

**TSG-RAN Meeting #12
Stockholm, Sweden, 12 - 15 June 2001**

RP-010466

Title: Agreed CRs (Release '99 and Rel-4 category A) to TS 25.331 (5)

Source: TSG-RAN WG2

Agenda item: 8.2.3

Doc-1st-	Status-	Spec	CR	Rev	Phase	Subject	Cat	Version	Versio
-	-	25.331	840	3	R99	UE Positioning Measurement Accuracy Indication	F	3.6.0	3.7.0
-	-	25.331	841	1	Rel-4	UE Positioning Measurement Accuracy Indication	A	4.0.0	4.1.0
R2-011449	agreed	25.331	842	1	R99	Corrections on OTDOA-IPDL specific burst parameter semantic description	F	3.6.0	3.7.0
R2-011450	agreed	25.331	843		Rel-4	Corrections on OTDOA-IPDL specific burst parameter semantic description	A	4.0.0	4.1.0
R2-011290	agreed	25.331	844	1	R99	Error handling for messages sent from another RAT	F	3.6.0	3.7.0
R2-011291	agreed	25.331	845		Rel-4	Error handling for messages sent from another RAT	A	4.0.0	4.1.0
R2-011292	agreed	25.331	848	2	R99	Needed TFC in the TFCS for TDD	F	3.6.0	3.7.0

R2-011299	agreed	25.331	862	1	R99	CFN synchronisation problems at timing re-initialised hard handover	F	3.6.0	3.7.0
R2-011300	agreed	25.331	863		Rel-4	CFN synchronisation problems at timing re-initialised hard handover	A	4.0.0	4.1.0
R2-011452	agreed	25.331	865	2	R99	Corrections on UP Assistance Message Descriptions	F	3.6.0	3.7.0
R2-011453	agreed	25.331	866		Rel-4	Corrections on UP Assistance Message Descriptions	A	4.0.0	4.1.0
R2-011454	agreed	25.331	867	2	R99	Correction on Area Scope of SIB 15.3	F	3.6.0	3.7.0
R2-011455	agreed	25.331	868		Rel-4	Correction on Area Scope of SIB 15.3	A	4.0.0	4.1.0
R2-011301	agreed	25.331	871	1	R99	Correction to AICH power offset	F	3.6.0	3.7.0
R2-011302	agreed	25.331	872		Rel-4	Correction to AICH power offset	A	4.0.0	4.1.0

CHANGE REQUEST

⌘ 25.331 CR 840 ⌘ rev 3 ⌘ Current version: 3.6.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title: ⌘ UE Positioning Measurement Accuracy Indication

Source: ⌘ Qualcomm

Work item code: ⌘

Date: ⌘ 2001-06-12

Category: ⌘ **F**

Release: ⌘ R99

Use one of the following categories:

Use one of the following releases:

F (correction)

2 (GSM Phase 2)

A (corresponds to a correction in an earlier release)

R96 (Release 1996)

B (addition of feature),

R97 (Release 1997)

C (functional modification of feature)

R98 (Release 1998)

D (editorial modification)

R99 (Release 1999)

Detailed explanations of the above categories can be found in 3GPP TR 21.900.

REL-4 (Release 4)

REL-5 (Release 5)

Reason for change: ⌘ Conditions for reporting the SFN/GPS timing relationship info in 10.3.7.93 are incorrect. The optional reporting of the "Reference SFN" in 10.3.7.93 makes sense when the UTRAN also requests reporting of "GPS TOW usec". Thus this "Reference SFN" is changed from optional to conditional upon request.

Conditions for reporting the SFN/GPS timing relationship info in 10.3.7.109 are incorrect. The mandatory reporting of the "Reference SFN" in 10.3.7.109 is changed to conditional upon request so that it is only returned when "GPS TOW msec" and "GPS TOW usec" are requested and returned.

Summary of change: ⌘ Tabular: "UE positioning GPS measured results, 10.3.7.93"
• "Reference SFN" changed from optional to conditional upon request

Tabular: "UE positioning GPS position estimate info, 10.3.7.109"
• "Reference SFN" changed from mandatory to conditional upon request

ASN.1:

- "UE-Positioning-PositionEstimateInfo"
- "referenceSFN" changed from mandatory to optional

Backwards Compatability Analysis:

- Proposed changes are backward compatible.
1 and 2. Correction to a function where rules were missing.
Would not affect implementations behaving like indicated in the CR, would affect implementations supporting the corrected functionality otherwise.

Consequences if not approved:	⌘	Partial combinations of SFN/GPS timing parameters with little or no utility will be possible to report.
--------------------------------------	---	---

Clauses affected:	⌘	10.3.7.93, 10.3.7.109, 11.3
--------------------------	---	-----------------------------

Other specs affected:	⌘	<input type="checkbox"/>	Other core specifications	⌘	
		<input type="checkbox"/>	Test specifications		
		<input type="checkbox"/>	O&M Specifications		

Other comments:	⌘	
------------------------	---	--

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

... <NEXT MODIFIED SECTION> ...

10.3.7.93 UE positioning GPS measured results

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Reference SFN	<u>CV-Capability and request</u>		Integer(0..4095)	The SFN for which the location is valid
GPS TOW msec	MP		Integer(0..6.048*10 ⁸ -1)	GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). This time is the GPS TOW measured by the UE. If the Reference SFN field is present it is the ms flank closest to the beginning of that frame. GPS Time of Week in microseconds = 1000 * GPS TOW msec + GPS TOW rem usec
GPS TOW rem usec	CV-capability and request		Integer(0..999)	GPS Time of Week in microseconds MOD 1000.
Measurement Parameters	MP	1 to <maxSat>		
>Satellite ID	MP		Enumerated(0..63)	
>C/N ₀	MP		Integer(0..63)	the estimate of the carrier-to-noise ratio of the received signal from the particular satellite used in the measurement. It is given in whole dBs. Typical levels observed by UE-based GPS units will be in the range of 20 – 50 dB.
>Doppler	MP		Integer(-32768..32768)	Hz, scale factor 0.2.
>Whole GPS Chips	MP		Integer(0..1023)	Unit in GPS chips
>Fractional GPS Chips	MP		Integer(0..(2 ¹⁰ -1))	Scale factor 2 ⁻¹⁰
>Multipath Indicator	MP		Enumerated(NM, low, medium, high)	See note 1
>Pseudorange RMS Error	MP		Enumerated(range index 0..range index 63)	See note 2

Condition	Explanation
<i>Capability and request</i>	This field is included only if the UE has this capability and if it was requested in the UE positioning reporting quantity

NOTE 1: The following table gives the mapping of the multipath indicator field.

Value	Multipath Indication
NM	Not measured
Low	MP error < 5m
Medium	5m < MP error < 43m
High	MP error > 43m

NOTE 2: The following table gives the bitmapping of the Pseudorange RMS Error field.

Range Index	Mantissa	Exponent	Floating-Point value, x_i	Pseudorange value, P
0	000	000	0.5	$P < 0.5$
1	001	000	0.5625	$0.5 \leq P < 0.5625$
I	X	Y	$0.5 * (1 + x/8) * 2^y$	$x_{i-1} \leq P < x_i$
62	110	111	112	$104 \leq P < 112$
63	111	111	--	$112 \leq P$

10.3.7.109 UE positioning position estimate info

The purpose of this IE is to provide the position estimate from the UE to the network, if the UE is capable of determining its own position.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Reference SFN	MP CV- <i>Capability and request</i>		Integer(0..4095)	The SFN for which the location is valid
GPS TOW msec	CV- <i>Capability and request</i>		Integer(0..6.048*10 ⁸ -1)	GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). This time-stamps the beginning of the frame defined in Reference SFN GPS Time of Week in microseconds = 1000 * GPS TOW msec + GPS TOW rem usec
GPS TOW rem usec	CV- <i>Capability and request</i>		Integer(0..999)	GPS Time of Week in microseconds MOD 1000.
CHOICE <i>Position estimate</i>	MP			
>Ellipsoid Point			Ellipsoid Point; 10.3.8.4a	
>Ellipsoid point with uncertainty circle			Ellipsoid point with uncertainty circle 10.3.8.4d	
>Ellipsoid point with uncertainty ellipse			Ellipsoid point with uncertainty ellipse 10.3.8.4e	
>Ellipsoid point with altitude			Ellipsoid point with altitude 10.3.8.4b	
>Ellipsoid point with altitude and uncertainty ellipsoid			Ellipsoid point with altitude and uncertainty ellipsoid 10.3.8.4c	

Condition	Explanation
<i>Capability and request</i>	This field is included only if the UE has this capability and if it was requested in the UE positioning reporting quantity and if the method was UE-based GPS

CHANGE REQUEST

⌘ 25.331 CR 841 ⌘ rev 1 ⌘ Current version: 4.0.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title: ⌘ UE Positioning Measurement Accuracy Indication

Source: ⌘ Qualcomm

Work item code: ⌘

Date: ⌘ 2001-06-12

Category: ⌘ **F**

Release: ⌘ REL-4

Use one of the following categories:

Use one of the following releases:

F (correction)

2 (GSM Phase 2)

A (corresponds to a correction in an earlier release)

R96 (Release 1996)

B (addition of feature),

R97 (Release 1997)

C (functional modification of feature)

R98 (Release 1998)

D (editorial modification)

R99 (Release 1999)

Detailed explanations of the above categories can be found in 3GPP TR 21.900.

REL-4 (Release 4)

REL-5 (Release 5)

Reason for change: ⌘ Conditions for reporting the SFN/GPS timing relationship info in 10.3.7.93 are incorrect. The optional reporting of the "Reference SFN" in 10.3.7.93 makes sense when the UTRAN also requests reporting of "GPS TOW usec". Thus this "Reference SFN" is changed from optional to conditional upon request.

