APIs for SOAP / HTTP transport	High	90% finished
Journalling	Low	0% finished, clarification from SA1 requested
Terminal Capabilities	Low	99% finished, Rel 5 ready
Information Transfer	Low	0% finished, no progress
Information Services	Low	0% finished, no progress
User Profile	Low	waiting for further work in SA2
Authorisation	Low	waiting for further work in SA2
Network Capabilities	Low	initial contribution discussed, however decided to wait for further clarification from SA1

\* CN5's OSA API is a sub-set of the Parlay / ETSI OSA specifications

## **Rel-5 Status overview (2/2)**

- **At CN5#16 it was decided to wait with delivery of new OSA Rel. 5 work until CN#16, except for Terminal Capabilities, because:**
  - **more stable specification work and review of current material is desired**
  - **it allows full synchronization from start between 3GPP OSA Rel. 5, Parlay 4 and ETSI OSA 2**
  - **IMS work more stable around CN#16**
  - **Requirement clarification from SA1 still pending**

## Rel-5 Specification Status

- 1 Upgrade of existing specifications in Rel-4 to Rel-5**  
All OSA Rel-4 deliverables (TS/TR) should automatically be upgraded to Rel-5 in March 2002 (TSG#15) excepting **TS 29.198** Parts: **3, 4, 5** and **12** for which substantial CRs are expected in June 2002.
- 2 One Rel-5 CR for TS 29.198 Part 7 in NP-020113**  
**CN approval is requested under Agenda item 9.4**
- 3 Scheduled new deliverables (TS/TR) in Rel-5**  
Delivery as version 1.0.0 in June 2002 (TSG#15 meeting) for Information

TS	29.198-13	Open Service Access (OSA) Application Programming Interface (API); Part 13: Policy Management SCF
TS	29.198-14	Open Service Access (OSA) Application Programming Interface (API); Part 14: Presence and Availability Management SCF
TR	29.998-04-4	Open Service Access (OSA) Application Programming Interface (API) Mapping for Open Service Access; Part 4: Call Control Service Mapping; Subpart 4: Multiparty Call Control - ISC

- 4 CN5 asks that 3GPP OSA Stage 3 deliverables (TS/TR) should be “frozen” by 06/2002**

# ***Background material***

A GLOBAL INITIATIVE

**What is the**

**joint-API-group**

?

**The OSA-API specification is the result of a joint working group consisting of:**

- **Parlay** ([www.parlay.org](http://www.parlay.org))
- **ETSI SPAN's Project OSA** ([www.etsi.org/span](http://www.etsi.org/span))
- **3GPP TSG-CN WG5** ([www.3gpp.org/TB/CN/CN5/CN5.htm](http://www.3gpp.org/TB/CN/CN5/CN5.htm))

**in co-operation with companies representing the JAIN**  
(<http://jcp.org/jsr/tech/jain.jsp>) **community**

# What is the **joint-API-group** doing?

## Parlay-vous OSA ?

... or what you always desired/wanted/wished to know about the  
**Open Service Access (OSA) Application Programming Interfaces (APIs)**

## Opening the networks with Parlay / OSA APIs: standards

- The past years have shown an enormous increase in efforts to open-up telecom network functionality for application development. This means that applications can access core network functionality by means of open standardized APIs based on open technology.
- One value of opening-up of the network is the emergence of new business models where applications can be developed and provided by enterprises outside the traditional network operator domain.
- Combined with the fact that applications can be built with standard IT technology and tools, new innovative applications will hit the market with development cycles shorter than ever shown before. (PDF file)

# Relation to Standardisation Bodies

# 3GPP VHE and OSA

- 3GPP requires the support of the **VHE system concept**:  
*“users should be consistently presented with the same personalized services whatever the network that serves them, and whatever the terminal they use.”*
- 3GPP has identified a set of VHE enabling toolkits:  
**OSA is one of them**

# OSA in the 3GPP organisation

## Requirements Flow

- SA1 OSA ad-hoc delivers OSA requirements
- SA1 VHE ad-hoc delivers VHE requirements, that may impact OSA (OSA is a VHE-enabling toolkit)
- SA2 VHE/OSA receives these two sets of requirements, and classifies them into:
  - those which have an architectural impact and thus need further elaboration
  - those which do not, and can be directly forwarded to CN5
