Title:	⌘	1.28Mcps TDD
Source:	⌘	TSG-RAN WG2
Work item code:	⌘	LCRTDD-L23
Date:	⌘	15.1.2001
Category:	⌘	**B**
Release:	⌘	REL-4

Use one of the following categories:
F *(essential correction)*
A *(corresponds to a correction in an earlier release)*
B *(Addition of feature),*
C *(Functional modification of feature)*
D *(Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:
2 *(GSM Phase 2)*
R96 *(Release 1996)*
R97 *(Release 1997)*
R98 *(Release 1998)*
R99 *(Release 1999)*
REL-4 *(Release 4)*
REL-5 *(Release 5)*

Reason for change:	⌘	In 1.28Mcps TDD, timing advance control is maintained by L1 function Uplink Synchronization , thus timing advance as RRC functionality is not needed in 1.28Mcps TDD.
Summary of change:	⌘	In section 5.4.2, it is clarified that RRC function timing advance control is only applicable for 3.84 Mcps TDD.
Consequences if not approved:	⌘	

Clauses affected:	⌘	5.4.2		
Other specs affected:	⌘	**X** Other core specifications ☐ Test specifications ☐ O&M Specifications	⌘	25.331
Other comments:	⌘			

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

5.4.2 RRC functions

The Radio Resource Control (RRC) layer handles the control plane signalling of Layer 3 between the UEs and UTRAN. The RRC performs the following functions:

- **Broadcast of information provided by the non-access stratum (Core Network).** The RRC layer performs system information broadcasting from the network to all UEs. The system information is normally repeated on a regular basis. The RRC layer performs the scheduling, segmentation and repetition. This function supports broadcast of higher layer (above RRC) information. This information may be cell specific or not. As an example RRC may broadcast Core Network location service area information related to some specific cells.

- **Broadcast of information related to the access stratum.** The RRC layer performs system information broadcasting from the network to all UEs. The system information is normally repeated on a regular basis. The RRC layer performs the scheduling, segmentation and repetition. This function supports broadcast of typically cell-specific information.

- **Broadcast of ODMA relay node neighbour information.** The RRC layer performs probe information broadcasting to allow ODMA routeing information to be collected.

- **Establishment, re-establishment, maintenance and release of an RRC connection between the UE and UTRAN.** The establishment of an RRC connection is initiated by a request from higher layers at the UE side to establish the first Signalling Connection for the UE. The establishment of an RRC connection includes an optional cell re-selection, an admission control, and a layer 2 signalling link establishment. The release of an RRC connection can be initiated by a request from higher layers to release the last Signalling Connection for the UE or by the RRC layer itself in case of RRC connection failure. In case of connection loss, the UE requests re-establishment of the RRC connection. In case of RRC connection failure, RRC releases resources associated with the RRC connection.

- **Collating ODMA neighbour list and gradient information.** The ODMA relay node neighbour lists and their respective gradient information will be maintaining by the RRC.

- **Maintenance of number of ODMA relay node neighbours.** The RRC will adjust the broadcast powers used for probing messages to maintain the desired number of neighbours.

- **Establishment, maintenance and release of a route between ODMA relay nodes.** The establishment of an ODMA route and RRC connection based upon the routeing algorithm.

- **Interworking between the Gateway ODMA relay node and the UTRAN.** The RRC layer will control the interworking with the standard TDD or FDD communication link between the Gateway ODMA relay node and the UTRAN.

- **Establishment, reconfiguration and release of Radio Bearers.** The RRC layer can, on request from higher layers, perform the establishment, reconfiguration and release of Radio Bearers in the user plane. A number of Radio Bearers can be established to an UE at the same time. At establishment and reconfiguration, the RRC layer performs admission control and selects parameters describing the Radio Bearer processing in layer 2 and layer 1, based on information from higher layers.

- **Assignment, reconfiguration and release of radio resources for the RRC connection.** The RRC layer handles the assignment of radio resources (e.g. codes, CPCH channels) needed for the RRC connection including needs from both the control and user plane. The RRC layer may reconfigure radio resources during an established RRC connection. This function includes coordination of the radio resource allocation between multiple radio bearers related to the same RRC connection. RRC controls the radio resources in the uplink and downlink such that UE and UTRAN can communicate using unbalanced radio resources (asymmetric uplink and downlink). RRC signals to the UE to indicate resource allocations for purposes of handover to GSM or other radio systems.

- **RRC connection mobility functions.** The RRC layer performs evaluation, decision and execution related to RRC connection mobility during an established RRC connection, such as handover, preparation of handover to GSM or other systems, cell re-selection and cell/paging area update procedures, based on e.g. measurements done by the UE**.**

- **Paging/notification.** The RRC layer can broadcast paging information from the network to selected UEs. Higher layers on the network side can request paging and notification. The RRC layer can also initiate paging during an established RRC connection.

- **Routing of higher layer PDUs.** This function performs at the UE side routing of higher layer PDUs to the correct higher layer entity, at the UTRAN side to the correct RANAP entity.

- **Control of requested QoS**. This function shall ensure that the QoS requested for the Radio Bearers can be met. This includes the allocation of a sufficient number of radio resources.

- **UE measurement reporting and control of the reporting.** The measurements performed by the UE are controlled by the RRC layer, in terms of what to measure, when to measure and how to report, including both UMTS air interface and other systems. The RRC layer also performs the reporting of the measurements from the UE to the network.

- **Outer loop power control.** The RRC layer controls setting of the target of the closed loop power control.

- **Control of ciphering.** The RRC layer provides procedures for setting of ciphering (on/off) between the UE and UTRAN. Details of the security architecture are specified in [15].

- **Slow DCA**. Allocation of preferred radio resources based on long-term decision criteria. It is applicable only in TDD mode.

- **Arbitration of radio resources on uplink DCH**. This function controls the allocation of radio resources on uplink DCH on a fast basis, using a broadcast channel to send control information to all involved users.

NOTE: This function is implemented in the CRNC.

- **Initial cell selection and re-selection in idle mode.** Selection of the most suitable cell based on idle mode measurements and cell selection criteria.

- **Integrity protection.** This function adds a Message Authentication Code (MAC-I) to those RRC messages that are considered sensitive and/or contain sensitive information. The mechanism how the MAC-I is calculated is described in TS 33.105 [14].

- **Initial Configuration for CBS**
  This function performs the initial configuration of the BMC sublayer.

- **Allocation of radio resources for CBS**
  This function allocates radio resources for CBS based on traffic volume requirements indicated by BMC. The radio resource allocation set by RRC (i.e. the schedule for mapping of CTCH onto FACH/S-CCPCH) is indicated to BMC to enable generation of schedule messages. The resource allocation for CBS shall be broadcast as system information.

- **Configuration for CBS discontinuous reception**
  This function configures the lower layers (L1, L2) of the UE when it shall listen to the resources allocated for CBS based on scheduling information received from BMC.

- **Timing advance control.** The RRC controls the operation of timing advance. It is applicable only in 3.84 Mcps TDD ~~mode~~.

3GPP RAN WG2 Meeting #19 ***R2-010564***

Reason for change: ⌘ This CR collects the changes necessary for introducing 1.28Mcps TDD in TS25.302.

Summary of change: ⌘
- Tables for UE simultaneous physical channel combinations in section 8 are updated in order to support 1.28 Mcps TDD.
- Parameters for Access Information and Physical Channel Description are updated in order to support 1.28 Mcps TDD.
- Revision 2 contains a clarification to the section of UE simultaneous physical channel combinations. A companion CR updates tables 8.3 and 8.4 in order to clarify the combinations of physical channels that can be supported in the TDD 3.84 Mcps option. This CR provides companion tables that indicate the combinations of physical channels that can be supported in the TDD 1.28 Mcps option. Additionally, Received SYNC_UL Timing Deviation is added to section 9.3 to support 1.28 Mcps TDD measurement for propagation delay.

Consequences if not approved: ⌘

Clauses affected: ⌘ 8.3, 8.4, 9.3.x (new), 10.3.3, 10.3.5.3, 10.3.5.4, 10.3.5.5, 10.3.5.7, 10.3.5.8, 10.3.5.10, 10.3.5.16, 10.3.5.17, 10.3.5.18 (new), 10.3.5.19 (new), 10.3.5.20 (new)

Other specs affected: ⌘
☐ Other core specifications ⌘
☐ Test specifications
☐ O&M Specifications

Other comments:	⌘	According to WG1 decision, UpPTS and DwPTS are now called UpPCH and DwPCH, SYNC_1 and SYNC are now called SYNC_UL and SYNC_DL.

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8 UE Simultaneous Physical Channels combinations

This clause describes the requirements from the UE to send and receive on multiple Transport Channels, which are mapped on different physical channels simultaneously depending on the service capabilities and requirements. The clause will describe the impacts on the support for multiple services (e.g. speech call and SMS-CB) depending on the UE capabilities.

8.3 TDD Uplink

8.3.1 3.84 Mcps TDD Uplink

The table describes the possible combinations of 3.84Mcps TDD physical channels that can be supported in the uplink by one UE in any one 10ms frame, where a 3.84Mcps TDD physical channel corresponds to one code, one timeslot, one frequency and is mapped to one resource unit (RU). This table addresses combinations of uplink physical channels in the same 10ms frame.

Table 3: 3.84Mcps TDD Uplink

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
1	PRACH	RACH	Mandatory	One RACH transport channel maps to one PRACH physical channel.
2	One or more DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities.
3	PRACH + one or more DPCH	RACH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	One RACH transport channel maps to one PRACH physical channel The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities.
4	One or more PUSCH	One or more USCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	It is assumed here that a USCH transport channel may map to one or more PUSCH physical channels based on system configuration. USCH requires a control channel (RACH or DCH); however, it is not required to be in the same 10ms frame as the USCH.
5	PRACH + one or more PUSCH	RACH + One or more USCH coded on to one or more CCTrCH	Depending on UE radio access capabilities	One RACH transport channel maps to one PRACH physical channel. It is assumed here that a USCH transport channel may map to one or more PUSCH physical channels based on system configuration.
6	One or more PUSCH + one or more DPCH	One or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. It is assumed here that a USCH transport channel may map to one or more PUSCH physical channels based on system configuration.
7	PRACH + one or more PUSCH + one or more DPCH	RACH + one or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	One RACH transport channel maps to one PRACH physical channel. The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. It is assumed here that a USCH transport channel may map to one or more PUSCH physical channels based on system configuration.

8.3.2 1.28 Mcps TDD Uplink

The table addresses the possible combinations of 1.28 Mcps TDD physical channels that can be supported in the uplink by one UE simultaneously on the same frequency in the TDD 1.28 Mcps option in any one 5 ms subframe. In 1.28Mcps TDD a physical channel corresponds to one code, one timeslot, one frequency.

Table 4: 1.28 Mcps TDD Uplink

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
1	UpPCH	N/A	Mandatory	UpPCH is used to establish the uplink synchronisation.
2	PRACH	RACH	Mandatory	
3	UpPCH + One DPCH	One or more DCH coded into a single CCTrCH	Mandatory	One DPCH is needed as reference measurement channel. UpPCH transmission to target cell in case of handover.
4	One DPCH	One or more DCH coded into a single CCTrCH	Mandatory	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities This combination is required for the reference measurement channel.
5	More than one DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities.
6	UpPCH+ one or more DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
7	PRACH + one or more DPCHs	RACH + one or more DCH coded into one or more than one CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
8	One or more PUSCH	One or more USCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This configuration is required for UE that operate shared channels.
9	UpPCH + one or more PUSCH	One or more USCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This combination may be used for shared channel operation only.
10	PRACH + one or more PUSCH	RACH + One or more USCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This combination may be used for shared channel operation only
11	One or more PUSCH + one or more DPCH	One or more USCH coded onto one or more CCTrCH + one or more DCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
12	UpPCH + one or more PUSCH + one or more DPCH	One or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. This combination may be used for shared channel operation.
13	PRACH + one or more PUSCH + one or more DPCH	RACH + one or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. This combination may be used for shared channel operation.

~~8.4~~8.4 TDD Downlink

8.4.1 3.84 Mcps TDD Downlink

The table describes the possible combinations of 3.84Mcps TDD physical channels that can be supported in the downlink by one UE in any one 10ms frame, where a 3.84Mcps TDD physical channel corresponds to one code, one timeslot, one frequency and is mapped to one resource unit (RU). This table addresses combinations of downlink physical channels in the same 10ms frame.

Table 45: 3.84 Mcps TDD Downlink

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
1	P-CCPCH and/or One or more S-CCPCH + PICH	BCH and/or PCH and/or one or more FACH	Mandatory	BCH maps to the P-CCPCH in a frame. FACH can map to multiple S-CCPCH in a frame. PCH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
2	One or more DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities.
3	P-CCPCH and/or One or more S-CCPCH + PICH + one or more DPCH	BCH and/or PCH and/or one or more FACH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The number of DCHs and the maximum channel bit rate are dependent on the UE radio access capabilities. BCH maps to the P-CCPCH in a frame. FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
4	One or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	It is assumed here that a DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. DSCH requires a control channel (FACH or DCH); however, it is not required to be in the same 10ms frame as the DSCH.
5	One or more PDSCH + P-CCPCH and/or one or more S-CCPCH + PICH	BCH and/or PCH and/or one or more FACH + one or more DSCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	BCH maps to the P-CCPCH in a frame. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. It is assumed here that a DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. For the case of DSCH + BCH, DSCH requires a control channel (FACH or DCH); however, it is not required to be in the same 10ms frame as the DSCH.
6	One or more PDSCH + one or more DPCH	One or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. It is assumed here that a DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
7	One or more PDSCH + P-CCPCH and/or one or more S-CCPCH + PICH + one or more DPCH	BCH and/or PCH and/or one or more FACH + one or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	BCH maps to the P-CCPCH in a frame. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. It is assumed here that a DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.
NOTE: Reference: TS 25.221: Physical Channels and Mapping of Transport Channels Onto Physical Channels (TDD).				

8.4.2 1.28 Mcps TDD Downlink

The table addresses the possible combinations of 1.28 Mcps TDD physical channels that can be supported in the downlink by one UE simultaneously on the same frequency in any one 5ms subframe. In 1.28Mcps TDD a physical channel corresponds to one code, one timeslot, one frequency.

Depending on UE radio capabilities UEs may be required to occassionally decode P-CCPCH of its own cell in the following Physical Channel Combinations: 5, 11,12,13,14,15,16,17.

To support handover it depends on UE capabilities if a UE can support the occasional decoding of neighbour cell P-CCPCH in the physical channel combinations 8, 9, 10, 11, 15,16, 17

Table 6: 1.28 Mcps TDD Downlink

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
1	FPACH	N/A	Mandatory	FPACH is used to answer the UE and to adjust the timing and synchronization shift of the UE
2	P-CCPCH	BCH	Mandatory	
3	S-CCPCH	FACH or/and PCH	Mandatory	
4	P-CCPCH +S-CCPCH	BCH + (FACH or/and PCH)	Mandatory	
5	More than one S-CCPCH	one or more FACH+ one ore more PCH	Depending on UE capabilities	
6	PICH	N/A	Mandatory	
7	FPACH + P-CCPCH + none, one or more S-CCPCH	BCH + (none,one or more FACH+ none.one ore more PCH)	Depending on UE capabilities	
8	2 DPCH	One or more DCH coded into a single CCTrCH	Mandatory	The maximum number of DCH and the maximum channel bit rate are dependent on UE radio access capabilities This channel is used as reference measurement channel
9	One or more DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities.