Conditions for reporting the SFN/GPS timing relationship info in 10.3.7.109 are incorrect. The mandatory reporting of the "Reference SFN" in 10.3.7.109 is changed to conditional upon request so that it is only returned when "GPS TOW msec" and "GPS TOW usec" are requested and returned.

Summary of change: ⌘ Tabular: "UE positioning GPS measured results, 10.3.7.93"
• "Reference SFN" changed from optional to conditional upon request

Tabular: "UE positioning GPS position estimate info, 10.3.7.109"
• "Reference SFN" changed from mandatory to conditional upon request

ASN.1:

- "UE-Positioning-PositionEstimateInfo"
- "referenceSFN" changed from mandatory to optional

Backwards Compatability Analysis:

- Proposed changes are backward compatible.
1 and 2. Correction to a function where rules were missing.
Would not affect implementations behaving like indicated in the CR, would affect implementations supporting the corrected functionality otherwise.

Consequences if not approved:	⌘	Partial combinations of SFN/GPS timing parameters with little utility or no will be possible to report.
--------------------------------------	---	---

Clauses affected:	⌘	10.3.7.93, 10.3.7.109, 11.3
--------------------------	---	-----------------------------

Other specs affected:	⌘	<input type="checkbox"/>	Other core specifications	⌘	
		<input type="checkbox"/>	Test specifications		
		<input type="checkbox"/>	O&M Specifications		

Other comments:	⌘	
------------------------	---	--

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10.3.7.93 UE positioning GPS measured results

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Reference SFN	<u>CV-Capability and request</u>		Integer(0..4095)	The SFN for which the location is valid
GPS TOW msec	MP		Integer(0..6.048*10 ⁸ -1)	GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). This time is the GPS TOW measured by the UE. If the Reference SFN field is present it is the ms flank closest to the beginning of that frame. GPS Time of Week in microseconds = 1000 * GPS TOW msec + GPS TOW rem usec
GPS TOW rem usec	CV-capability and request		Integer(0..999)	GPS Time of Week in microseconds MOD 1000.
Measurement Parameters	MP	1 to <maxSat>		
>Satellite ID	MP		Enumerated(0..63)	
>C/N ₀	MP		Integer(0..63)	the estimate of the carrier-to-noise ratio of the received signal from the particular satellite used in the measurement. It is given in whole dBs. Typical levels observed by UE-based GPS units will be in the range of 20 – 50 dB.
>Doppler	MP		Integer(-32768..32768)	Hz, scale factor 0.2.
>Whole GPS Chips	MP		Integer(0..1023)	Unit in GPS chips
>Fractional GPS Chips	MP		Integer(0..(2 ¹⁰ -1))	Scale factor 2 ⁻¹⁰
>Multipath Indicator	MP		Enumerated(NM, low, medium, high)	See note 1
>Pseudorange RMS Error	MP		Enumerated(range index 0..range index 63)	See note 2

Condition	Explanation
<i>Capability and request</i>	This field is included only if the UE has this capability and if it was requested in the UE positioning reporting quantity

NOTE 1: The following table gives the mapping of the multipath indicator field.

Value	Multipath Indication
NM	Not measured
Low	MP error < 5m
Medium	5m < MP error < 43m
High	MP error > 43m

NOTE 2: The following table gives the bitmapping of the Pseudorange RMS Error field.

Range Index	Mantissa	Exponent	Floating-Point value, x_i	Pseudorange value, P
0	000	000	0.5	$P < 0.5$
1	001	000	0.5625	$0.5 \leq P < 0.5625$
I	X	Y	$0.5 * (1 + x/8) * 2^y$	$x_{i-1} \leq P < x_i$
62	110	111	112	$104 \leq P < 112$
63	111	111	--	$112 \leq P$

... <NEXT MODIFIED SECTION> ...

10.3.7.109 UE positioning position estimate info

The purpose of this IE is to provide the position estimate from the UE to the network, if the UE is capable of determining its own position.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Reference SFN	MP CV- <i>Capability and request</i>		Integer(0..4095)	The SFN for which the location is valid
GPS TOW msec	CV- <i>Capability and request</i>		Integer(0..6.048*10 ⁸ -1)	GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). This time-stamps the beginning of the frame defined in Reference SFN GPS Time of Week in microseconds = 1000 * GPS TOW msec + GPS TOW rem usec
GPS TOW rem usec	CV- <i>Capability and request</i>		Integer(0..999)	GPS Time of Week in microseconds MOD 1000.
CHOICE <i>Position estimate</i>	MP			
>Ellipsoid Point			Ellipsoid Point; 10.3.8.4a	
>Ellipsoid point with uncertainty circle			Ellipsoid point with uncertainty circle 10.3.8.4d	
>Ellipsoid point with uncertainty ellipse			Ellipsoid point with uncertainty ellipse 10.3.8.4e	
>Ellipsoid point with altitude			Ellipsoid point with altitude 10.3.8.4b	
>Ellipsoid point with altitude and uncertainty ellipsoid			Ellipsoid point with altitude and uncertainty ellipsoid 10.3.8.4c	

