TSG-RAN Meeting #12   **RP-010406**
Stockholm, Sweden, 12-15 June 2001

Source:	**Rapporteur (Vodafone Group)**
Title:	**Status Report for TR 25.875 'NAS Node Selector Function'**
Document for:	**Information**

This is the rapporteur's report on the progress made so far in RAN3 on the "NAS Node Selector Function" Work Item since the RAN WG3 #21 meeting.

Status

- RAN WG3

The attached document TR 25.875 v0.0.2 shows the status of this document thus far within RAN3. Thus far, minimal progress has been made on this Technical report *within RAN WG3*, and the TR itself is little more than a 'skeleton' document with text added only within the sections: Scope, Task Description and 'Rationale for NNSF'. These additions are little more than enhancements of the textual description used within the Work Item Description (WID).

Since the inception of this TR, **no** contributions have been presented, discussed nor have proposals been agreed for inclusion within the document since RAN3 Meeting #19 in Cardiff, UK.

- SA WG2

SA WG2 leads this WI. In SA WG2 meetings #17 and #18 there have been fruitful discussions in describing this function and deriving a list of requirements. During April $19^{th} - 20^{th}$ SA WG2 held an ad-hoc (Düsseldorf, Germany) on this subject to accelerate the progress in developing this WI. Within this Status Report, the changes and conclusions made are not listed, but may I refer you to the latest version of the relevant S2 Technical Report: TR 23.236.

Proposal

In RAN3 Meeting #21 RAN3 decided to suspend work until SA2 indicate almost finished work, in order to avoid duplicated work in RAN3 and SA2.

Contact Details:

Rapporteur for 25.875 in RAN WG3 is:

Brendan McWilliams
brendan.mcwilliams@vf.vodafone.co.uk