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
10	FPACH + one or more DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	FPACH is used to answer the UE and to adjust the timing and synchronization shift of the UE. The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
11	One or more S-CCPCH + one or more DPCH	(One or more FACH or/and PCH) + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
12	One or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This configuration is required for UE that operate shared channels.
13	FPACH + one or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This configuration is desirable but not essential for UE supporting shared channels.
14	One or more S-CCPCH +one or more PDSCH	(One or more FACH and/or PCH) + One or more DSCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This configuration is desirable but not essential for UE supporting shared channels.
15	One or more PDSCH + one or more DPCH	One or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
16	FPACH + one or more PDSCH + one or more DPCH	one or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities.	FPACH is used to answer the UE and to adjust the timing and synchronization shift of the UE. This configuration is desirable but not essential for UE supporting shared channels and dedicated channels simultaneously.
17	One or more S-CCPCH + one or more PDSCH + one or more DPCH	(One or more FACH and/or PCH) + one or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities.	This configuration is desirable but not essential for UE supporting shared channels and dedicated channels simultaneously.

9.3 UTRAN Measurements

9.3.x Received SYNC_UL Timing Deviation

Measurement	Received SYNC_UL Timing Deviation
Source	L1 (Node B)
Destination	RRC (RNC)
Reporting Trigger	Event triggered
Definition	'Received SYNC_UL Timing Deviation' is the time difference $UpPCH_{POS} = UpPTS_{Rxpath} - UpPTS_{TS}$ Where -$UpPTS_{Rxpath}$: time of the reception in the Node B of the SYNC_UL to be used in the uplink synchronization process -$UpPTS_{TS}$: time instance two symbols prior to the end of the DwPCH according to the Node B internal timing

10.3 Parameter definition

10.3.1 Error code

- Hardware failure.

10.3.2 Event value

- Maximum transmission power has been reached.
- Allowable transmission power has been reached.
- Average transmission power is below allowable transmission power.
- Loss of DL DPCCH.
- Completion of CPCH Emergency stop.
- CPCH Start of Message Indicator was received.
- CPCH Start of Message Indicator was not received.
- Maximum number of frames for CPCH transmission has been reached.
- End of Frame for CPCH transmission has been received.

10.3.3 Access Information

- ~~-~~Ready for RACH data transmission (in case of FDD mode: when Ack on AICH has been received, in case of 1.28 Mcps TDD: when Ack on FPACH has been received).
- timeout, no response on AICH (FDD only) or AP-AICH (FDD only) or FPACH (1.28 Mcps TDD only) has been received while maximum number of access preamble transmissions (FDD only) /synchronisation attempts (1.28 Mcps TDD only) has been performed;

The following values of this parameter apply to FDD only:

- NACK on AICH or AP-AICH has been received;
- ~~timeout, no response on AICH or AP-AICH has been received while maximum number of access preamble transmissions has been performed;~~
- ready for CPCH data transmission (CD or CD/CA information received on CD/CA-ICH);
- mismatch of CD/CA-ICH signatures;
- no response on CD/CA-ICH received;
- timeout, no CD/CA-ICH received.

10.3.4 Transport Format Subset

- A subset of the Transport Format set of a Transport Channel.

10.3.5 Physical channel description

10.3.5.1 Primary SCH

- Tx diversity mode.

10.3.5.2 Secondary SCH

- Tx diversity mode.

10.3.5.3 Primary CCPCH

- Frequency info.
- DL scrambling code.
- Tx diversity mode.
- Timeslot (TDD only).
- Burst type (3.84 Mcps TDD only).
- Offset (TDD only).
- Repetition period (TDD only).
- Repetition length (TDD only).

10.3.5.4 Secondary CCPCH

- DL scrambling code.
- Channelisation code.
- Tx diversity mode.
- Timeslot (TDD only).
- Burst type (3.84 Mcps TDD only).
- Midamble shift (TDD only).
- Offset (TDD only).
- Repetition period (TDD only).
- Repetition length (TDD only).
- TFCI presence (TDD only).

10.3.5.5 PRACH

- Access Slot (FDD only).
- Preamble spreading code (FDD only).
- Preamble signature (FDD only).
- Spreading factor for data part.
- Power control info:
  - UL target SIR;
  - primary CCPCH DL TX Power;
  - UL interference;
  - power offset (Power ramping) (FDD only).
- Access Service Class Selection:

  - preamble signature classification information (FDD only).
- AICH transmission timing parameter (FDD only).
- Timeslots (TDD only).
- Spreading codes (TDD only).
- Midamble codes (TDD only).

10.3.5.6 Uplink DPDCH+DPCCH

- UL scrambling code.
- DPCCH Gate rate.
- DPCCH slot structure (N_{pilot}, N_{TPC}, N_{TFCI}, N_{FBI}).
- Transmission Time offset value.

10.3.5.7 Uplink DPCH

- Timing Advance (TDD only).
- DPCH channelisation code (TDD only).
- Burst Type (3.84 Mcps TDD only).
- DPCH midamble shift (TDD only).
- Timeslot (TDD only).
- Offset (TDD only).
- Repetition Period (TDD only).
- Repetition length (TDD only).
- TFCI presence (TDD only).

10.3.5.8 Downlink DPCH

- Transmission Time offset value.
- DPCCH Gate rate (FDD only).
- DL scrambling code:
  - DL Channelisation code.
- Tx diversity mode:
  - FB mode (FDD only).
- Slot structure ($N_{pilot,}$ N_{TPC}, N_{TFCI}, $N_{FBI,}$, N_{data1}, N_{data2}) (FDD only).
- Special slot structure only for CPCH ($N_{pilot,}$ N_{TPC}, N_{TFCI}, N_{CCC}) (FDD only)
- Burst Type (3.84 Mcps TDD only).
- DPCH midamble shift (TDD only).
- Timeslot (TDD only).
- Offset (TDD only).
- Repetition period (TDD only).

- Repetition length (TDD only).
- TFCI presence (TDD only).

10.3.5.9 PCPCH (Physical Common Packet Channel)

- CPCH Set ID to which this PCPCH belongs.
- Parameters related to the AP preamble:
  - Access Preamble (AP) scrambling code;
  - available AP signatures/subchannels for access request;
- Parameters related to the CD preamble:
  - CD preamble scrambling code;
  - available CD signatures/subchannels;
- Parameters related to PCPCH message part:
  - PCPCH scrambling code;
  - PCPCH Channelisation code;
  - data rate (spreading factor);
  - N_frames_max: Maximum length of CPCH message in radio frames.

10.3.5.10 PICH

- Scrambling code.
- Channelisation code.
- Timeslot (TDD only).
- Burst Type (3.84 Mcps TDD only).
- Midamble shift (TDD only).
- Offset (TDD only).
- Repetition period (TDD only).
- Repetition length (TDD only).

10.3.5.11 AICH

- Scrambling code.
- Channelisation code.
- Tx diversity mode.

NOTE: The value for the parameters needs to be consistent with the corresponding PRACH.

10.3.5.12 AP-AICH

- CPCH Set ID.
- Scrambling code.
- Channelisation code.

- Tx diversity mode.

10.3.5.13 CD-ICH

- CPCH Set ID.
- Scrambling code.
- Channelisation code.
- Tx diversity mode.

NOTE: This physical channel is used in conjunction with PCPCH when UE Channel Selection is active.

10.3.5.14 CD/CA-ICH

- CPCH Set ID.
- Scrambling code.
- Channelisation code.
- Tx diversity mode.

NOTE: This physical channel is used in conjunction with PCPCH when Channel Assignment is active.

10.3.5.15 CSICH

- CPCH Set ID.
- Scrambling code.
- Channelisation code.
- Tx diversity mode.

NOTE: The values for the parameters need to be consistent with the AP-AICH which is time-multiplexed with this CSICH.

10.3.5.16 PDSCH

- Scrambling code.
- Channelisation code.
- Tx diversity mode:
  - FB mode (FDD only).
- DL channelisation code (TDD only).
- Burst Type (3.84 Mcps TDD only).
- PDSCH Midamble shift (TDD only).
- Timeslot (TDD only).
- Offset (TDD only).
- Repetition period (TDD only).
- Repetition length (TDD only).
- TFCI presence (TDD only).

10.3.5.17 PUSCH

- PUSCH channelisation code.
- Burst Type (3.84 Mcps TDD only).
- PUSCH midamble shift (TDD only).
- Timeslot (TDD only).
- Offset (TDD only).
- Repetition period (TDD only).
- Repetition length (TDD only).
- TFCI presence (TDD only).
- Timing Advance (TDD only).

10.3.5.18 DwPCH (1.28 Mcps TDD only)

- Tx diversity mode.
- SYNC_DL code ID.

10.3.5.19 UpPCH (1.28 Mcps TDD only)

- SYNC_UL code ID.

10.3.5.20 FPACH (1.28 Mcps TDD only)

- Scrambling code
- Channelisation code
- Timeslot
- Midamble shift
- Tx diversity mode.

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

6.7.3 Random access transmission sequence(TDD)

6.7.3.1 Random access transmission sequence (3.84Mcps TDD)

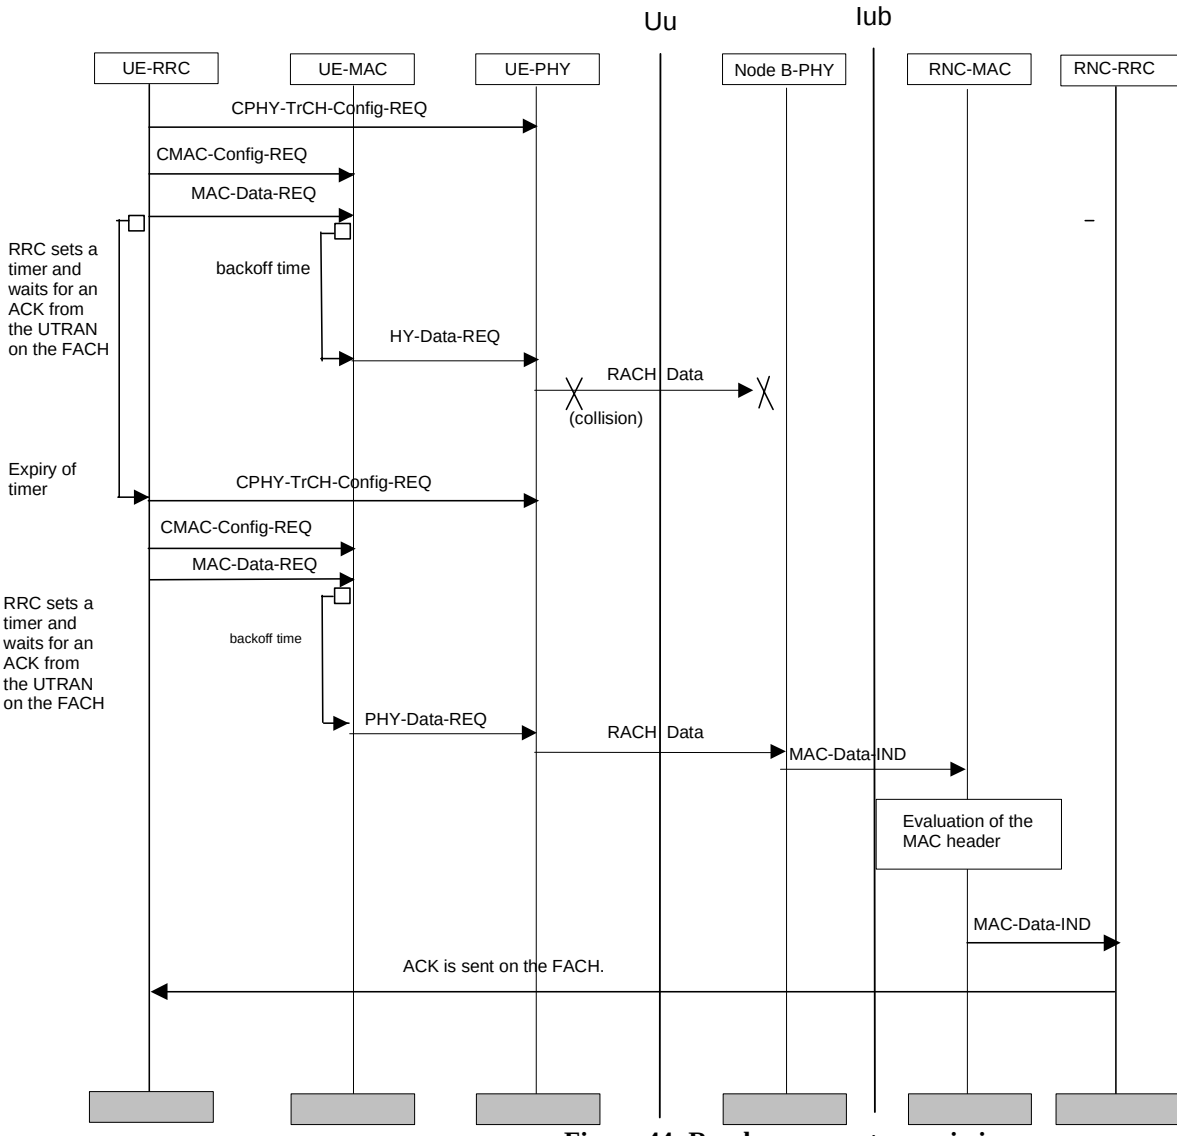

Figure 44: Random access transmission sequence (3.84Mcps TDD)

The RACH is configured once via a CPHY-TrCH-Config-REQ primitive. This primitive needs to be used only for initial configuration (e.g. power parameter) or when a parameter shall be changed, not for every RACH transmission.

The CMAC-Config-REQ primitive is used to configure MAC parameters required for the random access procedure. The parameters could include random access control parameters such as, persistence value and Access Service Class (ASC) parameters.

When there is data to be transmitted on the RACH, i.e. reception of a MAC-Data-REQ primitive, the RACH transmission control procedure is started, which includes selection of an Access Service Class (ASC).

After some backoff, a primitive PHY-Data-REQ is sent to L1, which triggers the PRACH message transmission, i.e. the physical layer selects a PRACH spreading-code without further backoff delay imposed on L1, but within the constraints of the selected ASC. Note that the backoff time on MAC may in certain conditions be set to zero (e.g. when the uplink load is low).

At the UTRAN-side MAC the further processing of received RACH message depends on the MAC header. An acknowledgement that the message was received correctly is given by a RRC procedure. In case of transparent

RLC, message retransmission shall be handled entirely on RRC employing retransmission timers. In case of non-transparent RLC, the timers are controlled by the RLC. The parameters of PRACH transmission are chosen such that the number of retransmissions for the messages are kept low. Message loss on the PRACH should be due to a collision on the same spreading code.