Condition	Explanation
<i>Capability and request</i>	This field is included only if the UE has this capability and if it was requested in the UE positioning reporting quantity and if the method was UE-based GPS

```

CHANGE REQUEST

⌘ **25.331** **CR** **842** ⌘ rev **r1** ⌘ Current version: **3.6.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Corrections on OTDOA-IPDL specific burst parameter semantic description		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 03– 05-2001
Category:	⌘ F	Release:	⌘ R99
	Use <u>one</u> of the following categories: F (essential correction) A (corresponds to a correction in an earlier release) B (Addition of feature), C (Functional modification of feature) D (Editorial modification)		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)
	Detailed explanations of the above categories can be found in 3GPP TR 21.900.		

Reason for change:	⌘ The definition for the IPDL burst parameter in 25.214 in comparison to 25.331 could lead to different starting points of the second IPDL-burst. Per definition in 25.214 e.g. Burst_Freq is an absolute value, but per definition in the WG2 spec. Burst_Freq is more relative value.
Summary of change:	⌘ Replacement of semantic description with a reference to 25.214 Backward compatibility: This CR is backward compatible.
Consequences if not approved:	⌘ Different starting points for the second IP-burst in 25.214/25.224 in comparison to 25.331 reg. OTDOA-IPDL specific burst parameter.

Clauses affected:	⌘ 10.3.7.98
Other specs affected:	⌘ <input type="checkbox"/> Other core specifications ⌘ <input type="checkbox"/> <input type="checkbox"/> Test specifications <input type="checkbox"/> O&M Specifications
Other comments:	⌘

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: <http://www.3gpp.org/Specs/CRs.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10.3.7.98 UE positioning IPDL parameters

This IE contains parameters for the IPDL mode. The use of this parameters is described in [29].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
IP spacing	MP		Integer(5,7,10,15,20,30,40,50)	See [29]The IPs are repeated every IP spacing frame.
IP length	MP		Integer(5,10)	See [29]The length in symbols of the idle periods
IP offset	MP		Integer(0..9)	Relates the BFN and SFN, should be same as T_cell defined in [10]; See [29]
Seed	MP		Integer(0..63)	See [29]Seed used to start the random number generator
Burst mode parameters	OP			
>Burst Start	MP		Integer(0..15)	See [29]The frame number where the 1 st Idle Period Burst occurs within an SFN cycle. Scaling factor 256.
>Burst Length	MP		Integer(10..25)	See [29]Number of Idle Periods in a 'burst' of Idle Periods
>Burst freq	MP		Integer(1..16)	See [29]Number of 10ms frames between consecutive Idle Period bursts. Scaling factor 256.

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

9 Handling of unknown, unforeseen and erroneous protocol data

9.1 General

This subclause specifies procedures for the handling of unknown, unforeseen, and erroneous protocol data by the receiving entity. These procedures are called "error handling procedures", but in addition to provide recovery mechanisms for error situations they define a compatibility mechanism for future extensions of the protocol.

The error handling procedures specified in this subclause shall apply to all RRC messages. When there is a specific handling for messages received on different logical channels this is specified.

When the UE receives an RRC message, it shall set the variable `PROTOCOL_ERROR_REJECT` to FALSE and then perform the checks in the order as defined below.

The procedures specified in clause 8 are applied only for the messages passing the checks as defined below, except when procedure specific handling is used to recover from the error.

9.2 ASN.1 violation or encoding error

If the UE receives an RRC message on the DCCH for which the encoded message does not result in any valid abstract syntax value, it shall perform the following. The UE shall:

- set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
- transmit an RRC STATUS message on the uplink DCCH. The IE "Protocol error information" shall contain an IE "Protocol error cause" set to "ASN.1 violation or encoding error";
- when RRC STATUS message has been submitted to lower layers for transmission:
 - continue with any ongoing processes and procedures as if the invalid message had not been received.

If the UE receives an RRC message sent to the UE in a RRC information container via a radio access technology other than UTRAN, for which the encoded message does not result in any valid abstract syntax, the UE shall:

- set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
- set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "ASN.1 violation or encoding error";
- perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH, PCCH, CCCH or SHCCH for which the encoded message does not result in any valid abstract syntax value, it shall ignore the message.

9.3 Unknown or unforeseen message type

If a UE receives an RRC message on the DCCH with a message type not defined for the DCCH it shall:

- set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
- transmit an RRC STATUS message on the uplink DCCH. The IE "Protocol error information" shall contain an IE "Protocol error cause" set to "Message type non-existent or not implemented";
- when the RRC STATUS message has been submitted to lower layers for transmission:
 - continue with any ongoing processes and procedures as if the invalid message had not been received.

If the UE receives an RRC message on the BCCH, PCCH, CCCH or SHCCH with a message type not defined for the logical channel type the message was received on, it shall ignore the message.

9.3a Unsolicited received message

If the UE receives any of the following messages:

- an RRC CONNECTION SETUP message addressed to the UE on the CCCH; or
- an RRC CONNECTION REJECT message addressed to the UE on the CCCH; or
- a UE CAPABILITY INFORMATION CONFIRM message on the DCCH; or
- a CELL UPDATE CONFIRM message addressed to the UE on the CCCH or on the DCCH; or
- a URA UPDATE CONFIRM message addressed to the UE on the CCCH or on the DCCH

and no procedure is ongoing according to clause 8 which expects the message to be received:

the UE shall:

- ignore the received message.

9.3b Unexpected critical message extension

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, containing an undefined critical message extension, the UE shall:

- set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
- set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "Message extension not comprehended";
- perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH or PCCH, containing an undefined critical message extension, the UE shall:

- ignore the message.

9.4 Unknown or unforeseen information element value, mandatory information element

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, with a mandatory IE having a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, the UE shall:

- if a default value of the IE is defined:
 - treat the rest of the message using the default value of the IE;
- if no default value of the IE is defined:
 - set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
 - set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "Information element value not comprehended";
 - perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH or PCCH with a mandatory IE having a value reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, it shall

- if a default value of the IE is defined:
 - treat the rest of the message using the default value of the IE.
- if no default value of the IE is defined:
 - ignore the message.

9.5 Conditional information element error

If the UE receives an RRC message on the DCCH, BCCH, PCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, for which the specified conditions for absence of a conditional IE are met and that IE is present, the UE shall:

- ignore the IE;
- treat the rest of the message as if the IE was not present.

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE via a radio access technology other than UTRAN, for which the specified conditions for presence of a conditional IE are met and that IE is absent, the UE shall:

- set the variable `PROTOCOL_ERROR_REJECT` to `TRUE`;
- set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "Conditional information element error";
- perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH or PCCH for which the specified conditions for presence of a conditional IE are met and that IE is absent, the UE shall:

- ignore the message.

9.6 Unknown or unforeseen information element value, conditional information element

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, for which the specified conditions for presence of a conditional IE are met, that IE is present, and that IE has a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, the UE shall:

- if a default value of the IE is defined:
 - treat the rest of the message using the default value of the IE;
- if no default value of the IE is defined:
 - set the variable `PROTOCOL_ERROR_REJECT` to `TRUE`;
 - set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "Information element value not comprehended";
 - perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH or PCCH for which the specified conditions for presence of a conditional IE are met, that IE is present, and that IE has a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, the UE shall:

- if a default value of the IE is defined:
 - treat the rest of the message using the default value of the IE;
- if no default value of the IE is defined:
 - ignore the message.

9.7 Unknown or unforeseen information element value, optional information element

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, with an optional IE having a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, it shall:

- ignore the value of the IE;
- treat the rest of the message as if the IE was not present.

If the UE receives an RRC message on the BCCH or PCCH with an optional IE having a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, it shall:

- ignore the value of the IE;
- treat the rest of the message as if the IE was not present.

9.8 Unexpected non-critical message extension

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, containing an undefined non-critical message extension, the UE shall:

- ignore the content of the extension and the message contents after the extension, but treat the parts of the message up to the extension normally.

If the UE receives an RRC message on the BCCH or PCCH, containing an undefined non-critical message extension, the UE shall:

- ignore the content of the extension and the message contents after the extension, but treat the parts of the message up to the extension normally.

9 Handling of unknown, unforeseen and erroneous protocol data

9.1 General

This subclause specifies procedures for the handling of unknown, unforeseen, and erroneous protocol data by the receiving entity. These procedures are called "error handling procedures", but in addition to provide recovery mechanisms for error situations they define a compatibility mechanism for future extensions of the protocol.

