Subject: Definition and range of physical channel BER

Work item:

Category: *(only one category shall be marked with an X)*

F	Correction	X	**Release:**	Phase 2	
A	Corresponds to a correction in an earlier release			Release 96	
B	Addition of feature			Release 97	
C	Functional modification of feature			Release 98	
D	Editorial modification			Release 99	X
				Release 00	

Reason for change:

TS25.215v310 does not define uniquely at which point the physical channel BER of Type 1 measurement on the DPDCH is measured and how a physical channel BER estimate is supposed to calculate. The CR will clarify the definition of BER for UTRAN by setting the exact point for measurement and, as a consequence of the point, rename Type 1 BER the tranport channel BER, denoted by TrCH BER. Also the fact that the tranport channel BER is required to measure for TrCH's with channel coding only is pointed out.
Furthermore, the definition of Type 2 BER on DPCCH will be clarified. This is put into a separate section 5.2.7.

The number of bits for mapping of the physical channel BER and the transport channel BER is expanded to 8 bits, and the range of them is shortened because mapping described in 25.215 version 3.1.0 is too rough to achieve useful outer loop TPC performance.

5.2.5 Transport channel BLER

Definition	Estimation of the transport channel block error rate (BLER). The BLER estimation shall be based on evaluating the CRC on each transport block. Measurement shall be possible to perform on any transport channel after RL combination in Node B. BLER estimation is only required for transport channels containing CRC.
Range/mapping	The Transport channel BLER shall be reported for 0 ≤ Transport channel BLER ≤ 1 in the unit BLER_dB where: BLER_dB_00: Transport channel BLER = 0 BLER_dB_01: -∞ < Log10(Transport channel BLER) < -4.03 BLER_dB_02: -4.03 ≤ Log10(Transport channel BLER) < -3.965 BLER_dB_03: -3.965 ≤ Log10(Transport channel BLER) < -3.9 ... 5.2.6 Transport~~Physical~~ channel BER

Definition	~~Type 1:~~ ~~Measured on the DPDCH:~~ The ~~physical~~transport channel BER is an estimation of the average bit error rate (BER)) of RL-combined DPDCH data. The transport channel (TrCH) BER is measured from the data considering only non-punctured bits ~~before~~ at the input of the channel decoder~~ing of the DPDCH data after RL combination.~~ in Node B. It shall be possible to report an estimate of the transport channel BER for a TrCH after the end of each TTI of the TrCH. The reported TrCH BER shall be an estimate of the BER during the latest TTI for that TrCH. Transport channel BER is only required to be reported for TrCHs that are channel coded. ~~Type 2:~~ ~~Measured on the DPCCH:~~ ~~The Physical channel BER is an estimation of the average bit error rate (BER) on the DPCCH after RL combination in Node B.~~ ~~It shall be possible to report a physical channel BER estimate of type 1 or of type 2 or of both types at the end of each TTI for the transferred TrCh's, e.g. for TrCh's with a TTI of x ms a x ms averaged physical channel BER shall be possible to report every x ms.~~
Range/mapping	The Transport~~Physical~~ channel BER shall be reported for 0 ≤ Transport~~Physical~~ channel BER ≤ 1 in the unit TrCh_BER_LOG~~dB~~ where: TrCh_BER_LOG~~dB~~_000: Transport~~Physical~~ channel BER = 0 TrCh_BER_LOG~~dB~~_001: -∞ < Log10(Transport~~Physical~~ channel BER) < -2.06375~~4.03~~ TrCh_BER_LOG~~dB~~_002: -2.06375~~4.03~~ ≤ Log10(Transport~~Physical~~ channel BER) < -2.055625~~3.965~~ TrCh_BER_LOG~~dB~~_003: -2.055625~~3.965~~ ≤ Log10(Transport~~Physical~~ channel BER) < -2.0475~~3.9~~ ... 5.2.7 Physical channel BER

Definition	The Physical channel BER is an estimation of the average bit error rate (BER) on the DPCCH after RL combination in Node B. An estimate of the Physical channel BER shall be possible to be reported after the end of each TTI of any of the transferred TrCHs. The reported physical channel BER shall be an estimate of the BER during the latest TTI.
Range/mapping	The physical channel BER shall be reported for 0 ≤ Physical channel BER ≤ 1 in the unit PhCh_BER_LOG where: PhCh_BER_LOG_000: Physical channel BER = 0 PhCh_BER_LOG_001: -∞ < Log10(Physical channel BER) < -2.06375 PhCh_BER_LOG_002: -2.06375≤ Log10(Physical channel BER) < -2.055625 PhCh_BER_LOG_003: -2.055625 ≤ Log10(Physical channel BER) < -2.0475 ... 5.2.8~~7~~ Round trip time

NOTE: The relation between this measurement and the TOA measurement defined by WG2 needs clarification.

Definition	Round trip time (RTT), is defined as RTT = T_{RX} – T_{TX}, where T_{TX} = The time of transmission of the beginning of a downlink DPCH frame to a UE. T_{RX} = The time of reception of the beginning (the first significant path) of the corresponding uplink DPCCH/DPDCH frame from the UE. Note: The definition of "first significant path" needs further elaboration. Measurement shall be possible on DPCH for each RL transmitted from an UTRAN access point and DPDCH/DPCCH for each RL received in the same UTRAN access point.
Range/mapping	The Round trip time is given with the resolution of 0.25 chip with the range [876, …, 2923.75] chips.