6.7.3.2 Random access transmission sequence (1.28Mcps TDD)

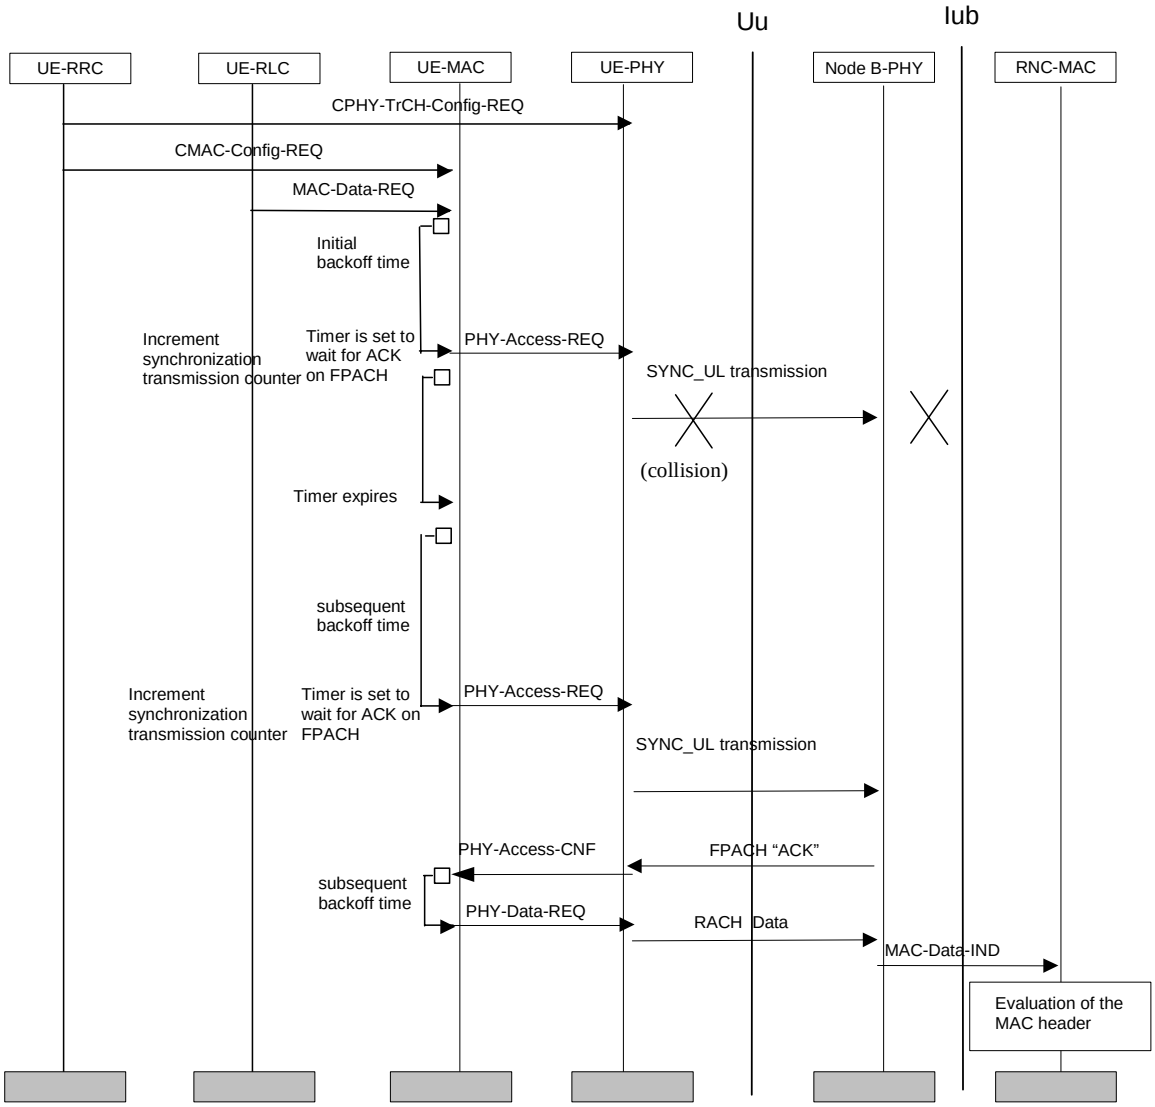

Figure x: Random access transmission sequence(1.28Mcps TDD)

The RACH is configured once via a CPHY-TrCH-Config-REQ primitive. This primitive needs to be used only for initial configuration or when a parameter shall be changed, not for every RACH transmission.

The CMAC-Config-REQ primitive is used to configure MAC parameters required for the random access procedure. The parameters could include random access control parameters such as persistence value, Access Service Class (ASC) parameters and maximum number of synchronisation attempts.

When there is data to be transmitted on the RACH, i.e. reception of a MAC-Data-REQ primitive, the RACH transmission control procedure is started, which includes selection of an Access Service Class (ASC).

After some backoff, a primitive PHY-Access-REQ is sent to L1, which triggers the PRACH message transmission, i.e. the physical layer selects a SYNC_UL code without further backoff delay imposed on L1, but within the constraints of the selected ASC.

If PHY received no acknowledgement on the FPACH and the maximum number of synchronisation attempts permitted has not been exceeded, the PHY-Access-REQ procedure is repeated.

If the SYNC_UL burst has been acknowledged on the FPACH, MAC receives an acknowledgement via PHY-Access-CNF primitive. Then data transmission is requested with a PHY-DATA-REQ primitive, and the PRACH transmission procedure shall be completed with transmission of the PRACH message on the PRACH resources associated with FPACH.

8.3 Discontinuous Reception

The UE may use Discontinuous Reception (DRX) in idle mode in order to reduce power consumption. When DRX is used the UE needs only to monitor one Page Indicator, PI, (see definition in [7] and [8]) in one Paging Occasion per DRX cycle.

The DRX cycle length shall be 2^k *PBP frames, where k is an integer and PBP is the Paging Block Periodicity. PBP is only applicable for TDD and is equal to the PICH repetition period that is broadcast in system information. For FDD, PBP=1.

The UE may be attached to different CN domains with different CN domain specific DRX cycle lengths. The UE shall store each CN domain specific DRX cycle length for each CN domain the UE is attached to and use the shortest of those DRX cycle lengths. The CS CN specific DRX cycle length coefficient shall be updated locally in the UE using information given in system information. On the other hand, the PS CN specific DRX cycle length coefficient shall be updated after the negotiation between the UE and PS CN by NAS procedure. If no specific value "k" is negotiated in NAS procedure, the UE and PS CN shall use the DRX cycle length given for PS CN domain in system information.

The DRX cycle lengths to use for UTRAN connected mode is the shortest of the following:

- UTRAN DRX cycle length;
- any of the stored CN domain specific DRX cycle length for the CN domains the UE is only attached to with no signalling connection established.

The UE shall use the IMSI, the number of available SCCPCH which carry a PCH (K) as derived according to subclause 8.1,the Cell System Frame Number (SFN), Np (for FDD, Np is the number of page indicators within a frame; for TDD, Np is the number of page indicators within a paging block), Frame offset (For FDD, Frame offset = 0; for TDD, PICH frame offset values are given in system information), PBP and the DRX cycle length to determine the Paging Occasions.

The value of the Paging Occasion (i.e. the SFN of the first frame of the Paging Block) is determined as follows:

Paging Occasion= {(IMSI div K) mod (DRX cycle length div PBP)} * PBP + n * DRX cycle length + Frame Offset

Where n = 0,1,2… as long as SFN is below its maximum value.

The actual Page Indicator within a Paging Occasion that the UE shall read is similarly determined based on IMSI.

The Page Indicator to use is calculated by using the following formula:

PI = DRX Index mod Np

where DRX Index = {(IMSI div K) div (DRX cycle length div PBP)}

In FDD mode, Np = (18,36,72,144) is the number of Page Indicators per frame, and is given in IE "Number of PI per frame", part of system information in FDD mode. In TDD mode, Np is the number of Page Indicators per paging block and is calculated by the Paging Indicator Length $L_{PI,}$ the Burst Type (long or short midamble for 3.84 Mpcs TDD) and the PICH repetition length, which are given in system information..

If the UE has no IMSI, for instance when making an emergency call without USIM, the UE shall use a default number, IMSI = 0, in the formulas above.

For FDD, see [7] for details about the timing between a PICH frame and when the paging message is transmitted on the PCH in the associated S-CCPCH frame. In TDD mode, the Paging Message Receiving Occasion is calculated using the following formula:

Paging Message Receiving Occasion =Paging Occasion + N_{PICH} + N_{GAP} + {(DRX Index div Np) mod N_{PCH} } *2

The value N_{PICH} is the number of frames for PICH transmission and is equal to the PICH repetition length given in system information. The value N_{GAP} is the number of frames between the last frame carrying PICH for this Paging Occasion and the first frame carrying paging messages for this Paging Occasion. The value N_{PCH} is the number of Paging Groups. N_{PCH} and N_{GAP} are given in system information.

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.3.2 Parameters

See TS 25.331 for a detailed description of the UE, RB and TrCH information elements.

a) UE information elements
S-RNTI
SRNC identity
C-RNTI
Activation time

b) RB information elements
RB multiplexing info (Transport channel identity, Logical channel identity, MAC logical channel priority)

c) TrCH information elements
Transport Format Combination Set

d) Measurement information elements
Mode (periodic, event-triggered or both)
TH_U
TH_L
Measurement quantity identifiers
Report Interval

e) Measurement result
Mode
Reporting Quantities
Event ID (4a or 4b)

f) Status info
when set to value ""transmission unsuccessful"" this parameter indicates to RRC that transmission of a TM RLC PDU failed (due to e.g. Maximum number of preamble ramping cycles reached for RACH in FDD), when set to value "transmission successful" this parameter indicates to RRC that the requested TM RLC PDU(s) has been submitted for transmission by the physical layer..

g) RACH transmission control elements
Set of ASC parameters (identifier for PRACH partitions, persistence values)
Maximum number of preamble ramping cycles (FDD) or synchronisation attemps (1.28Mcps TDD) M_{max}
Minimum and maximum number of time units between two preamble ramping cycles, N_{BO1min} and N_{BO1max} (FDD only)

h) Ciphering elements
Ciphering mode
Ciphering key
Ciphering sequence number

i) CPCH transmission control elements
CPCH persistency value, P for each Transport Format
Maximum number of preamble ramping cycles $N_{\_access\_fails}$
NF_max (Maximum number of frames for CPCH transmission for each Transport Format)
N_EOT (Number of EOT for release of CPCH transmission)
Backoff control timer parameters
Transport Format Set
Initial Priority Delays
Channel Assignment Active indication

11.2 Control of RACH transmissions

The MAC sublayer is in charge of controlling the timing of RACH transmissions on transmission time interval level (i.e. on 10 ms-radio frame level; the timing on access slot level is controlled by L1). Note that retransmissions in case of erroneously received RACH message part are under control of higher layers, i.e. RLC, or RRC for CCCH (and SHCCH for TDD).

11.2.1 Access Service Class selection

The physical RACH resources (i.e. access slots and preamble signatures for FDD, timeslot and channelisation code for 3.84 Mcps TDD, SYNC1 code for 1.28 Mcps TDD) may be divided between different Access Service Classes in order to provide different priorities of RACH usage. It is possible for more than one ASC or for all ASCs to be assigned to the same access slot/signature space or SYNC1 code.

Access Service Classes are numbered in the range $0 \le i \le \text{NumASC} \le 7$ (i.e. the maximum number of ASCs is NumASC+1 = 8). An ASC is defined by an identifier *i* that defines a certain partition of the PRACH resources and an associated persistence value P_i. A set of ASC parameters consists of NumASC+1 such parameters (i, P_i), i = 0, …, NumASC. The PRACH partitions and the persistence values P_i are derived by the RRC protocol from system information (see TS 25.331 [7]). The set of ASC parameters is provided to MAC with the CMAC-Config-REQ primitive. The ASC enumeration is such that it corresponds to the order of priority (ASC 0 = highest priority, ASC 7 = lowest priority). ASC 0 shall be used in case of Emergency Call or for reasons with equivalent priority.

At radio bearer setup/reconfiguration each involved logical channel is assigned a MAC Logical channel Priority (MLP) in the range 1,…,8. When the MAC sublayer is configured for RACH transmission in the UE, these MLP levels shall be employed for ASC selection on MAC.

The following ASC selection scheme shall be applied, where NumASC is the highest available ASC number and MinMLP the highest logical channel priority assigned to one logical channel:

- in case all TBs in the TB set have the same MLP, select ASC = min(NumASC, MLP);
- in case TBs in a TB set have different priority, determine the highest priority level MinMLP and select ASC = min(NumASC, MinMLP).

11.2.3 Control of RACH transmissions for TDD

11.2.3.1 Control of RACH transmissions for 3.84 Mcps TDD

The RACH transmissions are performed by the UE as shown in figure 11.2.3.1.

NOTE: The figure shall illustrate the operation of the transmission control procedure as specified below. It shall not impose restrictions on implementation.

MAC receives the following RACH transmission control parameters from RRC with the CMAC-Config-REQ primitive:

- a set of Access Service Class (ASC) parameters, which includes for each ASC, i=0,…,NumASC an identification of a PRACH partition and a persistence value P_i (transmission probability).

When there is data to be transmitted, MAC selects the ASC from the available set of ASCs, which consists of an identifier *i* of a certain PRACH partition and an associated persistence value P_i. The procedure to be applied for ASC selection is described in subclause 11.2.1.

Based on the persistence value P, the UE decides whether to send the message on the RACH. If transmission is allowed, the PRACH transmission procedure is initiated by sending of a PHY-Data-REQ primitive. If transmission is not allowed, a new persistency check is performed in the next transmission time interval. The persistency check is repeated until transmission is permitted.

Successful completion (TX status) of the MAC transmission control procedure shall be indicated to higher layer individually for each logical channel of which data was included in the transport block set of that access attempt. When

transparent mode RLC is employed (i.e. for CCCH), transmission status is reported to RRC with CMAC-STATUS-Ind primitive. For logical channels employing acknowledged or unacknowledged mode RLC, transmission status is reported to RLC with MAC-STATUS-Ind primitive.

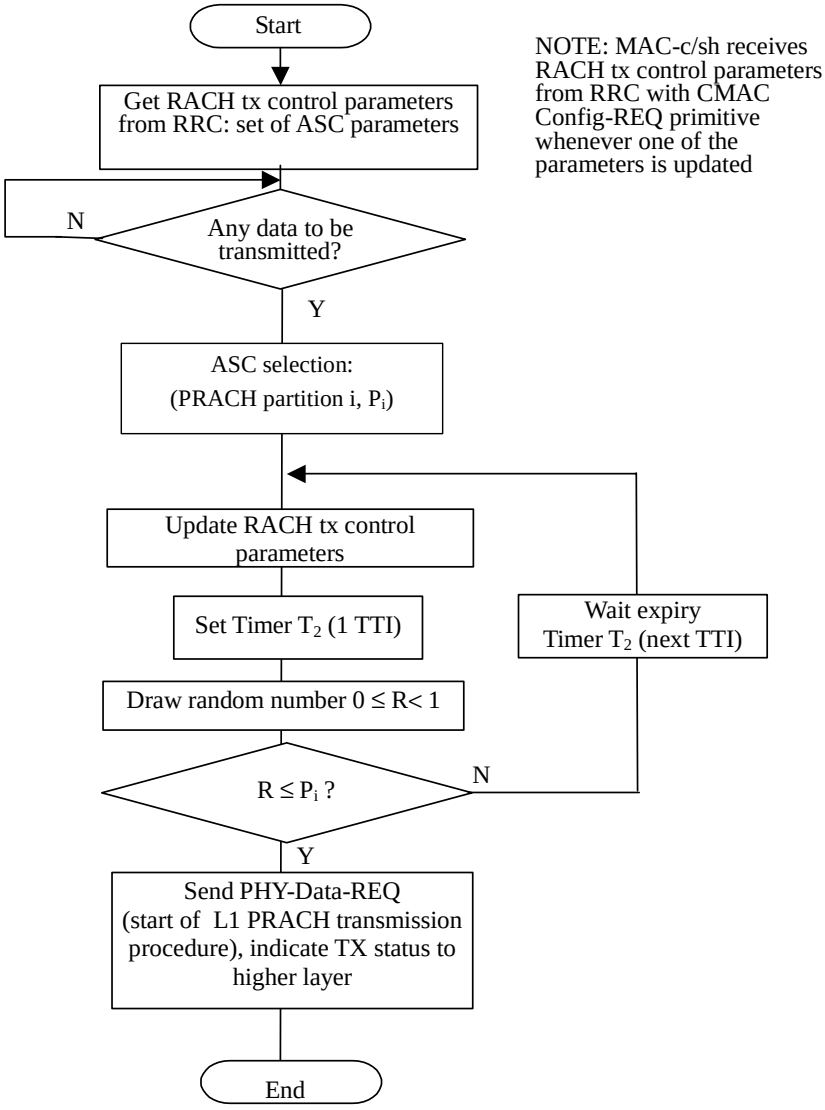

Figure 11.2.3.1: RACH transmission control procedure for TDD (UE side, informative)

11.2.3.2 Control of RACH Transmissions for 1.28 Mcps TDD

The RACH transmissions are performed by the UE as shown in figure x.