The error handling procedures specified in this subclause shall apply to all RRC messages. When there is a specific handling for messages received on different logical channels this is specified.

When the UE receives an RRC message, it shall set the variable `PROTOCOL_ERROR_REJECT` to FALSE and then perform the checks in the order as defined below.

The procedures specified in clause 8 are applied only for the messages passing the checks as defined below, except when procedure specific handling is used to recover from the error.

9.2 ASN.1 violation or encoding error

If the UE receives an RRC message on the DCCH for which the encoded message does not result in any valid abstract syntax value, it shall perform the following. The UE shall:

- set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
- transmit an RRC STATUS message on the uplink DCCH. The IE "Protocol error information" shall contain an IE "Protocol error cause" set to "ASN.1 violation or encoding error";
- when RRC STATUS message has been submitted to lower layers for transmission:
 - continue with any ongoing processes and procedures as if the invalid message had not been received.

If the UE receives an RRC message sent to the UE in a RRC information container via a radio access technology other than UTRAN, for which the encoded message does not result in any valid abstract syntax, the UE shall:

- set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
- set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "ASN.1 violation or encoding error";
- perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH, PCCH, CCCH or SHCCH for which the encoded message does not result in any valid abstract syntax value, it shall ignore the message.

9.3 Unknown or unforeseen message type

If a UE receives an RRC message on the DCCH with a message type not defined for the DCCH it shall:

- set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
- transmit an RRC STATUS message on the uplink DCCH. The IE "Protocol error information" shall contain an IE "Protocol error cause" set to "Message type non-existent or not implemented";
- when the RRC STATUS message has been submitted to lower layers for transmission:
 - continue with any ongoing processes and procedures as if the invalid message had not been received.

If the UE receives an RRC message on the BCCH, PCCH, CCCH or SHCCH with a message type not defined for the logical channel type the message was received on, it shall ignore the message.

9.3a Unsolicited received message

If the UE receives any of the following messages:

- an RRC CONNECTION SETUP message addressed to the UE on the CCCH; or
- an RRC CONNECTION REJECT message addressed to the UE on the CCCH; or
- a UE CAPABILITY INFORMATION CONFIRM message on the DCCH; or
- a CELL UPDATE CONFIRM message addressed to the UE on the CCCH or on the DCCH; or
- a URA UPDATE CONFIRM message addressed to the UE on the CCCH or on the DCCH

and no procedure is ongoing according to clause 8 which expects the message to be received:

the UE shall:

- ignore the received message.

9.3b Unexpected critical message extension

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, containing an undefined critical message extension, the UE shall:

- set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
- set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "Message extension not comprehended";
- perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH or PCCH, containing an undefined critical message extension, the UE shall:

- ignore the message.

9.4 Unknown or unforeseen information element value, mandatory information element

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, with a mandatory IE having a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, the UE shall:

- if a default value of the IE is defined:
 - treat the rest of the message using the default value of the IE;
- if no default value of the IE is defined:
 - set the variable `PROTOCOL_ERROR_REJECT` to TRUE;
 - set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "Information element value not comprehended";
 - perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH or PCCH with a mandatory IE having a value reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, it shall

- if a default value of the IE is defined:
 - treat the rest of the message using the default value of the IE.
- if no default value of the IE is defined:
 - ignore the message.

9.5 Conditional information element error

If the UE receives an RRC message on the DCCH, BCCH, PCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, for which the specified conditions for absence of a conditional IE are met and that IE is present, the UE shall:

- ignore the IE;
- treat the rest of the message as if the IE was not present.

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE via a radio access technology other than UTRAN, for which the specified conditions for presence of a conditional IE are met and that IE is absent, the UE shall:

- set the variable `PROTOCOL_ERROR_REJECT` to `TRUE`;
- set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "Conditional information element error";
- perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH or PCCH for which the specified conditions for presence of a conditional IE are met and that IE is absent, the UE shall:

- ignore the message.

9.6 Unknown or unforeseen information element value, conditional information element

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, for which the specified conditions for presence of a conditional IE are met, that IE is present, and that IE has a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, the UE shall:

- if a default value of the IE is defined:
 - treat the rest of the message using the default value of the IE;
- if no default value of the IE is defined:
 - set the variable `PROTOCOL_ERROR_REJECT` to `TRUE`;
 - set the IE "Protocol error cause" in the variable `PROTOCOL_ERROR_INFORMATION` to "Information element value not comprehended";
 - perform procedure specific error handling according to clause 8.

If the UE receives an RRC message on the BCCH or PCCH for which the specified conditions for presence of a conditional IE are met, that IE is present, and that IE has a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, the UE shall:

- if a default value of the IE is defined:
 - treat the rest of the message using the default value of the IE;
- if no default value of the IE is defined:
 - ignore the message.

9.7 Unknown or unforeseen information element value, optional information element

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, with an optional IE having a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, it shall:

- ignore the value of the IE;
- treat the rest of the message as if the IE was not present.

If the UE receives an RRC message on the BCCH or PCCH with an optional IE having a value, including choice, reserved for future extension (spare) or when the encoded IE does not result in any valid abstract syntax value for this IE, it shall:

- ignore the value of the IE;
- treat the rest of the message as if the IE was not present.

9.8 Unexpected non-critical message extension

If the UE receives an RRC message on the DCCH, or addressed to the UE on the CCCH or on the SHCCH, or sent to the UE in a RRC information container via a radio access technology other than UTRAN, containing an undefined non-critical message extension, the UE shall:

- ignore the content of the extension and the message contents after the extension, but treat the parts of the message up to the extension normally.

If the UE receives an RRC message on the BCCH or PCCH, containing an undefined non-critical message extension, the UE shall:

- ignore the content of the extension and the message contents after the extension, but treat the parts of the message up to the extension normally.

Title:	⌘ Needed TFC in the TFCS for TDD		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 2001-05-25
Category:	⌘ F	Release:	⌘ R99
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	F (correction)	R96 (Release 1996)	2 (GSM Phase 2)
	A (corresponds to a correction in an earlier release)	R97 (Release 1997)	
	B (addition of feature),	R98 (Release 1998)	
	C (functional modification of feature)	R99 (Release 1999)	
	D (editorial modification)	REL-4 (Release 4)	
	Detailed explanations of the above categories can be found in 3GPP TR 21.900.	REL-5 (Release 5)	

Reason for change:	⌘ For TDD, there may be more than one dedicated CCTrCHs, each having its own TFCS. In order to allow the MAC to always find a suitable TFC, 8.6.5.2 defines some TFCs that should be always present in the TFCS. For TDD it is sufficient in these cases to have each of these minimal combinations in one of the CCTrCHs, except of the "empty" TFC, which should be available in all CCTrCHs.
Summary of change:	⌘ A description is added in 8.6.5.2 to clarify the TFC needs for TDD.
Consequences if not approved:	⌘ Not clear understanding, if the needed TFCs are meant to be per CCTrCH or for all CCTrCHs in TDD.

Clauses affected:	⌘ 8.6.5.2		
Other specs affected:	⌘ <input type="checkbox"/> Other core specifications	⌘ <input type="checkbox"/> Test specifications	⌘ <input type="checkbox"/> O&M Specifications
Other comments:	⌘ Backwards compatibility: <ul style="list-style-type: none"> • « Correction to a function where the specification was : <ul style="list-style-type: none"> ○ Procedural text or rules were missing. • Would not affect implementations behaving like indicated in the CR, would affect implementations supporting the corrected functionality otherwise. » 		

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.6.5.2 Transport format combination set

If the IE "Transport format combination set" is included, the UE shall for that direction (uplink or downlink):

- remove a previously stored transport format combination set if this exists;
- clear the IE "Duration" in the variable TFC_SUBSET;
- set both the IE "Current TFC subset" and the IE "Default TFC subset" in the variable TFC_SUBSET to the value indicating "full transport format combination set";
- remove any previous restriction of the transport format combination set;
- store the new transport format combination set present in the IE "Transport format combination set";
- start to respect those transport format combinations.

If the IE "Transport format combination set" is not included and if there is no addition/removal/replacement of transport channels, the UE shall for that direction (uplink or downlink):

- consider a previously stored transport format combination set if this exists as valid information.

For downlink CCTrCHs if no TFCS is stored in the UE the UE shall consider all possible transport format combinations and calculate the possible TFCI values according to the IE transport format combination set.

For downlink CCTrCHs if a TFCS is stored in the UE and

- if the IE "Transport format combination set" is not included and transport channels are deleted in the message, the UE shall:
 - remove the affected transport format combinations from the transport format combination set, recalculate the TFCI values and start to respect those transport format combinations
- if the IE "Transport format combination set" is not included and transport channels are added in the message, the UE shall:
 - consider all possible new combinations to be valid and recalculate the TFCI values and start to respect those transport format combinations. In TDD the new transport format combinations are considered to belong to the TFCS with the ID 1 of DCH type.
- if the IE "Transport format combination set" is not included and transport channels are replaced the UE shall:
 - consider all possible transport format combinations to be valid and calculate the TFCI values accordingly.

If the IE "Transport format combination set" is not included, the TFCI ordering shall correspond to the CTFC ordering.

The UTRAN should include in the TFCS, for each transport channel, a TFC with one transport block for this transport channel and 0 transport blocks for all the others. Similarly, the UTRAN should include, for each AM logical channel, a TFC with a minimum size compatible TF for the corresponding transport channel and 0 transport blocks for all other transport channels. Finally, the UTRAN should include, for each TM logical channel and for each SDU size associated with it, a TFC with a minimum size compatible TF for the corresponding transport channel and 0 transport blocks for all other transport channels. For TDD, the TFCS of a CCTrCH should include those of the above combinations, which include a TF with one transport block for a transport channel used in that CCTrCH.

For AM-RLC logical channels, the minimum size compatible TF includes one transport block with "Configured RLC Size" equal to the RLC PDU size. For non-segmented mode TM-RLC logical channels, the minimum size compatible TF includes one transport block with "Configured RLC Size" equal to the RLC SDU size considered. For segmented mode TM-RLC, the minimum size compatible TF is any TF such that the number of transport blocks multiplied by the "Configured RLC Size" is equal to the RLC SDU size considered. Note that the "Configured RLC Size" is defined as the transport block size minus the MAC header size.

Finally, UTRAN should include in the TFCS an "empty" TFC (e.g. the TFC with one transport block of zero size for one transport channel and zero transport blocks for all others). For TDD, the "empty" TFC should be included in the TFCS of every CCTrCH.

Title:	⌘ Needed TFC in the TFCS for TDD		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 2001-05-25
Category:	⌘ A	Release:	⌘ REL-4
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	F (correction)	2 (GSM Phase 2)	
	A (corresponds to a correction in an earlier release)	R96 (Release 1996)	
	B (addition of feature),	R97 (Release 1997)	
	C (functional modification of feature)	R98 (Release 1998)	
	D (editorial modification)	R99 (Release 1999)	
	Detailed explanations of the above categories can be found in 3GPP TR 21.900.	REL-4 (Release 4)	
		REL-5 (Release 5)	

Reason for change:	⌘ For TDD, there may be more than one dedicated CCTrCHs, each having its own TFCS. In order to allow the MAC to always find a suitable TFC, 8.6.5.2 defines some TFCs that should be always present in the TFCS. For TDD it is sufficient in these cases to have each of these minimal combinations in one of the CCTrCHs, except of the "empty" TFC, which should be available in all CCTrCHs.
Summary of change:	⌘ A description is added in 8.6.5.2 to clarify the TFC needs for TDD.
Consequences if not approved:	⌘ Not clear understanding, if the needed TFCs are meant to be per CCTrCH or for all CCTrCHs in TDD.

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.6.5.2 Transport format combination set

If the IE "Transport format combination set" is included, the UE shall for that direction (uplink or downlink):

- remove a previously stored transport format combination set if this exists;
- clear the IE "Duration" in the variable TFC_SUBSET;
- set both the IE "Current TFC subset" and the IE "Default TFC subset" in the variable TFC_SUBSET to the value indicating "full transport format combination set";
- remove any previous restriction of the transport format combination set;
- store the new transport format combination set present in the IE "Transport format combination set";
- start to respect those transport format combinations.

If the IE "Transport format combination set" is not included and if there is no addition/removal/replacement of transport channels, the UE shall for that direction (uplink or downlink):

- consider a previously stored transport format combination set if this exists as valid information.

For downlink CCTrCHs if no TFCS is stored in the UE the UE shall consider all possible transport format combinations and calculate the possible TFCI values according to the IE transport format combination set.

For downlink CCTrCHs if a TFCS is stored in the UE and

- if the IE "Transport format combination set" is not included and transport channels are deleted in the message, the UE shall:
 - remove the affected transport format combinations from the transport format combination set, recalculate the TFCI values and start to respect those transport format combinations
- if the IE "Transport format combination set" is not included and transport channels are added in the message, the UE shall:
 - consider all possible new combinations to be valid and recalculate the TFCI values and start to respect those transport format combinations. In TDD the new transport format combinations are considered to belong to the TFCS with the ID 1 of DCH type.
- if the IE "Transport format combination set" is not included and transport channels are replaced the UE shall:
 - consider all possible transport format combinations to be valid and calculate the TFCI values accordingly.

If the IE "Transport format combination set" is not included, the TFCI ordering shall correspond to the CTFC ordering.

The UTRAN should include in the TFCS, for each transport channel, a TFC with one transport block for this transport channel and 0 transport blocks for all the others. Similarly, the UTRAN should include, for each AM logical channel, a TFC with a minimum size compatible TF for the corresponding transport channel and 0 transport blocks for all other transport channels. Finally, the UTRAN should include, for each TM logical channel and for each SDU size associated with it, a TFC with a minimum size compatible TF for the corresponding transport channel and 0 transport blocks for all other transport channels. For TDD, the TFCS of a CCTrCH should include those of the above combinations, which include a TF with one transport block for a transport channel used in that CCTrCH.

For AM-RLC logical channels, the minimum size compatible TF includes one transport block with "Configured RLC Size" equal to the RLC PDU size. For non-segmented mode TM-RLC logical channels, the minimum size compatible TF includes one transport block with "Configured RLC Size" equal to the RLC SDU size considered. For segmented mode TM-RLC, the minimum size compatible TF is any TF such that the number of transport blocks multiplied by the "Configured RLC Size" is equal to the RLC SDU size considered. Note that the "Configured RLC Size" is defined as the transport block size minus the MAC header size.

Finally, UTRAN should include in the TFCS an "empty" TFC (e.g. the TFC with one transport block of zero size for one transport channel and zero transport blocks for all others). For TDD, the "empty" TFC should be included in the TFCS of every CCTrCH.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Clarification of Traffic Volume Measurements		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 5/15/2001
Category:	⌘ F	Release:	⌘ R99
	Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900.		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)

Reason for change:	⌘ The traffic volume measurements section is still not perfectly consistent with the messages used to configure it. The section on traffic volume measurements is not very clear.
Summary of change:	⌘ Added a note to the editor to correct a recurring reference to CONFIGURATION_INCOMPETE. Eliminated the check of "CHOICE Report Criteria" which is MP in the messaging and should therefore always be included. Specified that only reporting of traffic volume measurements on RBs multiplexed onto the same transport channels is supported. Indeed, this is the only thing that can be signalled. Moved a sentence that applied to event based trigger to the section on Traffic Volume report triggers Moved two sentence that described the reported quantities to the section on Traffic Volume Measurement quantity Added in R2-ADHOC: Clarified that exceeds is referring to applying an absolute threshold. Applied the corrections made to event 4b, to event 4a also. Eliminated the note to the editor since this change was already being made by another CR. Backward compatibility analysis: <u>Correction to a function where the specification was :</u> <ul style="list-style-type: none"> • <u>Containing some contradictions.</u> <u>Would not affect implementations behaving like indicated in the CR, would affect implementations supporting the corrected functionality otherwise. The changes do not affect backward compatibility.</u>
Consequences if not approved:	⌘ The text and the messaging will not be aligned.

Clauses affected: ⌘ 8.6.7.10, 14.4.1, 14.4.2, 14.4.2.1, 14.4.2.2

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request

NOTE TO THE EDITOR:

Please replace each occurrence of `CONFIGURATION_INCOMPETE` with `CONFIGURATION_INCOMPLETE`.

8.6.7.10 Traffic Volume Measurement

If the IE "Traffic Volume Measurement" is received by the UE, the UE shall:

- store the content of the IE to the variable `MEASUREMENT_IDENTITY`.

If the IE "Traffic volume measurement Object" is not included, the UE shall:

- apply the measurement reporting criteria to all uplink transport channels.

If IE "Traffic volume measurement" is received by the UE in a `MEASUREMENT CONTROL` message, where IE "measurement command" has the value "setup", and if the IE "traffic volume reporting quantity" is included, the UE shall:

- report the measured quantities specified in the IE "traffic volume reporting quantity";
- if the parameter "Average of RLC Buffer Payload for each RB" or the parameter "Variance of RLC Buffer payload for each RB" is set:
 - if the IE "Traffic volume measurement quantity" is not included:
 - set the variable `CONFIGURATION_INCOMPETE` to `TRUE`;
 - if the IE "Traffic volume measurement quantity" is included;
 - if the parameter "time interval to take an average or a variance" is included:
 - use the time specified in the parameter "time interval to take an average or a variance" to calculate the average and/or variance of RLC Buffer Payload according to the IE "traffic volume reporting quantity";
 - if the parameter "time interval to take an average or a variance" is not included:
 - set the variable `CONFIGURATION_INCOMPETE` to `TRUE`.

