

Source : TSG RAN WG2

Object : LS to TSG RAN WG1

TSG RAN WG2 had its first meeting 20-22nd of January 1999 in Helsinki. WG2 would like to inform WG1 of the status of its works after that first meeting.

Firstly, a documentation structure has been agreed for WG2, provided in the attached "Work plan and deliverables" document.

Also, contributions from ETSI and ARIB/TTC were made for the deliverables of WG2, and the merging of these documents has been performed. This means that a first version of all the documents listed in the deliverables is available. It should be noted that the work was carried very smoothly with a very good co-operation from all parties, and could be made in less than two days.

WG1 can also note the agreed work plan for WG2 and the dates for the future meetings in the attached document.

WG2 would welcome the opinion of WG1 on whether the work plan and the deliverables of WG2 are in line with the equivalent status in WG1. In particular, on document S2.02, WG2 has identified a dependency with the work in WG1, and would like to hear the opinion of WG1 on the proposed approval dates for this document.