NOTE: The figure shall illustrate the operation of the transmission control procedure as specified below. It shall not impose restrictions on implementation.

UE MAC receives the following RACH transmission control parameters from RRC with the CMAC-Config-REQ primitive:

- a set of Access Service Class (ASC) parameters, which includes for each ASC, i=0,…,NumASC an identification of a PRACH partition and a persistence value P_i (transmission probability),
- maximum number of synchronisation attempts Mmax.

When there is data to be transmitted, MAC selects the ASC from the available set of ASCs, which consists of an identifier *i* of a certain PRACH partition and an associated persistence value P_i.

Based on the persistence value P_i, the UE MAC decides whether to start the L1 PRACH procedure in the present transmission time interval or not. If transmission is allowed, the PRACH transmission procedure (starting with the selection and transmission of a SYNC1 burst) is initiated by the sending of a PHY-ACCESS-REQ primitive. MAC then waits for access information from L1 via the PHY-ACCESS-CNF primitive. If transmission is not allowed, a new persistency check is performed in the next transmission time interval. The persistency check is repeated until transmission is permitted.

If the synchronisation burst has been acknowledged on the FPACH, L1 access information with parameter "ready for RACH data transmission" is indicated to MAC with a PHY-ACCESS-CNF primitive. Then data transmission is requested with a PHY-DATA-REQ primitive, and the PRACH transmission procedure shall be completed with transmission of the PRACH message on the P-RACH resources associated with the FPACH.

If PHY received no acknowledgement on the FPACH and the maximum number of synchronisation attempts permitted has not been exceeded, then a new persistency test is performed in the next transmission time interval and the PHY-ACCESS-REQ procedure is repeated. The timer T_2 ensures that two successive persistency tests are separated by at least one transmission time interval. If the maximum number of synchronisation attempts is exceeded then MAC abandons the RACH procedure and the message is discarded.

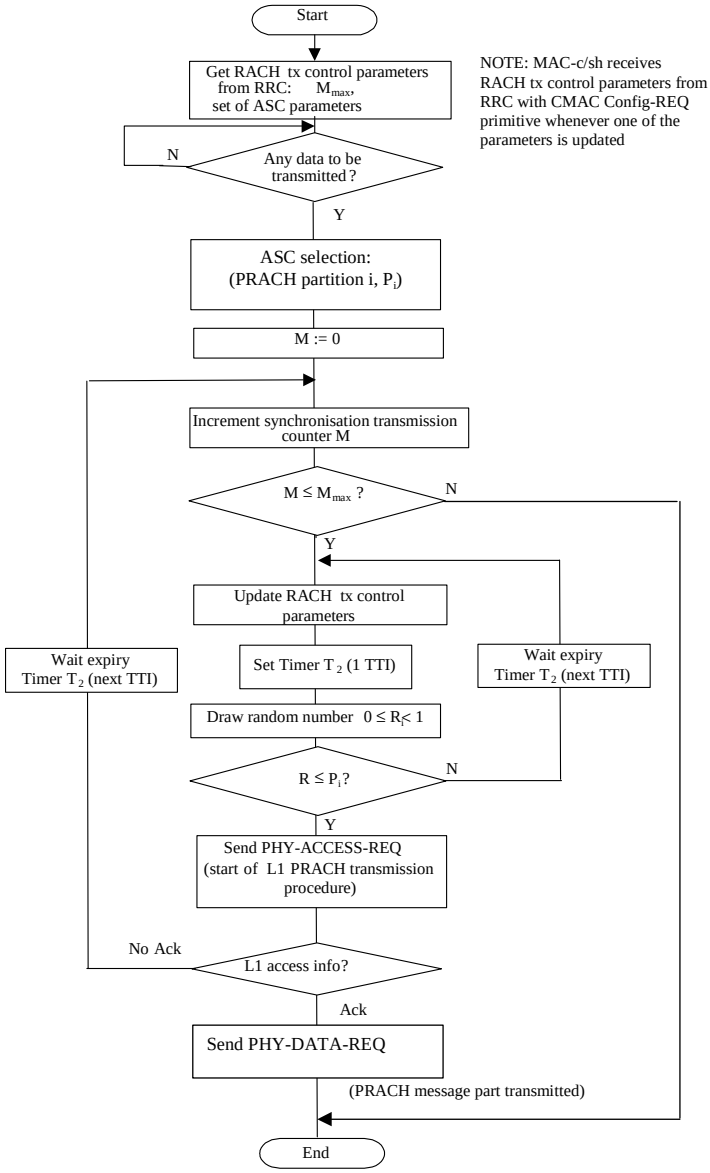

Figure x: RACH transmission control procedure for 1.28 Mcps TDD (UE side, informative)

3GPP TSG-RAN WG2 Meeting #19 ***R2-010701***

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at:
http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

4 General

If not specified else descriptions are relevant for both FDD and TDD. Descriptions for TDD only are relevant for both 1.28 Mcps TDD and 3.84 Mcps TDD if not specified else.

8.1.1.6.5 System Information Block type 5

The UE should store all relevant IEs included in this system information block. The UE shall:

- if in connected mode, and System Information Block type 6 is indicated as used in the cell:
  - read and act on information sent in System Information Block type 6.
- replace the TFS of the transport channel with the identical transport channel identity with the one stored in the UE if any;
- let the physical channel(s) of type PRACH given by the IE(s) "PRACH info" be the default in uplink for the PRACH if UE is in CELL_FACH state;
- start to receive the physical channel of type AICH using the parameters given by the IE "AICH info" (FDD only) when given allocated PRACH is used;
- select a Secondary CCPCH as specified in subclause 8.6, and start to receive the physical channel of type PICH associated with the PCH carried by the selected Secondary CCPCH using the parameters given by the IE "PICH info" if UE is in Idle mode or in CELL_PCH or URA_PCH state;
- start to monitor its paging occasions on the selected PICH if UE is in Idle mode or in CELL_PCH or URA_PCH state;
- start to receive the selected physical channel of type Secondary CCPCH using the parameters given by the IE(s) "Secondary CCPCH info" if UE is in CELL_FACH state;
- in TDD: use the IE "Midamble configuration" for receiver configuration;
- in 3.84 Mcps TDD: use the IE "TDD open loop power control" as defined in subclause 8.5.7;
- in TDD: if the IE "PDSCH system information" and/or the IE "PUSCH system information" is included, store each of the configurations given there with the associated identity given in the IE "PDSCH Identity" and/or "PUSCH Identity" respectively. For every configuration, for which the IE "SFN Time info" is included, the information shall be stored for the duration given there.

If in idle mode and System Information Block type 5 is not scheduled on BCH or System Information Block type 5 is scheduled but AICH info or PICH info is not present, the UE shall:

- consider the cell to be barred according to [4]; and
- consider the barred cell as using the value "allowed" in the IE "Intra-frequency cell re-selection indicator", and the maximum value in the IE "T_{barred}".

If in connected mode and System Information Block type 5 is not scheduled on BCH, and System Information Block type 6 is not scheduled on BCH, or any of System Information Block type 5 or type 6 is scheduled but IE "AICH info" or IE "PICH info" is not present, the UE shall:

- consider the cell to be barred according to [4]; and
- consider the barred cell as using the value "allowed" in the IE "Intra-frequency cell re-selection indicator", and the maximum value in the IE "T_{barred}".

8.1.1.6.6 System Information Block type 6

If in connected mode, the UE should store all relevant IEs included in this system information block. The UE shall:

- replace the TFS of the transport channel with the identical transport channel identity with the one stored in the UE if any;
- let the physical channel(s) of type PRACH given by the IE(s) "PRACH info" be the default in uplink if UE is in CELL_FACH state. If the IE "PRACH info" is not included, the UE shall read the corresponding IE(s) in System Information Block type 5 and use that information to configure the PRACH;

- start to receive the physical channel of type AICH using the parameters given by the IE "AICH info" when associated PRACH is used. If the IE "AICH info" is not included, the UE shall read the corresponding IE in System Information Block type 5 and use that information (FDD only);

- select a Secondary CCPCH as specified in subclause 8.6, and start to receive the physical channel of type PICH associated with the PCH carried by the selected Secondary CCPCH using the parameters given by the IE "PICH info" if the UE is in CELL_PCH or URA_PCH state. If the IE "PICH info" is not included, the UE shall read the corresponding IE in System Information Block type 5 and use that information;

- start to monitor its paging occasions on the selected PICH if the UE is in CELL_PCH or URA_PCH state;

- start to receive the selected physical channel of type Secondary CCPCH using the parameters given by the IE(s) "Secondary CCPCH info" if the UE is in CELL_FACH state. If the IE "Secondary CCPCH info" is not included, the UE shall read the corresponding IE(s) in System Information Block type 5 and use that information;

- in 3.84 Mcps TDD: use the IE "TDD open loop power control" as defined in subclause 8.5.7;

- in TDD: if the IE "PDSCH system information" and/or the IE "PUSCH system information" is included, store each of the configurations given there with the associated identity given in the IE "PDSCH Identity" and/or "PUSCH Identity" respectively. For every configuration, for which the IE "SFN Time info" is included, the information shall be stored for the duration given there.

If in idle mode, the UE shall not use the values of the IEs in this system information block.

8.2.10 Uplink Physical Channel Control [TDD only]

Figure 36: Uplink Physical Channel Control

8.2.10.1 General

The uplink physical channel control procedure is used in TDD to control the uplink outer loop power control and timing advance running in the UE.

8.2.10.2 Initiation

The UTRAN initiates the procedure by transmitting the UPLINK PHYSICAL CHANNEL CONTROL message on the downlink DCCH using AM or UM RLC in order to update parameters for uplink open loop power control in the UE for one CCTrCH or to inform the UE about a new timing advance value to be applied. Especially, uplink interference information measured by the UTRAN can be included for the uplink timeslots used for the CCTrCH.

8.2.10.3 Reception of UPLINK PHYSICAL CHANNEL CONTROL message by the UE

Upon reception of the UPLINK PHYSICAL CHANNEL CONTROL message, the UE shall act upon all received information elements as specified in subclause 8.6.

In 3.84 Mcps TDD ~~I~~ if the IEs "Uplink DPCH Power Control Info", "Constant Value", "Alpha" or IE group "list of UL Timeslot Interference" are transmitted, this information shall be taken into account by the UE for uplink open loop power control as specified in subclause 8.5.7.

The UE shall clear the entry for the UPLINK PHYSICAL CHANNEL CONTROL message in the table "Accepted transactions" in the variable TRANSACTIONS and the procedure ends.

8.2.10.4 Invalid UPLINK PHYSICAL CHANNEL CONTROL message

If the UE receives a UPLINK PHYSICAL CHANNEL CONTROL message, which contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

- transmit an RRC STATUS message on the uplink DCCH using AM RLC, setting the information elements as specified below:
  - include the IE "Identification of received message"; and
  - set the IE "Received message type" to UPLINK PHYSICAL CHANNEL CONTROL; and
  - set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the UPLINK PHYSICAL CHANNEL CONTROL message in the table "Rejected transactions" in the variable TRANSACTIONS; and
  - clear that entry;
  - include the IE "Protocol error information" with contents set to the value of the variable PROTOCOL_ERROR_INFORMATION;

- when the RRC STATUS message has been submitted to lower layers for transmission:
    - resume normal operation as if the invalid UPLINK PHYSICAL CHANNEL CONTROL message has not been received.

8.5.7 Open loop power control

For FDD and prior to PRACH or PCPCH transmission the UE shall:

- read the IEs "Primary CPICH DL TX power", "UL interference" and "Constant value" in System Information Block type 6 (or System Information Block type 5, if system information block type 6 is not being broadcast) and System Information Block type 7.
- measure the value for the CPICH_RSCP
- calculate the power for the first preamble as:

  Preamble_Initial_Power = Primary CPICH DL TX power – CPICH_RSCP + UL interference + Constant Value

  Where,

  Primary CPICH DL TX power shall have the value of IE "Primary CPICH DL TX power",

  UL interference shall have the value of IE "UL interference"; and

  Constant Value shall have the value of IE "Constant Value".

- as long as the physical layer is configured for PRACH or PCPCH transmission, continuously recalculate the Preamble_Initial_Power when any of the broadcast parameters used in the above formula changes and resubmit to the physical layer the new calculated Preamble_Initial_Power.

For 3.84Mcps TDD the UE shall:

- if in the IE "Uplink DPCH Power Control" the "CHOICE UL OL PC info" has the value "Broadcast UL OL PC info":
  - acquire Reference Power, Constant Values from System Information Block type 5 and System Information Block type 6, and I_{BTS} for all active UL timeslots from System Information Block type 14 on the BCH;
  - otherwise:
    - acquire Reference Power, Constant Values and I_{BTS} for all active UL timeslots from the IE "Uplink DPCH Power Control".
- for PUSCH and PRACH power control acquire Reference Power, Constant Values and I_{BTS} for all active UL timeslots from System Information Block type 5 , System Information Block type and System Information Block type 14 on the BCH,

  calculate the UL transmit power according to the following formula for the PRACH continuously while the physical channel is active:

  $P_{PRACH} = L_{PCCPCH} + I_{BTS}$ + RACH Constant value,

  where, 3dB shall be added to RACH Constant Value for the case where RACH Spreading Factor = 8
- calculate the UL transmit power according to the following formula for the DPCH continuously while the physical channel is active:

  $P_{DPCH} = \alpha L_{PCCPCH} + (1-\alpha)L_0 + I_{BTS} + SIR_{TARGET}$ + DPCH Constant value

- calculate the UL transmit power according to the following formula for the PUSCH continuously while the physical channel is active:

  $P_{USCH} = \alpha L_{PCCPCH} + (1-\alpha)L_0 + I_{BTS} + SIR_{TARGET}$ + USCH Constant value

Where, for all the above equations for TDD the following apply:

- P_{PRACH}, P_{DPCH}, & P_{USCH}: Transmitter power level in dBm,
- L_{PCCPCH}: Measurement representing path loss in dB (reference transmit power "Primary CCPCH Tx Power" is broadcast on BCH in System Information Block type 5 and System Information Block type 6, or individually signalled to each UE in the IE" Uplink DPCH Power Control").
- L_0: Long term average of path loss in dB
- I_{BTS}: Interference signal power level at cell's receiver in dBm ("UL Interference" is broadcast on BCH in System Information Block type 14 or individually signalled to each UE in the IE "Uplink DPCH Power Control" for each active uplink timeslot).
- α: α is a weighting parameter, which represents the quality of path loss measurements. α may be a function of the time delay between the uplink time slot and the most recent down link PCCPCH time slot. α is calculated at the UE.
- SIR_{TARGET}: Target SNR in dB. This value is individually signalled to UEs in IEs "UL DPCH Power Control Info" and "PUSCH Power Control Info".
- RACH Constant value: This value is broadcast on BCH and shall be read on System Information Block type 5 and System Information Block type 6.
- DPCH Constant value: This value is broadcast on BCH and shall be read on System Information Block type 5 and System Information Block type 6, or individually signalled to each UE in the IE "Uplink DPCH Power Control".