If IE "Traffic volume measurement" is received by the UE in a `MEASUREMENT CONTROL` message, where IE "measurement command" has the value "setup", but IE "Traffic volume measurement quantity" or IE "Traffic volume reporting quantity" or "~~CHOICE Report criteria~~" is not received, the UE shall:

- clear all stored measurement control information related associated to this measurement identity in variable `MEASUREMENT_IDENTITY`;
- set the variable `CONFIGURATION_INCOMPETE` to `TRUE`.

14.4 Traffic Volume Measurements

14.4.1 Traffic Volume Measurement Quantity

~~For traffic volume measurements in the UE only one quantity is compared with the thresholds. This quantity is Transport Channel Traffic Volume [15] (which equals the sum of Buffer Occupancies of RBs~~

~~multiplexed onto a transport channel) in number of bytes. In order to support a large variation of bit rates and RLC buffer size capabilities, a non-linear scale is used. Since, for each RB, the expected traffic includes both new and retransmitted RLC PDUs and potentially existing Control PDUs, all these should be included in the Buffer Occupancy measure. It should also be noted that traffic volume measurements are only applicable for acknowledged and unacknowledged mode.~~

~~According to what is stated in the Measurement Control message, the UE should support measuring reporting of RLC Buffer Payload, Average of RLC Buffer Payload, and Variance of RLC Buffer Payload for a specific RB, RBs multiplexed onto the same Transport channel and the total UE traffic volume (the same as one transport channel for a UE that uses RACH). The Reporting Quantities (i.e. RLC Buffer Payload, Average of RLC Buffer Payload, and Variance of RLC Buffer Payload of each RB) are indicated in the measurement control message. If Average of RLC Buffer Payload or Variance of RLC Buffer Payload is included as Reporting Quantity, the time interval to take an average or a variance shall be used.~~

14.4.2 Traffic Volume reporting triggers

~~Traffic volume can be reported in two different ways, periodical and event triggered. The reporting criteria are specified in the measurement control message.~~

~~For periodical reporting the UE simply measures-determines the Reporting Quantities in number of bytes for each RB mapped onto the indicated transport channels and reports the measurement-results at the given at the time instants interval and for the number of times specified. The Reporting Quantities (i.e. RLC Buffer Payload, Average of RLC Buffer Payload, and Variance of RLC Buffer Payload of each RB) are stated in the measurement control message. If Average of RLC Buffer Payload or Variance of RLC Buffer Payload is included as Reporting Quantity, the time interval to take an average or a variance shall be used.~~

~~For traffic volume measurements in the UE only one quantity is compared with the thresholds. This quantity is Transport Channel Traffic Volume [15] (which equals the sum of Buffer Occupancies of RBs multiplexed onto a transport channel) in number of bytes. Event triggered reporting is performed when the Transport Channel Traffic Volume exceeds an upper threshold or becomes smaller than a lower threshold. Every TTI, UE measures the Transport Channel Traffic Volume for each transport channel and compares it with the configured thresholds. If the value is out of range, the UE measures-determines the Reporting Quantities of for the RBs mapped onto that transport channel and reports the measurement-results. The Reporting Quantities are stated in the measurement control message.~~

14.4.2.1 Reporting event 4 A: Transport Channel Traffic Volume exceeds an absolute threshold

Figure 78: Event triggered report when Transport Channel Traffic Volume exceeds a certain threshold

If the monitored Transport Channel Traffic Volume [15] exceeds an absolute threshold, i.e. if $TCTF > \text{Reporting threshold}$, this is an event that could trigger a report. The corresponding report contains specifies at least which transport channel measurement ID the event that triggered the report belongs to.

14.4.2.2 Reporting event 4 B: Transport Channel Traffic Volume becomes smaller than an absolute threshold

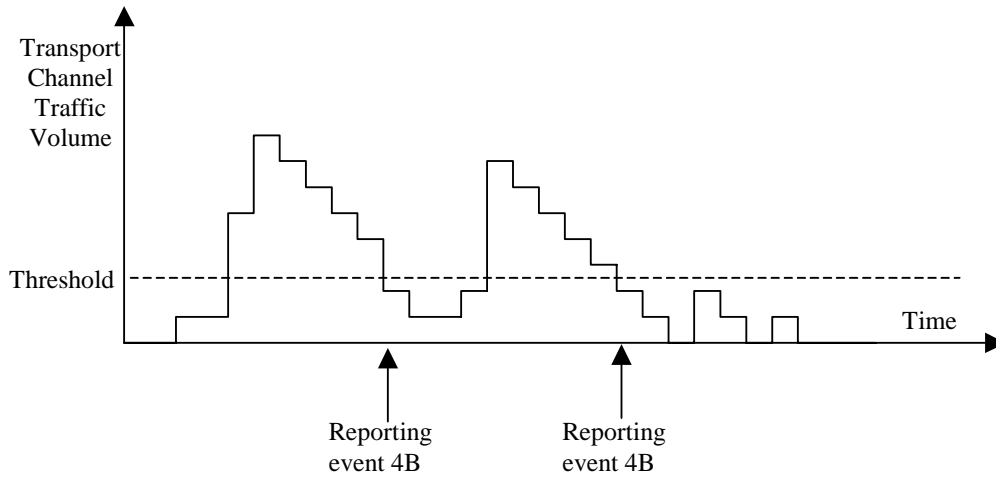

Figure 79: Event triggered report when Transport Channel Traffic Volume becomes smaller than certain threshold

If the monitored Transport Channel Traffic Volume [15] becomes smaller than an absolute threshold, i.e. if $TCTF < \text{Reporting threshold}$, this is an event that could trigger a report. The corresponding report contains specifies at least which transport channel measurement ID the event that triggered the report belongs to.

14.4.3 Traffic volume reporting mechanisms

Traffic volume measurement triggering could be associated with both a *time-to-trigger* and a *pending time after trigger*. The time-to-trigger is used to get time domain hysteresis, i.e. the condition must be fulfilled during the time-to-trigger time before a report is sent. Pending time after trigger is used to limit consecutive reports when one traffic volume measurement report already has been sent. This is described in detail below.

14.4.3.1 Pending time after trigger

This timer is started in the UE when a measurement report has been triggered. The UE is then forbidden to send any new measurement reports with the same measurement ID during this time period even when the triggering condition is fulfilled again. Instead the UE waits until the timer has suspended. If the Transport Channel Traffic Volume [15] is still above the threshold when the timer has expired the UE sends a new measurement report, and the timer is restarted. Otherwise it waits for a new triggering.

Figure 80: Pending time after trigger limits the amount of consecutive measurement reports

Figure 80 shows that by increasing the pending time after trigger a triggered second event does not result in a measurement report.

14.4.4 Interruption of user data transmission

A UE in CELL_FACH substate may be instructed by the UTRAN to cease transmission of user data on the RACH after a measurement report has been triggered. Before resuming transmission of user data,

- the UE shall receive from the UTRAN either a message allocating a dedicated physical channel, and make a transition to CELL_DCH state; or
- the UE shall receive an individually assigned measurement control message indicating that interruption of user data transmission is not be applied.

The transmission of signalling messages on the signalling bearer shall not be interrupted.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Clarification of Traffic Volume Measurements		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 5/25/2001
Category:	⌘ A	Release:	⌘ REL-4
	Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900.		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)

Reason for change:	⌘ The traffic volume measurements section is still not perfectly consistent with the messages used to configure it. The section on traffic volume measurements is not very clear.
Summary of change:	⌘ Added a note to the editor to correct a recurring reference to CONFIGURATION_INCOMPETE. Eliminated the check of "CHOICE Report Criteria" which is MP in the messaging and should therefore always be included. Specified that only reporting of traffic volume measurements on RBs multiplexed onto the same transport channels is supported. Indeed, this is the only thing that can be signalled. Moved a sentence that applied to event based trigger to the section on Traffic Volume report triggers Moved two sentence that described the reported quantities to the section on Traffic Volume Measurement quantity Added in R2-ADHOC: Clarified that exceeds is referring to applying an absolute threshold. Applied the corrections made to event 4b, to event 4a also. Eliminated the note to the editor since this change was already being made by another CR.
Consequences if not approved:	⌘ The text and the messaging will not be aligned.

Clauses affected:	⌘ 8.6.7.10, 14.4.1, 14.4.2, 14.4.2.1, 14.4.2.2
Other specs affected:	⌘ <input type="checkbox"/> Other core specifications ⌘ <input type="checkbox"/> Test specifications <input type="checkbox"/> O&M Specifications
Other comments:	⌘

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request

NOTE TO THE EDITOR:

Please replace each occurrence of CONFIGURATION_INCOMPETE with ~~CONFIGURATION_INCOMPLETE~~.

8.6.7.10 Traffic Volume Measurement

If the IE "Traffic Volume Measurement" is received by the UE, the UE shall:

- store the content of the IE to the variable MEASUREMENT_IDENTITY.

If the IE "Traffic volume measurement Object" is not included, the UE shall:

- apply the measurement reporting criteria to all uplink transport channels.

If IE "Traffic volume measurement" is received by the UE in a MEASUREMENT CONTROL message, where IE "measurement command" has the value "setup", and if the IE "traffic volume reporting quantity" is included, the UE shall:

- report the measured quantities specified in the IE "traffic volume reporting quantity";
- if the parameter "Average of RLC Buffer Payload for each RB" or the parameter "Variance of RLC Buffer payload for each RB" is set:
 - if the IE "Traffic volume measurement quantity" is not included:
 - set the variable CONFIGURATION_INCOMPETE to TRUE;
 - if the IE "Traffic volume measurement quantity" is included:
 - if the parameter "time interval to take an average or a variance" is included:
 - use the time specified in the parameter "time interval to take an average or a variance" to calculate the average and/or variance of RLC Buffer Payload according to the IE "traffic volume reporting quantity";
 - if the parameter "time interval to take an average or a variance" is not included:
 - set the variable CONFIGURATION_INCOMPETE to TRUE.

If IE "Traffic volume measurement" is received by the UE in a MEASUREMENT CONTROL message, where IE "measurement command" has the value "setup", but IE "Traffic volume measurement quantity" or IE "Traffic volume reporting quantity" ~~or "CHOICE Report criteria"~~ is not received, the UE shall:

- clear all stored measurement control information related associated to this measurement identity in variable MEASUREMENT_IDENTITY;
- set the variable CONFIGURATION_INCOMPETE to TRUE.

14.4 Traffic Volume Measurements

14.4.1 Traffic Volume Measurement Quantity

~~For traffic volume measurements in the UE only one quantity is compared with the thresholds. This quantity is Transport Channel Traffic Volume [15] (which equals the sum of Buffer Occupancies of RBs~~

~~multiplexed onto a transport channel) in number of bytes. In order to support a large variation of bit rates and RLC buffer size capabilities, a non-linear scale is used. Since, for each RB, the expected traffic includes both new and retransmitted RLC PDUs and potentially existing Control PDUs, all these should be included in the Buffer Occupancy measure. It should also be noted that traffic volume measurements are only applicable for acknowledged and unacknowledged mode.~~

