Title: Answer on Liaison Statements regarding MExE support of handover notifications and QoS negotiation

RAN3 thanks T2 MExE for the liaison statements on MExE support of handover notifications (tdoc T2X99101) and QoS negotiation (tdoc T2X99100).

RAN3 has not studied any potential need for MExE support so far. However, RAN3's current assumption is that any signalling required for the network to notify a MExE device of handovers is a RAN2 issue.

Regarding any potential signalling required for QoS negotiation it is RAN3's assumption that this signalling would belong to the non-access stratum, and hence would be a CN1 and SA2 issue.
