Title: Iur-g way forward in RAN

Agenda item: **10.2**

Document for: APPROVAL

TSG GERAN has been working on Iur-g interface under TSG GERAN WI, "Iur-g interface" and the results are captured in 3GPP TR 43.930 v0.2.1. According to the work plan of TSG GERAN, this WI will be completed as part of Release 5 in TSG GERAN meeting #9 (April 15th-19th). It is expected that this WI will require CRs to TS 25.423, TS 25.401 and TS 25.420.

Considering TSG GERAN schedule, TSG RAN WG3 is supposed to receive all necessary information (including TR and draft CRs) at RAN3 #28 or RAN3 #29. Therefore it is proposed that TSG RAN WG3 review corresponding CRs and include the necessary modifications in their specifications during RAN3 meetings #28 & #29 to be able to approve these CRs in TSG RAN #16.

It is proposed to cover this issue in the reporting for TSG SA in the TSG RAN Chairman's report.
