

TSG-RAN Working Group 1, meeting #16
Pusan, Korea, 10th – 13th October 2000

TSGR1#16(00)1281

Source: Ericsson
To: TSG RAN WG2, TSG RAN WG4
Title: Draft LS on compressed mode patterns

Contact Person: Dirk Gerstenberger (Dirk.Gerstenberger@era.ericsson.se)

RAN WG1 has discussed the support of parallel compressed mode patterns during its 16th meeting, where changes to the 25.215 specification have been agreed as shown below.

RAN WG1 has adopted the breakdown of measurement purposes for GSM measurements (GSM carrier RSSI measurement, Initial BSIC identification, BSIC re-confirmation) as proposed by RAN WG4. A reference to the relevant GSM specification was added for BSIC measurements.

Further, RAN WG1 has removed section 6.1.1.3 in 25.215, since it was found that the contained information was already in 25.133 (regarding the TGL values) and in 25.212 (regarding the combinations of single and double frame method).

RAN WG1 would kindly like to ask RAN WG4 and RAN WG4 to consider these changes when continuing their work on the compressed mode measurement purposes.

The RAN WG1 change request (R1-00-1291) is attached to the LS.