~~According to what is stated in the Measurement Control message, the UE should support measuring-reporting of RLC Buffer Payload, Average of RLC Buffer Payload, and Variance of RLC Buffer Payload for a specific RB, RBs multiplexed onto the same Transport channel and the total UE traffic volume (the same as one transport channel for a UE that uses RACH). The Reporting Quantities (i.e. RLC Buffer Payload, Average of RLC Buffer Payload, and Variance of RLC Buffer Payload of each RB) are indicated in the measurement control message. If Average of RLC Buffer Payload or Variance of RLC Buffer Payload is included as Reporting Quantity, the time interval to take an average or a variance shall be used.~~

14.4.2 Traffic Volume reporting triggers

~~Traffic volume can be reported in two different ways, periodical and event triggered. The reporting criteria are specified in the measurement control message.~~

~~For periodical reporting the UE simply measures-determines the Reporting Quantities in number of bytes for each RB mapped onto the indicated transport channels and reports the measurement-results at the given at the time instants interval and for the number of times specified. The Reporting Quantities (i.e. RLC Buffer Payload, Average of RLC Buffer Payload, and Variance of RLC Buffer Payload of each RB) are stated in the measurement control message. If Average of RLC Buffer Payload or Variance of RLC Buffer Payload is included as Reporting Quantity, the time interval to take an average or a variance shall be used.~~

~~For traffic volume measurements in the UE only one quantity is compared with the thresholds. This quantity is Transport Channel Traffic Volume [15] (which equals the sum of Buffer Occupancies of RBs multiplexed onto a transport channel) in number of bytes. Event triggered reporting is performed when the Transport Channel Traffic Volume exceeds an upper threshold or becomes smaller than a lower threshold. Every TTI, UE measures the Transport Channel Traffic Volume for each transport channel and compares it with the configured thresholds. If the value is out of range, the UE measures-determines the Reporting Quantities of for the RBs mapped onto that transport channel and reports the measurement-results. The Reporting Quantities are stated in the measurement control message.~~

14.4.2.1 Reporting event 4 A: Transport Channel Traffic Volume exceeds an absolute threshold

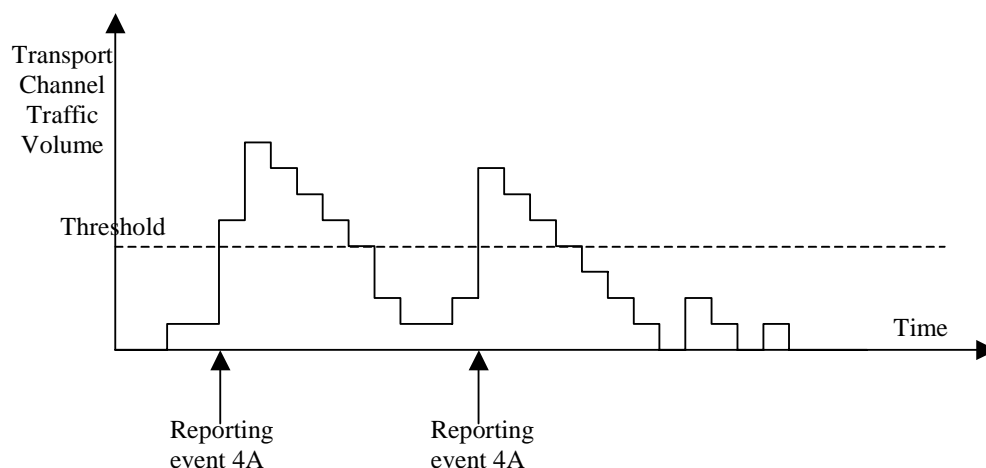

Figure 78: Event triggered report when Transport Channel Traffic Volume exceeds a certain threshold

If the monitored Transport Channel Traffic Volume [15] exceeds an absolute threshold, i.e. if $TCTF > \text{Reporting threshold}$, this is an event that could trigger a report. The corresponding report contains specifies at least which transport channel measurement ID the event that triggered the report belongs to.

14.4.2.2 Reporting event 4 B: Transport Channel Traffic Volume becomes smaller than an absolute threshold

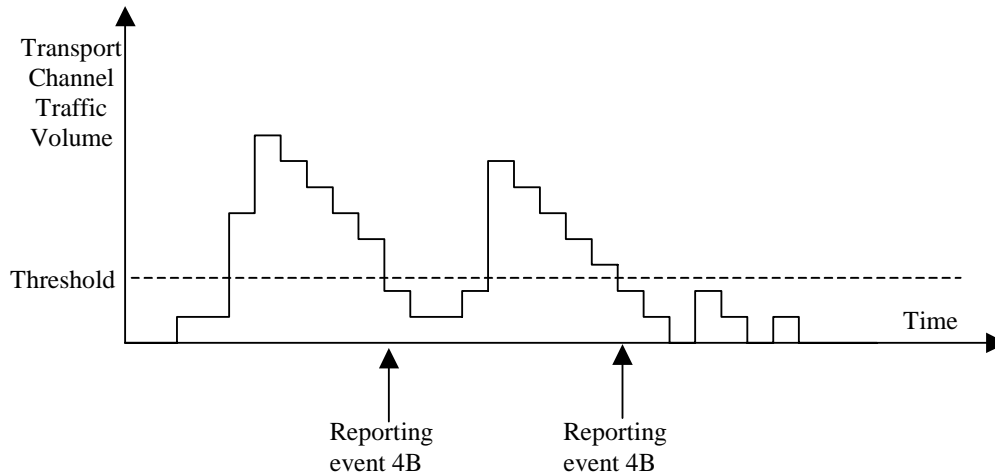

Figure 79: Event triggered report when Transport Channel Traffic Volume becomes smaller than certain threshold

If the monitored Transport Channel Traffic Volume [15] becomes smaller than an absolute threshold, i.e. if $TCTF < \text{Reporting threshold}$, this is an event that could trigger a report. The corresponding report contains specifies at least which transport channel measurement ID the event that triggered the report belongs to.

14.4.3 Traffic volume reporting mechanisms

Traffic volume measurement triggering could be associated with both a *time-to-trigger* and a *pending time after trigger*. The time-to-trigger is used to get time domain hysteresis, i.e. the condition must be fulfilled during the time-to-trigger time before a report is sent. Pending time after trigger is used to limit consecutive reports when one traffic volume measurement report already has been sent. This is described in detail below.

14.4.3.1 Pending time after trigger

This timer is started in the UE when a measurement report has been triggered. The UE is then forbidden to send any new measurement reports with the same measurement ID during this time period even when the triggering condition is fulfilled again. Instead the UE waits until the timer has suspended. If the Transport Channel Traffic Volume [15] is still above the threshold when the timer has expired the UE sends a new measurement report, and the timer is restarted. Otherwise it waits for a new triggering.

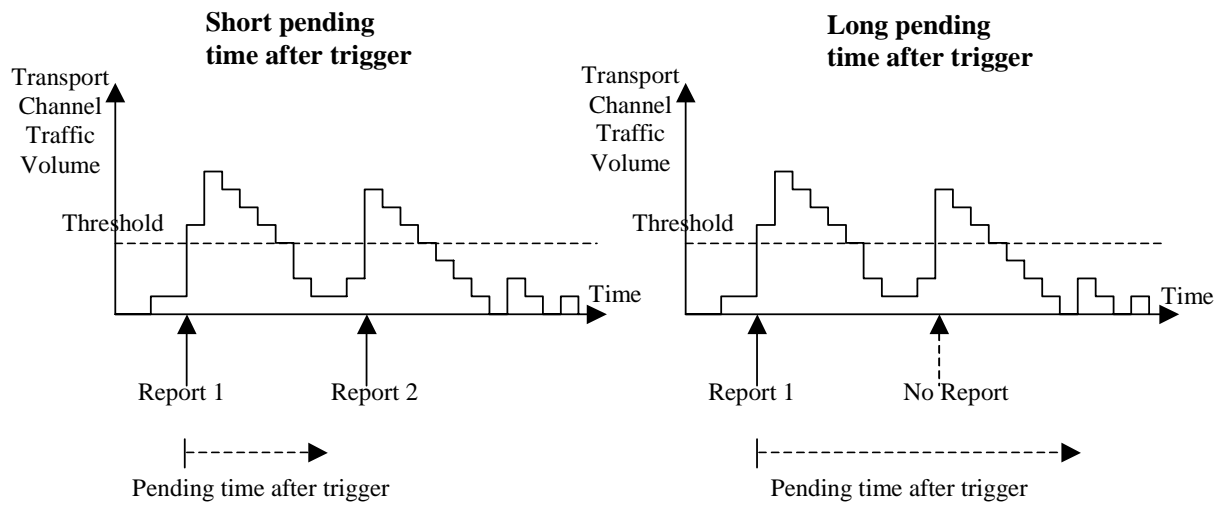

Figure 80: Pending time after trigger limits the amount of consecutive measurement reports

Figure 80 shows that by increasing the pending time after trigger a triggered second event does not result in a measurement report.

14.4.4 Interruption of user data transmission

A UE in CELL_FACH substate may be instructed by the UTRAN to cease transmission of user data on the RACH after a measurement report has been triggered. Before resuming transmission of user data,

- the UE shall receive from the UTRAN either a message allocating a dedicated physical channel, and make a transition to CELL_DCH state; or
- the UE shall receive an individually assigned measurement control message indicating that interruption of user data transmission is not to be applied.

The transmission of signalling messages on the signalling bearer shall not be interrupted.

CHANGE REQUEST

⌘ **25.331 CR 862** ⌘ rev **r1** ⌘ Current version: **3.6.0** ⌘

For HELP on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ CFN synchronisation problems at timing re-initialised hard handover		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 2001-05-24
Category:	⌘ F	Release:	⌘ R99
	Use <u>one</u> of the following categories: F (essential correction) A (corresponds to a correction in an earlier release) B (Addition of feature), C (Functional modification of feature) D (Editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900.		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)

Reason for change:	⌘ At timing-reinitialised hard handover, when UE receives IE "CFN-targetSFN frame offset" (COFF), UE shall correct its CFN accordingly (thus without reading SFN on target cell), and continue this frame numbering on the new RL. There is however a potential risk that UE and UTRAN, due to different understanding on the exact frame timing, do not 'connect' (or re-initialise) the frame numbering on the new RL to the same radio frame. UE and UTRAN might end up in unsynchronised CFN, leading to dropped call. Futhermore, this hard handover scenario, where COFF is signalled to UE, is not included in TS 25.402, "Synchronization in UTRAN, stage 2" <u>Backwards Compatibility Analysis:</u> This CR is backwards compatible, if IE "CFN-targetSFN frame offset" is not signalled to UE. Functionality is removed.
Summary of change:	⌘ Timing re-initialised hard handover scenario where UE receives IE "CFN-targetSFN frame offset" (COFF), and correct CFN without reading SFN of target cell is removed. UE shall ignore IE "CFN-targetSFN frame offset" if received. The formula is updated by removing the multiplication of DOFF with 512.
Consequences if not approved:	⌘ Risk of dropped calls due to unsynchronised CFN in UTRAN and UE.

Clauses affected:	⌘ 8.5.15.2, 8.6.6.28

Error! No text of specified style in document.

3

Error! No text of specified style in document.

8.5.15.2 Initialisation in CELL_DCH state at hard handover

When the UE is in CELL_DCH state and receives any of the messages causing the UE to perform a hard handover, the UE shall check the IE "Timing indication" in that message and:

- if IE "Timing indication" has the value "initialise" (i.e. timing re-initialised hard handover):
 - ~~— if IE "CFN targetSFN frame offset" is not included:~~
 - read SFN on target cell identified by the first radio link listed in the IE "Downlink information per radio link list" included in that message;Changed indentation
 - set the CFN according to the following formula: Changed indentation
 - for FDD: Changed indentation
 - $CFN = ((SFN * 38400 - DOFF * 512) \text{ div } 38400) \text{ mod } 256$; Changed indentation
 - for TDD: Changed indentation
 - $CFN = (SFN - DOFF) \text{ mod } 256$; Changed indentation
 - ~~— if IE "CFN targetSFN frame offset" is included in the message causing the UE to perform a timing re-initialised hard handover, CFN shall be calculated according to the following formula:~~
 - ~~— for FDD:~~
 - ~~— $CFN_{new} = (CFN_{old} * 38400 + COFF * 38400 - DOFF * 512) \text{ div } 38400 \text{ mod } 256$~~
 - ~~— for TDD:~~
 - ~~— $CFN_{new} = (CFN_{old} + COFF - DOFF) \text{ mod } 256$~~
 - ~~— where COFF is the value of "CFN targetSFN frame offset".~~
- ~~NOTE: $CFN_{targetSFN \text{ frame offset}} = (TargetSFN - CFN) \text{ mod } 256$~~
- if IE "Timing indication" has the value "maintain" (i.e. timing-maintained hard handover), the UE shall keep CFN with no change due to the hard handover, and only increase CFN (mod 256) by 1 every frame.

8.6.6.28 Downlink DPCH info common for all radio links

If the IE "Downlink DPCH info common for all radio links" is included the UE shall:

- perform actions for the IE "Timing indicator" ~~and the IE "CFN-targetSFN frame offset"~~ as specified in subclause 8.5.15.2;
- ignore the value received in IE "CFN-targetSFN frame offset";
- if the IE choice "mode" is set to 'FDD':
 - if the IE "Downlink DPCH power control information" is included:
 - perform actions for the IE "DPC Mode" according to [29];
 - if the IE "Downlink rate matching restriction information" is included:
 - store the transport channels that have restrictions on the allowed transport formats;
 - perform actions for the IE "spreading factor";
 - perform actions for the IE "Fixed or Flexible position";
 - perform actions for the IE "TFCI existence";
 - if the IE choice "SF" is set to 256:
 - store the value of the IE "Number of bits for pilot bits";
 - if the IE choice "SF" set to 128:
 - store the value of the IE "Number of bits for pilot bits";
- if the IE choice "mode" is set to 'TDD':
 - perform actions for the IE "Common timeslot info".

If the IE "Downlink DPCH info common for all radio links " is included in a message used to perform a Timing re-initialised hard handover, and ciphering is active for any radio bearer using RLC-TM, the UE shall, after having activated the dedicated physical channels indicated by that IE:

- increment HFN for RLC-TM by '1'.

R97 (Release 1997)

C (functional modification of feature)

R98 (Release 1998)

D (editorial modification)

R99 (Release 1999)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

REL-4 (Release 4)

REL-5 (Release 5)

Reason for change: ⌘ 8.1.1.1.5, No information about the need for broadcasting Ephemeris (SIB 15.2) and Reference Location/Position (SIB 15) simultaneously.

10.2.48.8.18.2, Use common GPS language. In fact, the majority of the parameters in the table are Ephemeris data.

10.3.7.89, Same as the above.

10.3.7.90a, Same as the above.

10.3.7.94, Same as the above.

10.3.7.96, Use the same parameter order as the original satellite navigation message to reduce the work load. Otherwise, the GPS server at the UTRAN has to change the order. After the UE receives them, it has to change the order back to match with the same navigation message received directly from the satellite.