- USCH Constant Value: This value is broadcast on BCH and shall be read on System Information Block type 5 and System Information Block type 6.

For 1.28 Mcps TDD the UE shall:

- calculate the UL transmit power according to the following formula for each UpPCH code transmission:

$$P_{UpPCH} = L_{PCCPCH} + PRX_{UpPCHdes} + i* Pwr_{ramp}$$

- calculate the UL transmit power according to the following formula for each PRACH transmission:

$$P_{PRACH} = L_{PCCPCH} + PRX_{PRACHdes} + i * Pwr_{ramp}$$

- calculate the initial UL transmit power according to the following formula for the PUSCH. Once the UE receives TPC bits relating to the PUSCH then it transitions to closed loop power control. If successive PUSCH resource allocations are contiguous then no return is made to open loop power control at the beginning of the succeeding resource allocation.

$$P_{USCH} = SIR_{TARGET} + L_{PCCPCH}$$

- calculate the initial UL transmit power according to the following formula for the DPCH. Once the UE receives TPC bits relating to the uplink DPCH then it transitions to closed loop power control.

$$P_{DPCH} = SIR_{TARGET} + L_{PCCPCH}$$

Where,

- P_{UpPCH}, P_{PRACH}, P_{DPCH}, & P_{USCH}: Transmitter power level in dBm,
- L_{PCCPCH}: Measurement representing path loss in dB (reference transmit power "Primary CCPCH Tx Power" is broadcast on BCH in System Information Block type 5 and System Information Block type 6, or individually signalled to each UE in the IE" Uplink DPCH Power Control").
- SIR_{TARGET}: Target SIR in dB. This value is individually signalled to UEs in IEs "UL DPCH Power Control Info" and "PUSCH Power Control Info".
- i is the number of transmission attempts on UpPCH

- $PRX_{PRACHdes}$: Desired PRACH RX power at the cell's receiver in dBm signalled to the UE by the network in the FPACH response to the UE's successful SYNC_UL transmission.

- $PRX_{UpPCHdes}$: Desired UpPCH RX power at the cell's receiver in dBm. The value is broadcast on BCH and shall be read on System Information Block type 5 and System Information Block type 6. It can also be signalled directly to the UE in a protocol message triggering a hard handover.

- Pwr_{ramp}: The UE shall increase its transmission power by the value of the IE "Power Ramp step" by every UpPCH transmission

8.6.3.7 UL Timing Advance

If the IE "UL Timing Advance Control" is present, the UE shall:

- For the TDD 3.84 Mcps option:
  - if IE "Uplink Timing Advance Control" has the value "disabled":
    - reset timing advance to 0;
      - disable calculated timing advance following handover;
      - in case of handover start uplink transmissions in the target cell without applying timing advance;
  - if IE "Uplink Timing Advance Control" has the value "enabled":
    - evaluate and apply the timing advance value for uplink transmission as indicated in IE "Uplink Timing Advance" at the CFN indicated in the IE "Activation Time";
  - enable UE autonomous timing advance calculation for handover;
    - update uplink timing advance as indicated in IE "Uplink Timing Advance" in advance of the UE autonomous timing advance calculation
- For the TDD 1.28 Mcps option:
  - if IE “Uplink Timing Advance Control” has the value “disabled”:
    - transmit on newly assigned physical resources by applying autonmous timing advance calculation procedure as defined in 25.224.
  - if IE “Uplink Timing Advance Control” has the value “enabled”
    - if the IE “ Synchronization parameters ” is not present the UE shall:
      - start uplink transmissions on resources allocated in the target cell using the autonomously calculated timing correction.
    - if the IE “ Synchronization parameters ” is present the UE shall:
      - complete a SYNC_UL/FPACH exchange to obtain a timing correction from FPACH before transmitting on newly assigned resources as specified in 25.224 and apply power settings as specified in 8.5.7.

8.6.3.7a Uplink synchronisation parameters

The UE shall apply uplink synchronisation using the values of the IEs "Uplink synchronisation step size" and " Uplink synchronisation frequency"as specified in 25.224.

8.6.6.11 Uplink DPCH power control info

The UE shall:

- in FDD:
  - if the IE "Uplink DPCH power control info" is included:
    - calculate and set an initial uplink transmission power;
    - start inner loop power control as specified in subclause 8.5.3;
    - for the UL inner loop power control:
      - use the parameters specified in the IE.
- in 3.84 Mcps TDD:
  - if the IE "Uplink DPCH power control info" is included:
    - use the parameters specified in the IE for open loop power control as defined in subclause 8.5.7.
- in 1.28 Mcps TDD:
  - if the IE "Uplink DPCH power control info" is included:
    - calculate and set an initial uplink transmission power;
    - start inner loop power control ;
    - for the UL inner loop power control:
      - use the parameter specified in the IE
- both in FDD and TDD;
  - if the IE "Uplink DPCH power control info" is not included:
    - use the current uplink transmission power.

10.2.23 PHYSICAL CHANNEL RECONFIGURATION COMPLETE

10.2.59 UPLINK PHYSICAL CHANNEL CONTROL

NOTE: Only for TDD.

This message is used to transfer uplink physical channel parameters to the UE.

RLC-SAP: AM or UM

Logical channel: DCCH

Direction: UTRAN→UE

>>SS-TPC Symbols	MP		Enumerated(0, 1, 16/SF)	Denotes amount of SS and TPC bits send in this timeslot	REL-4

10.3.6.41 Midamble shift and burst type

NOTE: Only for TDD.

This information element indicates burst type and midamble allocation. Three different midamble allocation schemes exist:

- Default midamble: the midamble shift is selected by layer 1 depending on the associated channelisation code (DL and UL)
- Common midamble: the midamble shift is chosen by layer 1 depending on the number of channelisation codes (possible in DL only)
- UE specific midamble: a UE specific midamble is explicitly assigned (DL and UL).

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version

10.3.10 Multiplicity values and type constraint values

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

Constant	Explanation	Value
CN information		
MaxCNdomains	Maximum number of CN domains	4
UTRAN mobility information		
MaxRAT	Maximum number or Radio Access Technologies	maxOtherRAT + 1
MaxOtherRAT	Maximum number or other Radio Access Technologies	15
MaxURA	Maximum number of URAs in a cell	8
MaxInterSysMessages	Maximum number of Inter System Messages	4
MaxRABsetup	Maximum number of RABs to be established	16
UE information		
Maxtransactions	Maximum number of parallel RRC transactions in downlink	25
MaxPDCPalgoType	Maximum number of PDCP algorithm types	8
MaxDRACclasses	Maximum number of UE classes which would require different DRAC parameters	8
MaxFrequencybands	Maximum number of frequency bands supported by the UE as defined in 25.102	4
MaxPage1	Number of UEs paged in the Paging Type 1 message	8
MaxSystemCapability	Maximum number of system specific capabilities that can be requested in one message.	16
RB information		
MaxPredefConfig	Maximum number of predefined configurations	16
MaxRB	Maximum number of RBs	32
MaxSRBsetup	Maximum number of signalling RBs to be established	8
MaxRBperRAB	Maximum number of RBs per RAB	8
MaxRBallRABs	Maximum number of non signalling RBs	27
MaxRBMuxOptions	Maximum number of RB multiplexing options	8
MaxLoCHperRLC	Maximum number of logical channels per RLC entity	2
TrCH information		
MaxTrCH	Maximum number of transport channels used in one direction (UL or DL)	32
MaxTrCHpreconf	Maximum number of preconfigured Transport channels, per direction	16
MaxCCTrCH	Maximum number of CCTrCHs	8
MaxTF	Maximum number of different transport formats that can be included in the Transport format set for one transport channel	32
MaxTF-CPCH	Maximum number of TFs in a CPCH set	16
MaxTFC	Maximum number of Transport Format Combinations	1024
MaxTFCI-1-Combs	Maximum number of TFCI (field 1) combinations	512
MaxTFCI-2-Combs	Maximum number of TFCI (field 2) combinations	512
MaxCPCHsets	Maximum number of CPCH sets per cell	16
MaxSIBperMsg	Maximum number of complete system information blocks per SYSTEM INFORMATION message	16
MaxSIB	Maximum number of references to other system information blocks.	32
MaxSIB-FACH	Maximum number of references to system information blocks on the FACH	8
PhyCH information		
MaxSubCh	Maximum number of sub-channels on PRACH	12
MaxPCPCH-APsubCH	Maximum number of available sub-channels for AP signature on PCPCH	12
MaxPCPCH-CDsubCH	Maximum number of available sub-channels for CD signature on PCPCH	12
MaxSig	Maximum number of signatures on PRACH	16
MaxPCPCH-APsig	Maximum number of available signatures for AP on PCPCH	16
MaxPCPCH-CDsig	Maximum number of available signatures for CD on PCPCH	16
MaxAC	Maximum number of access classes	16
MaxASC	Maximum number of access service classes	8
MaxASCmap	Maximum number of access class to access service classes mappings	7
MaxASCpersist	Maximum number of access service classes for which persistence scaling factors are specified	6
MaxPRACH	Maximum number of PRACHs in a cell	16

MaxFACHPCH	Maximum number of FACHs and PCHs mapped onto one secondary CCPCHs	8
MaxRL	Maximum number of radio links	8
MaxSCCPCH	Maximum number of secondary CCPCHs per cell	16
MaxDPDCH-UL	Maximum number of DPDCHs per cell	6
MaxDPCH-DLchan	Maximum number of channelisation codes used for DL DPCH	8
MaxDPCHcodesPerTS	Maximum number of codes for one timeslots (TDD)	16
MaxPUSCH	Maximum number of PUSCHs	(8)
MaxPDSCH	Maximum number of PDSCHs	8
MaxPDSCHcodes	Maximum number of codes for PDSCH	16
MaxPDSCH-TFCIgroups	Maximum number of TFCI groups for PDSCH	256
MaxPDSCHcodeGroups	Maximum number of code groups for PDSCH	256
MaxPCPCHs	Maximum number of PCPCH channels in a CPCH Set	64
MaxPCPCH-SF	Maximum number of available SFs on PCPCH	7
MaxTS	Maximum number of timeslots used in one direction (UL or DL)	~~14~~6 (1.28 Mcps TDD) 14 (3.84 Mcps TDD)
HiPUSCHIdentities	Maximum number of PDSCH Identities	64
HiPDSCHIdentities	Maximum number of PDSCH Identities	64
Measurement information		
MaxTGPS	Maximum number of transmission gap pattern sequences	6
MaxAdditionalMeas	Maximum number of additional measurements for a given measurement identity	4
MaxMeasEvent	Maximum number of events that can be listed in measurement reporting criteria	8
MaxMeasParEvent	Maximum number of measurement parameters (e.g. thresholds) per event	2
MaxMeasIntervals	Maximum number of intervals that define the mapping function between the measurements for the cell quality Q of a cell and the representing quality value	1
MaxCellMeas	Maximum number of cells to measure	32
MaxReportedGSMCells	Maximum number of GSM cells to be reported	6
MaxFreq	Maximum number of frequencies to measure	8
MaxSat	Maximum number of satellites to measure	16
HiRM	Maximum number that could be set as rate matching attribute for a transport channel	256
Frequency information		
MaxFDDFreqList	Maximum number of FDD carrier frequencies to be stored in USIM	4
MaxTDDFreqList	Maximum number of TDD carrier frequencies to be stored in USIM	4
MaxFDDFreqCellList	Maximum number of neighbouring FDD cells to be stored in USIM	32
MaxTDDFreqCellList	Maximum number of neighbouring TDD cells to be stored in USIM	32
MaxGSMCellList	Maximum number of GSM cells to be stored in USIM	32
Other information		
MaxNumGSMFreqRanges	Maximum number of GSM Frequency Ranges to store	32
MaxNumFDDFreqs	Maximum number of FDD centre frequencies to store	8
MaxNumTDDFreqs	Maximum number of TDD centre frequencies to store	8
MaxNumCDMA200Freqs	Maximum number of CDMA2000 centre frequencies to store	8

MaxGSMCellList	Maximum number of GSM cells to be stored in USIM	32

11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in TR 25.921. PDU and IE definitions are grouped into separate ASN.1 modules.

11.1 General message structure

3GPP TSG- RAN WG2 Meeting #19 ***R2-010702***
Sophia Antipolis, France, 19 – 23 February 2001

CR-Form-v3

CHANGE REQUEST

⌘ **25.331** **CR** **707** ⌘ rev **r2** ⌘ Current version: **3.5.0** ⌘

*For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.*

Proposed change affects: ⌘ (U)SIM ☐ ME/UE **X** Radio Access Network **X** Core Network ☐

Title:	⌘	Changes to Measurement Related Signalling and Introduction of Cell (Re)selection Parameters for 1.28Mcps TDD
Source:	⌘	TSG-RAN WG2
Work item code:	⌘	LCRTDD-L23 — ***Date:*** ⌘ 12 February, 2001
Category:	⌘	**B** — ***Release:*** ⌘ REL-4

Use one of the following categories:
F *(essential correction)*
A *(corresponds to a correction in an earlier release)*
B *(Addition of feature),*
C *(Functional modification of feature)*
D *(Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:

2	*(GSM Phase 2)*
R96	*(Release 1996)*
R97	*(Release 1997)*
R98	*(Release 1998)*
R99	*(Release 1999)*
REL-4	*(Release 4)*
REL-5	*(Release 5)*

Reason for change:	⌘	Addition of 1.28Mcps TDD option requires minor changes to measurement related signalling information elements and cell reselection parameters.
Summary of change:	⌘	- Support of 1.28 Mcps TDD has been added in IEs “cell info”, “FACH measurement occasion info” , “mapping info” , “UE internal reporting quantity” , “UE internal measured results” and “Measured results on RACH”.
Consequences if not approved:	⌘	

Clauses affected:	⌘	10.3.2.5, 10.3.7.2, 10.3.7.8, 10.3.7.45, 10.3.7.76, 10.3.7.82, 10.3.7.x (new), 11
Other specs affected:	⌘	☐ Other core specifications ⌘ ☐ Test specifications ☐ O&M Specifications
Other comments:	⌘	

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at:
http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10.3.2.5 Mapping Info

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Mapping List	MP	1 to <MaxRAT>			
>RAT	MP		Enumerated (UTRA FDD, UTRA TDD 3.84 Mcps, UTRA TDD 1.28 Mcps, GSM, cdma2000)		UTRA TDD 1.28 Mcps is included for REL-4.
>Mapping Function Parameter List	MP	1 to <maxMeasIntervals>			
>> Function type	MP		Enumerated (linear, function type 2, function type 3, function type 4)	Type of the function within the interval.	
>>Map_parameter_1	MD		Integer (0..99)	Parameter describing the mapping function between the quality measurement and the representing quality value, see TS 25.304. Default value is zero for the first interval or otherwise the value of Map_parameter_2 of the interval before.	
>>Map_parameter_2	MP		Integer (0..99)	Parameter describing the mapping function between the quality measurement and the representing quality value, see TS 25.304.	

