Title: TSG RAN Work program
Document for: **Information and Discussion**
Agenda Item:

The attached report is a print out of the TSG-RAN Work program as recorded in the 3GPP Database.

The database is at present based on the ETSI WPM system. It is however, expected to be adapted to better suit 3GPP requirement in the near future.

The Report includes "Work Item description" type work items and "specification" (e.g. TS and TR) type Work items.

The Status codes are of no importance and should be ignored.

The Schedule Milestone Phase names may be changed to suit the work, for example a "Work Item description" type work item may have the following milestones:

- Creation of WI by WG/TB
- Start of work
- Report
- Stage 1 specification
- Stage 2 specification
- Stage 2 specification
- Completion

The target and achieved dates field allow for automatic flags to be raised if not met.

The Project codes may be used to link "Work Item Description" type work items with the resulting Specification work items and specifications impacted by CRs resulting from the WI.

The Work Item Reference identifies the WI type, the responsible TSG, the responsible WG and either a short abbreviation of the WI title or the specification number if and when allocated. e.g. DTS/TSCN-0124004 identifies a Draft TS from TSG CN WG1 specification 24.008

The system enables various styles of reports to be produced, the Full Report is produced here.

The system also enables WWW access to database work program reports, WWW queries may be tailored to suit TSGs and WGs requirements.

TSG-RAN is invited to check the information within the report and advise the 3GPP support group of any discrepancies.
