Terms of Reference of TSG CT WG6 : Smart Card Application Aspects

1 Responsibilities

Development and maintenance of specifications and associated test specifications for the 3GPP smart card applications (including SIM, USIM and ISIM), and the interface with the Mobile Terminal.

2 Tasks

The main tasks of TSG-CT WG6 are:

- to design and maintain 3GPP Applications (including USIM and ISIM) to support 3GPP security requirements;

- to maintain the 3GPP SIM Application

- to provide capabilities for service creation (e.g. evolution of USIM Application Toolkit, APIs);

- to specify download mechanisms for applications;

- to specify the 3GPP applications as part of a multi-application card in a single/multi-card reader terminal environment;

- to maintain current service capabilities and develop new services, maintaining backwards compatibility;

3 Liaisons

- with ETSI Project SCP for the interface with the standard smart card platform;

- with other groups as required (e.g. 3GPP2, OMA, GSMA).