>>Upper_limit	CV - MaxInt		Integer (1..MaxMeas)	Upper limit of interval for which the Map_parameter _1 and Map_parameter _2 are valid. MaxMeas = 25 if RAT = UTRA FDD / CPICH Ec/N0, MaxMeas = 91 if RAT = UTRA TDD 3.84 Mcps or if RAT = UTRA TDD 1.28 Mcps or if RAT = UTRA FDD/ CPICH RSCP, MaxMeas = 63 if RAT = GSM.	

Condition	Explanation
MaxInt	This information is only sent if Mapping Function Parameter List has not reached maxMeasIntervals.

10.3.7.2 Cell info

Includes non-frequency related cell info used in the IE "inter-frequency cell info list" and "intra frequency cell info list".

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Cell individual offset	MD		Real(-10..10 by step of 0.5)	In dB Default value is 0 dB Used to offset measured quantity value	
Reference time difference to cell	OP		Reference time difference to cell 10.3.7.60	In chips. This IE is absent for serving cell.	
CHOICE *mode*	MP				
>FDD					
>>Primary CPICH info	OP		Primary CPICH info 10.3.6.60	This IE is absent only if measuring RSSI only (broadband measurement.)	
>>Primary CPICH Tx power	OP		Primary CPICH Tx power 10.3.6.61	Required if calculating pathloss.	
>>Read SFN indicator	MP		Boolean	TRUE indicates that read of SFN is requested for the target cell	
>>TX Diversity Indicator	MP		Boolean		
>TDD					
>>Primary CCPCH info	MP		Primary CCPCH info 10.3.6.57		
>>Primary CCPCH TX power	OP		Primary CCPCH TX power 10.3.6.59		
>> Timeslot list	OP	1 to <maxTS>		The UE shall report Timeslot ISCP values according the order of the listed Timeslot numbers	
>>>CHOICE TDD option	MP				REL-4
>>>>3.84 Mcps TDD					REL-4
>>>>>Timeslot number	MP		Integer (0...14)	Timeslot numbers, for which the UE shall report Timeslot ISCP	
>>>>>Burst Type	MD		Enumerated (Type1, Type2)	Use for Timeslot ISCP measurements only. Default value is "Type1"	
>>>>1.28Mcps TDD					REL-4
>>>>>Timeslot number	MP		Integer (1...6)	Timeslot numbers, for which the UE shall report Timeslot ISCP	REL-4
Cell Selection and Re-selection Info	CV-BCHopt		Cell Selection and Re-selection for SIB11/12Info 10.3.2.4	Only when sent in system information. This IE is absent for serving cell. For neighbouring cell, if HCS is not used and all the parameters in cell selection and re-selection info are default value, this IE is absent.	

10.3.7.8 FACH measurement occasion info

This IE is for FDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
FACH Measurement occasion cycle length coefficient	OP		Integer(1..12)		
Inter-frequency FDD measurement indicator	MP		Boolean	TRUE means that measurements are required	
Inter-frequency TDD 3.84 Mcps measurement indicator	MP		Boolean	TRUE means that measurements are required	
Inter-frequency TDD 1.28 Mcps measurement indicator	MP		Boolean	TRUE means that measurements are required	REL-4
Inter-RAT measurement indicators	OP	1 to <maxOtherRAT>			
>RAT type	MP		Enumerated (GSM, IS2000)		

10.3.7.45 Measured results on RACH

Contains the measured results on RACH of the quantity indicated optionally by Reporting Quantity in the system information broadcast on BCH. The list should be in the order of the value of the measurement quality (the first cell should be the best cell). The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP".

Information Element/group name	Need	Multi	Type and reference	Semantics description	Version
Measurement result for current cell					
CHOICE *mode*	MP				
>FDD					
>>CHOICE measurement quantity	MP				
>>>CPICH Ec/N0			Integer(-20..0)	In dB	
>>>CPICH RSCP			Integer(-115..-40)	In dBm	
>>>Pathloss			Integer(46..158)	In dB	
>TDD					
>>CHOICE TDD option	MP				REL-4
>>>3.84 Mcps TDD					REL-4
>>>>Timeslot List	OP	1 to 14			
>>>>>Timeslot ISCP	MP		Timeslot ISCP info 10.3.7.65	The UE shall report the Timeslot ISCP in the same order as indicated in the cell info	
>>>1.28 Mcps TDD					REL-4
>>>>Timeslot List	OP	1 to 6			REL-4
>>>>>Timeslot ISCP	MP		Timeslot ISCP info 10.3.7.65	The UE shall report the Timeslot ISCP in the same order as indicated in the cell info	REL-4
>>Primary CCPCH RSCP	OP		Primary CCPCH RSCP info 10.3.7.54		
Measurement results for monitored cells	OP	1 to 7			
>SFN-SFN observed time difference	OP		SFN-SFN observed time difference 10.3.7.63	It is absent for current cell	
>CHOICE *mode*	MP				
>>FDD					
>>>Primary CPICH info	MP		Primary CPICH info 10.3.6.60		
>>>CHOICE measurement quantity	OP			It is absent for current cell	
>>>>CPICH Ec/N0			Integer(-20..0)	In dB	
>>>>CPICH RSCP			Integer(-115..-40)	In dBm	
>>>>Pathloss			Integer(46..158)	In dB	
>>TDD					
>>>Cell parameters Id	MP		Cell parameters Id 10.3.6.9		
>>>Primary CCPCH RSCP	MP		Primary CCPCH RSCP info 10.3.7.54		

NOTE 1: Monitored cells consist of current cell and neighbouring cells.

10.3.7.76 UE internal measured results

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE *mode*	MP				
>FDD					
>>UE Transmitted Power	OP		UE transmitted power info 10.3.7.85		
>>UE Rx-Tx report entries	OP	1 to <maxRL>			
>>>Primary CPICH info	MP		Primary CPICH info 10.3.6.60	Primary CPICH info for each cell included in the active set	
>>>UE Rx-Tx time difference type 1	MP		UE Rx-Tx time difference type 1 10.3.7.83	UE Rx-Tx time difference in chip for each RL included in the active set	
>TDD					
>>UE transmitted Power list	OP	1 to <maxTS>		UE transmitted power for each used uplink timeslot in ascending timeslot number order	
>>>UE transmitted power	MP		UE transmitted power info 10.3.7.85		
>>CHOICE TDD option	MP				REL-4
>>>3.84 Mcps TDD					REL-4
>>>>Applied TA	OP		Uplink Timing Advance 10.3.6.95		
>>>1.28 Mcps TDD					REL-4
>>>> $UpPCH_{ADV}$	OP		$UpPCH_{ADV}$ 10.3.7.x		REL-4

10.3.7.82 UE Internal reporting quantity

For all boolean types TRUE means inclusion in the report is requested.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE Transmitted Power	MP		Boolean		
CHOICE mode	MP				
>FDD					
>>UE Rx-Tx time difference	MP		Boolean		
>TDD					
>>CHOICE TDD option					REL-4
>>>3.84 Mcps TDD				(no data)	REL-4
>>>>Applied TA	MP		Boolean		
>>>1.28 Mcps TDD					REL-4
>>>> $UpPCH_{ADV}$	MP		Boolean		REL-4

10.3.7.x $UpPCH_{ADV}$

NOTE: Only for 1.28Mcps TDD.

$UpPCH_{ADV}$ indicates the difference between the Rx timing and initial Tx timing of a UE.

Information Element/group name	Need	Multi	Type and reference	Semantics description	Version
$UpPCH_{ADV}$	MP		Integer (0..352)	In chips	REL-4

11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in TR 25.921. PDU and IE definitions are grouped into separate ASN.1 modules.

Sophia Antipolis, France, 19-23 February 2001

CR-Form-v3

CHANGE REQUEST

⌘ **25.331** **CR** **708** ⌘ rev **r1** ⌘ Current version: **3.5.0** ⌘

*For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.*

Proposed change affects: ⌘ (U)SIM ☐ ME/UE **X** Radio Access Network **X** Core Network ☐

Title:	⌘	Introduction of RACH Parameters for 1.28 Mcps TDD
Source:	⌘	TSG-RAN WG2
Work item code:	⌘	LCRTDD-L23
Date:	⌘	February 12, 2001
Category:	⌘	**B**
Release:	⌘	REL-4

Use one of the following categories:
F *(essential correction)*
A *(corresponds to a correction in an earlier release)*
B *(Addition of feature),*
C *(Functional modification of feature)*
D *(Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:

2	*(GSM Phase 2)*
R96	*(Release 1996)*
R97	*(Release 1997)*
R98	*(Release 1998)*
R99	*(Release 1999)*
REL-4	*(Release 4)*
REL-5	*(Release 5)*

Reason for change:	⌘	Support of 1.28 Mpcs TDD is introduced in TS 25.331.
Summary of change:	⌘	Support of signalling for 1.28 Mcps RACH procedure.
Consequences if not approved:	⌘	

Clauses affected:	⌘	8.5.12, 8.6.6.x (new), 10.3.6.6, 10.3.6.51, 10.3.6.51a (new), 10.3.6.52, 10.3.6.53, 10.3.6.55, 10.3.6.x (new), 10.3.6.y (new), 10.3.10, 11
Other specs affected:	⌘	☐ Other core specifications ⌘ ☐ Test specifications ☐ O&M Specifications
Other comments:	⌘	

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at:
http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.5.12 Establishment of Access Service Classes

The PRACH resources (i.e. access slots and preamble signatures for FDD~~)~~, timeslot (with specific frame allocation and channelization code) for 3.84Mcps TDD and SYNC_UL codes (with specific frame allocation) for 1.28Mcps TDD) may be divided between different Access Service Classes in order to provide different priorities of RACH usage. It is possible for more than one ASC or for all ASCs to be assigned to the same access slot/signature space in FDD, ~~or~~ frame allocation/channelization codes in 3.84Mcps TDD or frame allocation/SYNC_UL codes in 1.28Mcps TDD.

Access Service Classes shall be numbered in the range $0 \le i \le \text{NumASC} \le 7$ (i.e. the maximum number of ASCs is "NumASC+1" = 8). An ASC is defined by an identifier, i, that defines a certain partition of the PRACH resources (SYNC_UL resources in 1.28Mcps TDD) and an associated persistence value P_i. A set of ASC parameters consists of "NumASC+1" such parameters (i, P_i), i = 0, …, NumASC.

PRACH partitions shall be established using the information element "PRACH partition". The persistence values P_i to be associated with each ASC shall be derived from the dynamic persistence level N = 1,…, 8 which is broadcast in SIB 7, and the persistence scaling factors s_i, broadcast in System Information Block Type 5 and possibly also in System Information Block Type 6, as follows:

$P(N) = 2^{-(N-1)}$

ASC # i	0	1	2	3	4	5	6	7
P_i	1	P(N)	s_2 P(N)	s_3 P(N)	s_4 P(N)	s_5 P(N)	s_6P(N)	s_7 P(N)

Scaling factors s_i are provided optionally for i = 2,…, NumASC, where NumASC+1 is the number of ASCs as defined by PRACH partitioning. If no scaling factors are broadcast, default value 1 shall be used if NumASC ≥ 2.

If $k \ge 1$ scaling factors are broadcast and NumASC ≥ k+2 then the last scaling factor s_{k+1} shall be used as default for the ASCs where $i > k+1$.

The set of ASC parameters is provided to MAC with the CMAC-Config-REQ primitive (see TS 25.321), the PRACH partitioning is provided to PHY using the CPHY-TrCH-Config-REQ primitive (see TS 25.302).

The ASC enumeration shall be such that it corresponds to the order of priority (ASC 0 = highest priority, ASC 7 = lowest priority). ASC 0 shall be used in case of Emergency Call or for reasons with equivalent priority.

At radio bearer setup/reconfiguration each involved logical channel is assigned a MAC Logical channel Priority (MLP) in the range 1,…,8. When the MAC sublayer is configured for RACH transmission in the UE, these MLP levels shall be employed for ASC selection on MAC.

8.6.6.x FPACH/ PRACH Selection (1.28 Mcps TDD only)

Where more than one FPACH is defined, the FPACH that a UE should receive following a UpPCH transmission is defined by the UpPCH signature (SYNC_UL) code that the UE used. The FPACH/PRACH number = N mod M where N denotes the signature number (0 7) and M denotes the number of FPACH/PRACH combinations that have been defined. The FPACH/PRACH number indicates the position of the FPACH/PRACH description in the IE"PRACH infoinfo".

The PRACH that should be used is that associated with the FPACH in the IE "PRACH info".

10.3.6.6 ASC setting

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE mode					
>FDD					
>>Available signature Start Index	MP		Integer(0..15)	See Note 1 below.	
>>Available signature End Index	MP		Integer(0..15)	See Note 1 below.	
>>Assigned Sub-Channel Number	MP		Bitstring(4)	See Note 2 below.	
>TDD					
>>CHOICE TDD option					REL-4
>>>3.84 Mcps TDD					REL-4
>>>>Available Channelisation codes indices	MD		Bitstring(8)	See Note 3 below. Default is all defined in PRACH Info.	
>>>1.28 Mcps TDD					REL-4
>>>>Available SYNC_UL codes indices	MD		Bitstring(8)	See Note 5 below. Default is all defined in SYNC_UL Info.	REL-4
>>CHOICE subchannel size	MP				
>>>Size1					
>>>>Available Subchannels	MP		null	Indicates all	
>>>Size2					
>>>>Available Subchannels	MD		Bitstring (2)	Each bit indicates if the subchannel is available for the given ASC. 01: subchannel 0 10: subchannel 1 11: all subchannels Default is all subchannels.	
>>>Size4					
>>>>Available Subchannels	MD		Bitstring (4)	Each bit indicates if the subchannel is available for the given ASC. 0001: subchannel 0 0011: subchannels 0 & 1 ... 1111: all subchannels. Default is all subchannels.	
>>>Size8					
>>>>Available Subchannels	MD		Bitstring (8)	Each bit indicates if the subchannel is available for the given ASC. 00000001: subchannel 0 00000011: subchannels 0 & 1 ... 11111111: all subchannels Default is all subchannels.	

NOTE 1: In FDD, the list of available signatures is renumbered from signature index 0 to signature index N-1, where N is the number of available signatures, starting with the lowest available signature number and continuing in sequence, in the order of increasing signature numbers.

- List of available signatures : 16 or less signatures are available.

- Example: only signatures 0, 5, 10 and 15 are available, then :

  - Signature 0 is : available signature index 0

  - Signature 5 is : available signature index 1

  - Signature 10 is : available signature index 2

  - Signature 15 is : available signature index 3

NOTE2: The usage of this IE is conditional upon setting of IE "AICH transmission timing". In case that "AICH transmission timing" = 0, the leftmost bit shall be ignored. The 3 rightmost (least significant bits) shall be repeated 4 times to form a bitstring of length 12 bits. In case that "AICH transmission timing" = 1, the bitstring shall be repeated 3 times to form a bitstring of length 12 bits.

In both cases, for the resulting bitstring (that includes the repetitions) bit-wise logical AND operation with the IE "Available Sub Channel number" included in IE "PRACH info (for RACH)" shall be performed.

