

TSG-RAN meeting #17
Biarritz, France, 3rd – 6th September 2002

RP-020667

Source: Qualcomm, Motorola, Nokia, Ericsson, Panasonic
Title: Way forward on layer 3 filtering
Agenda item: 7.2.2
Document for: Discussion and decision

Two proposals to clarify the Layer 3 filtering were presented in documents RP-020564, RP-020595. Some simulation results were also presented in documents RP-020635, RP-020641. Based on subsequent discussions the following proposals have been formulated:

- Both solutions (described in documents RP-020564, RP-020595) should be considered acceptable for R'99, and therefore it is not necessary to clarify this in R'99 and this decision will not be revisited for R'99.
- A single solution will be used in later releases (at the latest for Rel-5) for specific measurements. RAN4 will recommend which are the measurements for which a single solution is deemed necessary.
- For the future releases (at the latest for Rel-5) a solution shall be chosen at RAN #18 and RAN4 is tasked to ensure a decision can be made.
