

TSG-RAN Meeting #8
Düsseldorf, Germany, 21 - 23 June 2000

RP-000200

(R4-000528, to TSG-RAN) LS on RAN WG4 R00 work items

Source: RAN WG4
Title: LS on RAN WG 4 R00 work items
To: TSG RAN
CC:

Contact Person Howard Benn – howard.benn@motorola.com

TSG RAN requested TSG RAN WG4 study their release 00 work and place then into the feature/building block/work item structure. During our meeting #12 we discussed this issue and studied the 'Proposal for the Release 2000 Features, Building Blocks and Work Tasks - Version 1.0' in our tdoc R4-00338.

TSG RAN WG4 has currently started working on release 2000 work items, although no R00 versions of the specifications are requested at this RAN plenary meeting.

From our last meeting the following items have been discussed

- Repeater RF specifications
- Low chip rate TDD option
- New BTS classifications
- TDD node B synchronisation
- Additional Performance requirements

RAN 4 believe that these fall under the following work tasks

Repeater RF specifications - Bearer and access stratum, Radio interface improvement, Repeater specification (Not currently a work task)

Low chip rate TDD option - Bearer and access stratum, Low chip rate TDD

New BTS classifications - Bearer and access stratum, RAN improvement, BTS classifications.

TDD node B synchronisation – Bearer and access stratum, RAN improvement, Node B synchronisation.

Additional Performance requirements - Bearer and access stratum, Radio interface improvement, Additional Performance requirements (Not currently a work task)

During the work on the low chip rate option it became apparent that the initial technical reports would not be available for this RAN meeting, therefore RAN WG4 kindly request that the work item description sheet is updated to show that the initial reports will be available at RAN #9.