The resulting bitstring, after logical AND operation, indicates the sub-channels assigned to the respective ASC. This bitstring shall be interpreted by the UE in the same way as specified for the IE "Available Sub-Channel Number" , see subclause 10.3.6.61 (i.e. each bit set to 1 or 0 indicates availability or non-availability, respectively, of sub-channel number _x, x= 0 to 11, for the respective ASC).

NOTE3: In 3.84Mcps TDD, the list of available channelisation codes (defined in PRACH info) is renumbered from channelisation code index 0 to channelisation code index N-1, where N is the number of available channelisation codes, starting with the lowest available channelisation code number and continuing in sequence, in the order of increasing channelisation code numbers.

List of available channelisation codes : 8 or less channelisation codes are available.

The i-th bit of the bitmap defined in the IE "Available Channelisation Code indices" defines whether the channelisation code with the available channelisation code index i is to be used for this ASC (bit set means used, bit unset means not used). Only the low N bits shall be used in the bitmap, where N is the number of available channelisation codes defined in PRACH info.

Ex : spreading factor 16, channelisation codes 16/1, 16/2, 16/5, 16/10 are available :

Channelisation code 16/1 is : available channelisation code index 0

Channelisation code 16/2 is : available channelisation code index 1

Channelisation code 16/5 is : available channelisation code index 2

Channelisation code 16/10 is : available channelisation code index 3

Available Channelisation Code indices has the value ’1100’ means: Channelisation Codes 16/5 and 16/10 are available for this ASC.

NOTE4: In TDD, the subchannel description is found in 25.224

NOTE5: In 1.28Mcps TDD, the list of available SYNC_UL codes is renumbered from SYNC_UL code index 0 to SYNC_UL code index N-1, where N is the number of available SYNC_UL code, starting with the lowest available SYNC_UL code number and continuing in sequence, in the order of increasing SYNC_UL code numbers.

- List of available SYNC_UL codes : 8 or less SYNC_UL codes are available.

The i-th bit of the bitmap defined in the IE "SYNC_UL codes bitmap" defines whether the SYNC_UL code with the SYNC_UL code index i is to be used for this ASC (bit set means used, bit unset means not used). Only the low N bits shall be used in the bitmap, where N is the number of available channelisation codes defined in PRACH info.

- Example: SYNC_UL codes 0, 2, 5,7 are available, then :

  - SYNC_UL code 0 is : available SYNC_UL code index 0

  - SYNC_UL code 2 is : available SYNC_UL code index 1

  - SYNC_UL code 5 is : available SYNC_UL code index 2

  - SYNC_UL code 7 is : available SYNC_UL code index 2

  - "SYNC_UL codes bitmap" has the value 'xxxx1100' means: SYNC_UL codes 5 and 7 are available for this ASC.

UL Target SIR	MP		Real(-11 .. 20 by step of 0.5)	In dB	REL-4
Power Ramping Step	MP		Integer(0,1,2,3)	In dB	REL-4
Max SYNC_UL Transmissions	MP		Integer(1,2,4,8)	Maximum numbers of SYNC_UL transmissions in a power ramping sequence.	REL-4

10.3.10 Multiplicity values and type constraint values

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

Constant	Explanation	Value
CN information		
maxCNdomains	Maximum number of CN domains	4
UTRAN mobility information		
maxRAT	Maximum number or Radio Access Technologies	maxOtherRAT + 1
maxOtherRAT	Maximum number or other Radio Access Technologies	15
maxURA	Maximum number of URAs in a cell	8
maxInterSysMessages	Maximum number of Inter System Messages	4
maxRABsetup	Maximum number of RABs to be established	16
UE information		
maxtransactions	Maximum number of parallel RRC transactions in downlink	25
maxPDCPalgoType	Maximum number of PDCP algorithm types	8
maxDRACclasses	Maximum number of UE classes which would require different DRAC parameters	8
maxFrequencybands	Maximum number of frequency bands supported by the UE as defined in 25.102	4
maxPage1	Number of UEs paged in the Paging Type 1 message	8
maxSystemCapability	Maximum number of system specific capabilities that can be requested in one message.	16
RB information		
maxPredefConfig	Maximum number of predefined configurations	16
maxRB	Maximum number of RBs	32
maxSRBsetup	Maximum number of signalling RBs to be established	8
maxRBperRAB	Maximum number of RBs per RAB	8
maxRBallRABs	Maximum number of non signalling RBs	27
maxRBMuxOptions	Maximum number of RB multiplexing options	8
maxLoCHperRLC	Maximum number of logical channels per RLC entity	2
TrCH information		
maxTrCH	Maximum number of transport channels used in one direction (UL or DL)	32
maxTrCHpreconf	Maximum number of preconfigured Transport channels, per direction	16
maxCCTrCH	Maximum number of CCTrCHs	8
maxTF	Maximum number of different transport formats that can be included in the Transport format set for one transport channel	32
maxTF-CPCH	Maximum number of TFs in a CPCH set	16
maxTFC	Maximum number of Transport Format Combinations	1024
maxTFCI-1-Combs	Maximum number of TFCI (field 1) combinations	512
maxTFCI-2-Combs	Maximum number of TFCI (field 2) combinations	512
maxCPCHsets	Maximum number of CPCH sets per cell	16
maxSIBperMsg	Maximum number of complete system information blocks per SYSTEM INFORMATION message	16
maxSIB	Maximum number of references to other system information blocks.	32
maxSIB-FACH	Maximum number of references to system information blocks on the FACH	8
PhyCH information		
maxSubCh	Maximum number of sub-channels on PRACH	12
maxPCPCH-APsubCH	Maximum number of available sub-channels for AP signature on PCPCH	12
maxPCPCH-CDsubCH	Maximum number of available sub-channels for CD signature on PCPCH	12
maxSig	Maximum number of signatures on PRACH	16
maxPCPCH-APsig	Maximum number of available signatures for AP on PCPCH	16
maxPCPCH-CDsig	Maximum number of available signatures for CD on PCPCH	16
maxAC	Maximum number of access classes	16
maxASC	Maximum number of access service classes	8
maxASCmap	Maximum number of access class to access service classes mappings	7
maxASCpersist	Maximum number of access service classes for which persistence scaling factors are specified	6
maxPRACH	Maximum number of PRACHs in a cell	16 (1 for 1.28Mcps TDD)

MaxPRACH_FPACH	Maximum number of PRACH / FPACH pairs in a cell (1.28 Mcps TDD)	8
maxFACHPCH	Maximum number of FACHs and PCHs mapped onto one secondary CCPCHs	8
maxRL	Maximum number of radio links	8
maxSCCPCH	Maximum number of secondary CCPCHs per cell	16
maxDPDCH-UL	Maximum number of DPDCHs per cell	6
maxDPCH-DLchan	Maximum number of channelisation codes used for DL DPCH	8
maxDPCHcodesPerTS	Maximum number of codes for one timeslots (TDD)	16
maxPUSCH	Maximum number of PUSCHs	(8)
maxPDSCH	Maximum number of PDSCHs	8
maxPDSCHcodes	Maximum number of codes for PDSCH	16
maxPDSCH-TFCIgroups	Maximum number of TFCI groups for PDSCH	256
maxPDSCHcodeGroups	Maximum number of code groups for PDSCH	256
maxPCPCHs	Maximum number of PCPCH channels in a CPCH Set	64
maxPCPCH-SF	Maximum number of available SFs on PCPCH	7
maxTS	Maximum number of timeslots used in one direction (UL or DL)	14
HiPUSCHIdentities	Maximum number of PDSCH Identities	64
HiPDSCHIdentities	Maximum number of PDSCH Identities	64
Measurement information		
maxTGPS	Maximum number of transmission gap pattern sequences	6
maxAdditionalMeas	Maximum number of additional measurements for a given measurement identity	4
maxMeasEvent	Maximum number of events that can be listed in measurement reporting criteria	8
maxMeasParEvent	Maximum number of measurement parameters (e.g. thresholds) per event	2
maxMeasIntervals	Maximum number of intervals that define the mapping function between the measurements for the cell quality Q of a cell and the representing quality value	1
maxCellMeas	Maximum number of cells to measure	32
maxReportedGSMCells	Maximum number of GSM cells to be reported	6
maxFreq	Maximum number of frequencies to measure	8
maxSat	Maximum number of satellites to measure	16
HiRM	Maximum number that could be set as rate matching attribute for a transport channel	256
Frequency information		
maxFDDFreqList	Maximum number of FDD carrier frequencies to be stored in USIM	4
maxTDDFreqList	Maximum number of TDD carrier frequencies to be stored in USIM	4
maxFDDFreqCellList	Maximum number of neighbouring FDD cells to be stored in USIM	32
maxTDDFreqCellList	Maximum number of neighbouring TDD cells to be stored in USIM	32
maxGSMCellList	Maximum number of GSM cells to be stored in USIM	32
Other information		
maxNumGSMFreqRanges	Maximum number of GSM Frequency Ranges to store	32
maxNumFDDFreqs	Maximum number of FDD centre frequencies to store	8
maxNumTDDFreqs	Maximum number of TDD centre frequencies to store	8
maxNumCDMA200Freqs	Maximum number of CDMA2000 centre frequencies to store	8

11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in TR 25.921. PDU and IE definitions are grouped into separate ASN.1 modules.

