

TSG-RAN meeting #3

**TSGR#3(99)254**

Shin-Yokohama

April 21-23, 1999

**Source:** TSG RAN WG1

**Title:** Responsibility for conformance tests method and minimum performance requirements

**Agenda Item:**

**Document for:** Clarification

---

Conformance test method will be specified in T1 and minimum performance requirement will also be specified in R4.

To finalize release'99 by the end of this year, all the WGs now accelerate their works. But regarding conformance tests method and minimum performance requirement, who is responsible for them seems to be a little ambiguous.

But if these will not be defined within this year, we cannot implement and check this feature.

According to T1 milestones, they have to assume that the core specifications (S4.01A and S4.03) are stabilized in substance by September 1999. Actual individual requirements/parameters are expected to be stabilized by October 1999. Last editorial and other smaller changes must be released by December 2<sup>nd</sup>.

We should respect this decision and follow their milestones.

Of course, we must keep R4 milestones as well.

Therefore we would like to encourage that every contribution company (ex. open loop/closed loop Tx diversity) have responsibilities to make and contribute conformance tests method in T1 and minimum performance requirement in R4 respectively until the each WGs deadline.