This CR is backward compatible since it is only affects UE positioning.

Summary of change: ⌘ 8.1.1.1.5, Add note about the need for broadcasting Ephemeris (SIB 15.2) and Reference Location/Position (SIB 15) simultaneously.

10.2.48.8.18.2, Use common GPS language. In fact, the majority of the parameters in the table are Ephemeris data.

10.3.7.89, Same as the above.

10.3.7.90a, Same as the above.

10.3.7.94, Same as the above.

10.3.7.96, Use the same parameter order as the original satellite navigation message to reduce the work load. Otherwise, the GPS server at the UTRAN has to change the order. After the UE receives them, it has to change the order back to match with the same navigation message received directly from the satellite.

Consequences if not approved: ⌘ It would lead to inefficient implementation and waste network and terminal resources

***** NEXT MODIFIED SECTION *****

8.1.1.6.15 System Information Block type 15

If the UE is in idle or connected mode, and supports GPS location services and/or OTDOA location services it should store all relevant IEs included in this system information block. The UE shall:

- if the IE "Cipher GPS Data Indicator" is included, and the UE has a full or reduced complexity GPS receiver functionality (the UE will know that the broadcast GPS data is ciphered in accordance with the Data Assistance Ciphering Algorithm detailed in [18]):
store the parameters contained within this IE (see 10.3.7.86 for details), and use them to decipher the broadcast UE positioning GPS information contained within the System Information Block types 15.1, 15.2 and 15.3;
- use IE "Reference Location" as a priori knowledge of the approximate location of the UE;
- if the IE "NODE B Clock Drift" is included:
 - use it as an estimate of the drift rate of the NODE B clock relative to GPS time;
- if the IE "NODE B Clock Drift" is not included:
 - assume the value 0;
- if SFN is included:
 - use it as the relationship between GPS time and air-interface timing of the NODE B transmission in the serving cell;
- use "Reference GPS TOW" as GPS Time of Week which is the start of the frame with SFN=0;

Note: For efficiency purposes, the UTRAN should broadcast SIB 15 if it is broadcasting SIB 15.2.

CHANGE REQUEST

⌘ **25.331 CR 866** ⌘ rev ⌘ Current version: **4.0.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Corrections on UP Assistance Message Descriptions		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 25 May, 01
Category:	⌘ A	Release:	⌘ REL-4
	Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900.		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)

Reason for change:	⌘ 8.1.1.1.5, No information about the need for broadcasting Ephemeris (SIB 15.2) and Reference Location/Position (SIB 15) simultaneously. 10.2.48.8.18.2, Use common GPS language. In fact, the majority of the parameters in the table are Ephemeris data. 10.3.7.89, Same as the above. 10.3.7.90a, Same as the above. 10.3.7.94, Same as the above. 10.3.7.96, Use the same parameter order as the original satellite navigation message to reduce the work load. Otherwise, the GPS server at the UTRAN has to change the order. After the UE receives them, it has to change the order back to match with the same navigation message received directly from the satellite.
Summary of change:	⌘ 8.1.1.1.5, Add note about the need for broadcasting Ephemeris (SIB 15.2) and Reference Location/Position (SIB 15) simultaneously. 10.2.48.8.18.2, Use common GPS language. In fact, the majority of the parameters in the table are Ephemeris data. 10.3.7.89, Same as the above. 10.3.7.90a, Same as the above. 10.3.7.94, Same as the above. 10.3.7.96, Use the same parameter order as the original satellite navigation message to reduce the work load. Otherwise, the GPS server at the UTRAN has to change the order. After the UE receives them, it has to change the order back

to match with the same navigation message received directly from the satellite.

Consequences if not approved: ⌘ It would lead to inefficient implementation and waste network and terminal resources

Clauses affected: ⌘ 8.1.1.6.15, 10.2.48.8.18.2, 10.3.7.89, 10.3.7.90a, 10.3.7.94, 10.3.7.96, 11

Other specs affected: ⌘ Other core specifications ⌘
 Test specifications
 O&M Specifications

Other comments: ⌘

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

***** NEXT MODIFIED SECTION *****

8.1.1.6.15 System Information Block type 15

If the UE is in idle or connected mode, and supports GPS location services and/or OTDOA location services it should store all relevant IEs included in this system information block. The UE shall:

- if the IE "Cipher GPS Data Indicator" is included, and the UE has a full or reduced complexity GPS receiver functionality (the UE will know that the broadcast GPS data is ciphered in accordance with the Data Assistance Ciphering Algorithm detailed in [18]):
store the parameters contained within this IE (see 10.3.7.86 for details), and use them to decipher the broadcast UE positioning GPS information contained within the System Information Block types 15.1, 15.2 and 15.3;
- use IE "Reference Location" as a priori knowledge of the approximate location of the UE;
- if the IE "NODE B Clock Drift" is included:
 - use it as an estimate of the drift rate of the NODE B clock relative to GPS time;
- if the IE "NODE B Clock Drift" is not included:
 - assume the value 0;
- if SFN is included:
 - use it as the relationship between GPS time and air-interface timing of the NODE B transmission in the serving cell;
- use "Reference GPS TOW" as GPS Time of Week which is the start of the frame with SFN=0;

Note: For efficiency purposes, the UTRAN should broadcast SIB 15 if it is broadcasting SIB 15.2.

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Correction on Area Scope of SIB 15.3		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 25 May, 01
Category:	⌘ F	Release:	⌘ R99
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	F (correction)		2 (GSM Phase 2)
	A (corresponds to a correction in an earlier release)		R96 (Release 1996)
	B (addition of feature),		R97 (Release 1997)
	C (functional modification of feature)		R98 (Release 1998)
	D (editorial modification)		R99 (Release 1999)
	Detailed explanations of the above categories can be found in 3GPP TR 21.900 .		REL-4 (Release 4)
			REL-5 (Release 5)

Reason for change:	⌘ Wrong area scope for SIB 15.3.
	This CR is backward compatible since it is only affects UE positioning.
Summary of change:	⌘ Change the area scope of SIB 15.3 from cell to PLMN
Consequences if not approved:	⌘ It would lead to unnecessary inconsistency

Clauses affected:	⌘ 13.4.32	
Other specs affected:	⌘ <input type="checkbox"/> Other core specifications	⌘
	<input type="checkbox"/> Test specifications	
	<input type="checkbox"/> O&M Specifications	
Other comments:	⌘	

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

CHANGE REQUEST

⌘ **25.331** **CR 871** ⌘ ev **r1** ⌘ Current version: **3.6.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Correction to for AICH Power Offset		
Source:	⌘ TSG-RAN WG2		
Work item code:	⌘ TEI	Date:	⌘ 24 May 2001
Category:	⌘ F	Release:	⌘ R99
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	F (correction)		2 (GSM Phase 2)
	A (corresponds to a correction in an earlier release)		R96 (Release 1996)
	B (addition of feature),		R97 (Release 1997)
	C (functional modification of feature)		R98 (Release 1998)
	D (editorial modification)		R99 (Release 1999)
	Detailed explanations of the above categories can be found in 3GPP TR 21.900.		REL-4 (Release 4)
			REL-5 (Release 5)

Reason for change:	⌘ The AICH Power offset parameter in SIB Type 5 is also used to set the power offsets for AP-AICH and CD/CA-ICH. This is not clear in specification.
Summary of change:	⌘ Note is added to tabular description of SIB Types 5 and 6 and a note is added to the AICH Power offset IE.
Consequences if not approved:	⌘ Current text may lead to misunderstanding of the specification.

Clauses affected:	⌘ 10.2.48.8.8, 10.2.48.8.9, 10.3.6.3		
Other specs affected:	⌘ <input type="checkbox"/> Other core specifications	⌘ <input type="checkbox"/>	⌘ <input type="checkbox"/>

10.2.48.8.8 System Information Block type 5

The system information block type 5 contains parameters for the configuration of the common physical channels in the cell.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SIB6 Indicator	MP		Boolean	TRUE indicates that SIB6 is broadcast in the cell.
PhyCH information elements				
PICH Power offset	MP		PICH Power offset 10.3.6.50	
CHOICE <i>mode</i>	MP			
>FDD				
>>AICH Power offset	MP		AICH Power offset 10.3.6.3	<u>This AICH Power offset also indicates the power offset for AP-AICH and for CD/CA-ICH.</u>
>TDD				
>>PUSCH system information	OP		PUSCH system information 10.3.6.66	
>>PDSCH system information	OP		PDSCH system information 10.3.6.46	
>>TDD open loop power control	MP		TDD open loop power control 10.3.6.79	
Primary CCPCH info	OP		Primary CCPCH info 10.3.6.57	Note 1
PRACH system information list	MP		PRACH system information list 10.3.6.55	
Secondary CCPCH system information	MP		Secondary CCPCH system information 10.3.6.72	
CBS DRX Level 1 information	CV CTCH		CBS DRX Level 1 information 10.3.8.3	

NOTE 1: DL scrambling code of the Primary CCPCH is the same as the one for Primary CPICH (FDD only).

Condition	Explanation
CTCH	The IE is mandatory if the IE "CTCH indicator" is equal to TRUE for at least one FACH, otherwise the IE is not needed in the message

10.2.48.8.9 System Information Block type 6

The system information block type 6 contains parameters for the configuration of the common and shared physical channels to be used in connected mode.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
PhyCH information elements				
PICH Power offset	MP		PICH Power offset 10.3.6.50	
CHOICE <i>mode</i>	MP			
>FDD				
>>AICH Power offset	MP		AICH Power offset 10.3.6.3	<u>This AICH Power offset also indicates the power offset for AP-AICH and for CD/CA-ICH .</u>
>>CSICH Power offset	OP		CSICH Power offset 10.3.6.15	
>TDD				
>>PUSCH system information	OP		PUSCH system information 10.3.6.66	
>>PDSCH system information	OP		PDSCH system information 10.3.6.46	
>>TDD open loop power control	MP		TDD open loop power control 10.3.6.79	
Primary CCPCH info	OP		Primary CCPCH info 10.3.6.57	Note 1
PRACH system information list	OP		PRACH system information list 10.3.6.55	
Secondary CCPCH system information	OP		Secondary CCPCH system information 10.3.6.72	
CBS DRX Level 1 information	CV CTCH		CBS DRX Level 1 information 10.3.8.3	

NOTE 1: DL scrambling code of the Primary CCPCH is the same as the one for Primary CPICH (FDD only).

Condition	Explanation
CTCH	The IE is mandatory if the IE "CTCH indicator" is equal to TRUE for at least one FACH, otherwise the IE is not needed

10.3.6.3 AICH Power offset

NOTE: Only for FDD.

This parameter is used to indicate the power level of AICH, AP-AICH and CD/CA-ICH channels. This is the power per transmitted Acquisition Indicator, AP Acquisition Indicator or CD/CA Indicator minus power of the Primary CPICH.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
AICH Power offset	MP		Integer(-22..+5)	Offset in dB