11.1 General message structure

```

3GPP TSG-RAN WG2 Meeting #19 **R2-010471**
Sophia Antipolis, France, 19-23 February 2001

CR-Form-v3

CHANGE REQUEST

⌘ **25.331** **CR** **709** ⌘ rev **-** ⌘ Current version: **3.5.0** ⌘

*For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.*

Proposed change affects: ⌘ (U)SIM ☐ ME/UE **X** Radio Access Network **X** Core Network ☐

Title:	⌘	Introduction of UE radio access capability Parameters for 1.28 Mcps TDD
Source:	⌘	TSG-RAN WG2
Work item code:	⌘	LCRTDD-L23
Date:	⌘	2001-02-12
Category:	⌘	**B**
Release:	⌘	REL-4

Use one of the following categories:
F *(essential correction)*
A *(corresponds to a correction in an earlier release)*
B *(Addition of feature),*
C *(Functional modification of feature)*
D *(Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:
2 (GSM Phase 2)
R96 (Release 1996)
R97 (Release 1997)
R98 (Release 1998)
R99 (Release 1999)
REL-4 (Release 4)
REL-5 (Release 5)

Reason for change:	⌘	Support of 1.28 Mpcs TDD is introduced in TS 25.331.
Summary of change:	⌘	Support of 1.28 Mcps TDD is included in IE “capability update requirement”, “measurement capability”, “physical channel capability”, “RF capability”.
Consequences if not approved:	⌘	

Clauses affected:	⌘	8.1.3.6, 10.3.3.2, 10.3.3.21, 10.3.3.25, 10.3.3.33, 10.3.3.42, 11		
Other specs affected:	⌘	☐ Other core specifications ☐ Test specifications ☐ O&M Specifications	⌘	
Other comments:	⌘			

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.1.3.6 Reception of an RRC CONNECTION SETUP message by the UE

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

- ignore the rest of the message;

If the values are identical, the UE shall:

- stop timer T300, and act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;
  - if the UE will be in the CELL_FACH state at the conclusion of this procedure:
    - select PRACH according to subclause 8.6.6.2;
    - select Secondary CCPCH according to subclause 8.6.6.5;
    - if the contents of the variable C_RNTI is empty:
      - perform a cell update procedure according to subclause 8.3.1 and then continue with the procedure as indicated in the following;
- enter a state according to subclause 8.6.3.3;
- submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:
  - set the IE "RRC transaction identifier" to
    - the value of "RRC transaction identifier" in the entry for the RRC CONNECTION SETUP message in the table "Accepted transactions" in the variable TRANSACTIONS; and
    - clear that entry.
  - calculate START values for each CN domain according to subclause 8.5.9 and include the result in the IE "START list";
  - if the IE "UE radio access FDD capability update requirement" included in the RRC CONNECTION SETUP message has the value TRUE:

    include its UTRAN-specific FDD capabilities and its UTRAN –specific capabilities common to FDD and TDD in the IE "UE radio access capability";
  - if the IE "UE radio access <u>3.84Mcps</u> TDD capability update requirement" included in the RRC CONNECTION SETUP message has the value TRUE:

    include its UTRAN-specific <u>3.84Mcps</u> TDD capabilities and its UTRAN –specific capabilities common to FDD and TDD in the IE "UE radio access capability";
  - <u>if the IE "UE radio access 1.28Mcps TDD capability update requirement" included in the RRC CONNECTION SETUP message has the value TRUE:</u>

    <u>include its UTRAN-specific 1.28Mcps TDD capabilities and its UTRAN –specific capabilities common to FDD and TDD in the IE "UE radio access capability";</u>
  - if the IE "System specific capability update requirement list" is present in the RRC CONNECTION SETUP message:
    - include its inter-RAT capabilities for the requested systems in the IE "UE system specific capability".

When of the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

- if the UE has entered CELL_FACH state:

- start timer T305 if periodical cell update has been requested in system information block type 1;

- update its variable UE_CAPABILITY_TRANSFERRED which UE capabilities it has transmitted to the UTRAN;

- set the "Status" in the variable INTEGRITY_ PROTECTION_INFO to "Not started";

- set the "Historical status" in the variable INTEGRITY_ PROTECTION_INFO to "Never been active";

and the procedure ends.

10.3.3.2 Capability Update Requirement

This IE indicates to the UE which specific capabilities to transfer to the network.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE radio access FDD capability update requirement	MP		Boolean	TRUE indicates update required	
UE radio access 3.84Mcps TDD capability update requirement	MP		Boolean	TRUE indicates update required	Name changed in REL-4
UE radio access 1.28Mcps TDD capability update requirement	MP		Boolean	TRUE indicates update required	REL-4
System specific capability update requirement list	OP	1 to <maxSystemCapability>			
>System specific capability update requirement	MP		Enumerated (GSM)		

Default value is:

"UE radio capability FDD update requirement" = false

"UE radio capability 3.84Mcps TDD update requirement" = false

"UE radio capability 1.28Mcps TDD update requirement" = false

"System specific capability update requirement" not present.

10.3.3.21 Measurement capability

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Need for downlink compressed mode					
FDD measurements	MP		Boolean	TRUE means that the UE requires DL compressed mode in order to perform measurements on FDD	
3.84Mcps TDD measurements	CV *3.84Mcps_tdd_sup*		Boolean	TRUE means that the UE requires DL compressed mode in order to perform measurements on 3.84Mcps TDD	Name changed in REL-4
1.28Mcps TDD measurements	CV *1.28Mcps_tdd_sup*		Boolean	TRUE means that the UE requires DL compressed mode in order to perform measurements on 1.28Mcps TDD	REL-4
GSM 900	CV *Gsm900_sup*M		Boolean	TRUE means that the UE requires DL compressed mode in order to perform measurements on GSM 900	
DCS 1800	CV *Gsm1800_sup*		Boolean	TRUE means that the UE requires DL compressed mode in order to perform measurements on DCS 1800	
GSM 1900	CV *Gsm1900_sup*		Boolean	TRUE means that the UE requires DL compressed mode in order to perform measurements on GSM 1900	
Multi-carrier measurement	CV *mc_sup*		Boolean	TRUE means that the UE requires DL compressed mode in order to perform measurements on multi-carrier	
Need for uplink compressed mode					
FDD measurements	MP		Boolean	TRUE means that the UE requires UL compressed mode in order to perform measurements on FDD	
3.84Mcps TDD measurements	CV *3.84Mcps_tdd_sup*		Boolean	TRUE means that the UE requires UL compressed mode in order to perform measurements on 3.84Mcps TDD	Name changed in REL-4
1.28Mcps TDD measurements	CV *1.28Mcps_tdd_sup*		Boolean	TRUE means that the UE requires DL compressed mode in order to perform measurements on 1.28Mcps TDD	REL-4
GSM 900	CV *Gsm900_sup*		Boolean	TRUE means that the UE requires UL compressed mode in order to perform measurements on GSM 900	
DCS 1800	CV *Gsm1800_sup*		Boolean	TRUE means that the UE requires UL compressed mode in order to perform measurements on DCS 1800	
GSM 1900	CV *Gsm1900_sup*		Boolean	TRUE means that the UE requires UL compressed mode in order to perform measurements on GSM 1900	
Multi-carrier measurement	CV *mc_sup*		Boolean	TRUE means that the UE requires UL compressed mode in order to perform	

				measurements on multi-carrier	

Condition	Explanation
3.84Mcps_tdd_sup	Presence is mandatory if an IE "TDD RF capability" is present with the IE "Chip rate capability" set to "3.84Mcps". Otherwise this field is not needed in the message.
1.28Mcps_tdd_sup	Presence is mandatory if an IE "TDD RF capability" is present with the IE "Chip rate capability" set to "1.28Mcps". Otherwise this field is not needed in the message.
Gsm900_sup	Presence is mandatory if IE Support of GSM900 has the value TRUE. Otherwise this field is not needed in the message.
Gsm1800_sup	Presence is mandatory if IE Support of GSM1800 has the value TRUE. Otherwise this field is not needed in the message.
Gsm1900_sup	Presence is mandatory if IE Support of GSM1900 has the value TRUE. Otherwise this field is not needed in the message.
mc_sup	Presence is mandatory if IE Support of multi-carrier has the value TRUE. Otherwise this field is not needed in the message.

10.3.3.25 Physical channel capability

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Downlink physical channel capability information elements					
FDD downlink physical channel capability	CH-*fdd_req_sup*				
>Max no DPCH/PDSCH codes	MP		Integer (1..8)	Maximum number of DPCH/PDSCH codes to be simultaneously received	
>Max no physical channel bits received	MP		Integer (600, 1200, 2400, 3600, 4800, 7200, 9600, 14400, 19200, 28800, 38400, 48000, 57600, 67200, 76800)	Maximum number of physical channel bits received in any 10 ms interval (DPCH, PDSCH, S-CCPCH)	
>Support for SF 512	MP		Boolean	TRUE means supported	
>Support of PDSCH	MP		Boolean	TRUE means supported	
>Simultaneous reception of SCCPCH and DPCH	MP		Boolean	TRUE means supported	
>Simultaneous reception of SCCPCH, DPCH and PDSCH	CV-*if_sim_rec_pdsch_sup*		Boolean	TRUE means supported	
>Max no of S-CCPCH RL	CV-*if_sim_rec*		Integer(1)	Maximum number of simultaneous S-CCPCH radio links	
3.84Mcps TDD downlink physical channel capability	CH-*3.84Mcps_tdd_req_sup*				Name changed in REL-4
>Maximum number of timeslots per frame	MP		Integer (1..14)		
>Maximum number of physical channels per frame	MP		Integer (1..224)		
>Minimum SF	MP		Integer (1, 16)		
>Support of PDSCH	MP		Boolean	TRUE means supported	
>Maximum number of physical channels per timeslot	MP		Integer (1..16)		
1.28Mcps TDD downlink physical channel capability	CH-*1.28Mcps_tdd_req_sup*				REL-4
>Maximum number of timeslots per subframe	MP		Integer (1..6)		REL-4
>Maximum number of physical channels per subframe	MP		Integer (1..96)		REL-4
>Minimum SF	MP		Integer (1, 16)		REL-4
>Support of PDSCH	MP		Boolean	TRUE means supported	REL-4
>Maximum number of physical channels per timeslot	MP		Integer (1..16)		REL-4
>Support of 8PSK	MP		Boolean	TRUE means supported	REL-4
Uplink physical channel capability information elements					

>FDD uplink physical channel capability	CH-*fdd_req_sup*				
>Maximum number of DPDCH bits transmitted per 10 ms	MP		Integer (600, 1200, 2400, 4800. 9600, 19200. 28800, 38400, 48000, 57600)		
>Support of PCPCH	MP		Boolean	TRUE means supported	
3.84Mcps TDD uplink physical channel capability	CH-*3.84Mcps_tdd_req_sup*				Name changed in REL-4
>Maximum Number of timeslots per frame	MP		Integer (1..14)		
>Maximum number of physical channels per timeslot	MP		Integer (1, 2)		
>Minimum SF	MP		Integer (1, 2, 4, 8, 16)		
>Support of PUSCH	MP		Boolean	TRUE means supported	
1.28Mcps TDD uplink physical channel capability	CH-*1.28Mcps_tdd_req_sup*				REL-4
>Maximum Number of timeslots per subframe	MP		Integer (1..6)		REL-4
>Maximum number of physical channels per timeslot	MP		Integer (1, 2)		REL-4
>Minimum SF	MP		Integer (1, 2, 4, 8, 16)		REL-4
>Support of PUSCH	MP		Boolean	TRUE means supported	REL-4
>Support of 8PSK	MP		Boolean	TRUE means supported	REL-4

Condition	Explanation
if_sim_rec_pdsch_sup	Presence is mandatory if IE Simultaneous reception of SCCPCH and DPCH = True and IE Support of PDSCH = True. Otherwise this field is not needed in the message.
if_sim_rec	Presence is mandatory if IE capability Simultaneous reception of SCCPCH and DPCH = True. Otherwise this field is not needed in the message.
3.84Mcps_tdd_req_sup	Presence is mandatory if an IE "TDD RF capability" is present with the IE "Chip rate capability" set to "3.84Mcps" and a 3.84Mcps TDD capability update has been requested in a previous message. Otherwise this field is not needed in the message.
1.28Mcps_tdd_req_sup	Presence is mandatory if an IE "TDD RF capability" is present with the IE "Chip rate capability" set to "1.28Mcps" and a 1.28Mcps TDD capability update has been requested in a previous message. Otherwise this field is not needed in the message.
fdd_req_sup	Presence is mandatory if IE Multi-mode capability has the value "FDD" or "FDD/TDD" and a FDD capability update has been requested in a previous message. Otherwise this field is not needed in the message.

10.3.3.33 RF capability

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
FDD RF capability	CH-*fdd_req_sup*				
>UE power class	MP		Enumerated(1..4)	as defined in 3GPP TS 25.101 subclause 6.2.1	
>Tx/Rx frequency separation	MP		Enumerated(190, 174.8-205.2, 134.8-245.2)	In MHz as defined in 3GPP TS 25.101 subclause 5.3. NOTE: Not applicable if UE is not operating in frequency band a (as defined in 25.101).	
TDD RF capability	CH-*tdd_req_sup*	1 to 2		One "TDD RF capability" entity shall be included for every Chip rate capability supported.	Multi=2 is included in REL-4
>UE power class	MP		Enumerated (1..4)	as defined in 3GPP TS 25.102 subclause 6.2.1	
>Radio frequency bands	MP		Enumerated(a, b, c, a+b, a+c, b+c, a+b+c)	as defined in 3GPP TS 25.102 subclause 5.2	
>Chip rate capability	MP		Enumerated(3.84Mcps,1.28Mcps)	as defined in 3GPP TS 25.102	

Condition	Explanation
tdd_req_sup	Presence is mandatory if IE Multi-mode capability has the value "TDD" or "FDD/TDD" and a 3.84Mcps TDD capability update or a 1.28Mcps TDD capability update has been requested in a previous message. Otherwise this field is not needed in the message.
fdd_req_sup	Presence is mandatory if IE Multi-mode capability has the value "FDD" or "FDD/TDD" and a FDD capability update has been requested in a previous message. Otherwise this field is not needed in the message.

10.3.3.42 UE radio access capability

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
ICS version	MP		Enumerated(R99, REL-4)	Indicates the release version of TS 34.123-2 (Implementation Conformance Statement (ICS) proforma specification) that is applicable for the UE.	Value REL-4 added in REL-4
PDCP capability	MP		PDCP capability 10.3.3.24		
RLC capability	MP		RLC capability 10.3.3.34		
Transport channel capability	MP		Transport channel capability 10.3.3.40		
RF capability	MP		RF capability 10.3.3.33		
Physical channel capability	MP		Physical channel capability 10.3.3.25		
UE multi-mode/multi-RAT capability	MP		UE multi-mode/multi-RAT capability 10.3.3.41		
Security capability	MP		Security capability 10.3.3.37		
UP capability	MP		UP capability 10.3.3.45		
Measurement capability	CH-*fdd_req_sup*		Measurement capability 10.3.3.21		

Condition	Explanation
fdd_req_sup	Presence is mandatory if IE Multi-mode capability has the value "FDD" or "FDD/TDD" and a FDD capability update has been requested in a previous message. Otherwise this field is not needed in the message.

11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in TR 25.921. PDU and IE definitions are grouped into separate ASN.1 modules.

11.1 General message structure

3GPP TSG-RAN WG2 Meeting #18
Edinburgh, UK, 15~19 January 2001

R2-010220

CR-Form-v3

CHANGE REQUEST

⌘ **25.834** **CR** **001** ⌘ rev **-** ⌘ Current version: **4.0.0** ⌘

*For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.*

Proposed change affects: ⌘ (U)SIM ☐ ME/UE ☐ Radio Access Network **X** Core Network ☐

Title:	⌘	Tx Diversity
Source:	⌘	TSG-RAN WG2
Work item code:	⌘	LCRTDD-L23
Date:	⌘	18 Jan. 2001
Category:	⌘	**B**
Release:	⌘	REL-4

Use one of the following categories:
***F** (essential correction)*
***A** (corresponds to a correction in an earlier release)*
***B** (Addition of feature),*
***C** (Functional modification of feature)*
***D** (Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:

2	*(GSM Phase 2)*
R96	*(Release 1996)*
R97	*(Release 1997)*
R98	*(Release 1998)*
R99	*(Release 1999)*
REL-4	*(Release 4)*
REL-5	*(Release 5)*

Reason for change:	⌘	In last RAN1#17, TSTD is agreed to be applied to P-CCPCH, DwPCH, and DPCH. And UE must have the knowledge about the usage of TSTD for the appropriate power control of DPCH.
Summary of change:	⌘	New information element "TSTD indicator" is defined and also is included in IE "downlink DPCH info for each RL"
Consequences if not approved:	⌘	

Clauses affected:	⌘	13.3.2.x (new), 13.3.3.x (new)		
Other specs Affected:	⌘	☐ Other core specifications ☐ Test specifications ☐ O&M Specifications	⌘	
Other comments:	⌘			

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

13.3.2.6 Additional parameters to be broadcast

This section identifies parameters that additionally need to be broadcast to support 1.28Mcps TDD.
Depending on the size of the cell a different amount of users can be supported in one timeslot. In order to improve the configuration of the receiver in the UE it is beneficial to provide these information in the system information. It is proposed to include the parameter W in system information block type 5. This parameter provides information about the maximum channel impulse response. This parameter depends on the amount of users that can be served and the environment. This parameter is foreseen to be cell specific.

The allowed values are W=8, 9, 12, 16, 21, 32, 64 (cp [1]). The predefined association of Midamble to Channelisation Codes depends on this parameter (cp. [1]).

1.28Mcps TDD has higher requirements on the uplink timing of transmissions than 3.84Mcps TDD. The means to preserve uplink synchronization are layer1 bits, the SS bits. The SS bits are transmitted every subframe, however, they are often not required that often. Thus the frequency of the update of the adjustment of uplink transmission can be decreased on a case by case basis. Another advantage of the reduction of the update frequency of the adjustment of the uplink transmission is the averaging effect by jointly evaluating a number of SS bits. Thus the probability of false adjustments is reduced. A parameter "Uplink synchronisation step size" is proposed with a value range (1..8) to achieve this.
Consequently, another parameter is reasonable that allows to adjust the step sizes of the uplink transmission adjustment. By providing this parameter the network can reduce the accuracy requirements on a case by case basis. The parameter "Uplink synchronisation frequency" is proposed to allow this adjustment of the step sizes for the adjustment of the uplink transmissions. A value range of (1..8) is proposed.

13.3.2.x Parameter required to inform the usage of TSTD

Depending on the capability of the base station and the characteristics of the physical channels, TSTD can be used to overcome the time varying characteristics of the communication channel. In 1.28Mcps UTRA TDD, TSTD can be applied to P-CCPCH, DwPCH, and DPCH. In case of DPCH, UE shall have the knowledge about the usage of TSTD due to the power control of DPCH. Transmission power control of DPCH is currently discussed for 1.28Mcps in WG1. Similar as for the IE "Tx diversity indicator" for FDD, "TSTD indicator" can be defined and used to inform the application of TSTD to DPCH.

13.3.3 Information elements for 1.28Mcps TDD

NOTE: The tabular description in this section is for information only. Change requests on TS 25.331 may follow different methodology to incorporate changes for release 00.

This section contains a tabular description of required information for physical channel description in a 25.331 like format. The hierarchical structure as specified in the RRC specification is not used but could easily be applied. The differences to the 3.84Mcps TDD mode are highlighted with revision marks. The section numbers in the type and reference column refer to 25.331v3.3.0.

13.3.3.1 Dedicated physical channel information

Uplink DPCH info

Information Element/Group name	Need	Multi	Type and reference	*DESCRIPTION*
~~Uplink DPCH power control info~~	~~OP~~		~~10.3.6.79~~	Not required in 1.28Mcps TDD
~~Uplink Timing Advance~~	~~OP~~			This information element is not required in 1.28Mcps TDD
UL CCTrCH List	MP	1..8		
>TFCS Identity	MD		10.3.5.21	Same as 3.84Mcps TDD
>2nd interleaving mode	MP		Enumerated(Frame, Timeslot)	Same as 3.84Mcps TDD
>Puncturing limit	MP		Real(0.40..1. 0 by step of 0.04)	Same as 3.84Mcps TDD

13.3.3.2 Shared channel information

Details of shared channels have not been decided yet for 1.28Mcps TDD. However, it is foreseen that no modifications are required for shared channels except similar changes as for dedicated channels.

13.3.3.3 RACH procedure information elements

PRACH system information list

Information element	Need	Multi	Type and reference	Semantics description
Sync1 transmission parameters	MP		Sync1 transmission parameters	
PRACH system information	MP	1 .. <maxPRACH>		
>PRACH info	MP		PRACH info See below	
>FPACH info	MP		FPACH info See below	
>Transport channel identity	MP		Transport channel identity 10.3.5.18	
>RACH TFS	MD		Transport format set 10.3.5.23	Default value is the value of "RACH TFS" for the previous PRACH in the list (note : the first occurrence is then MP)
>RACH TFCS	MD		Transport Format Combination Set 10.3.5.20	Default value is the value of "RACH TFCS" for the previous PRACH in the list (note : the first occurrence is then MP)
>PRACH partitioning	MD		PRACH partitioning 10.3.3.45	Default value is the value of "PRACH partitioning" for the previous PRACH in the list (note : the first occurrence is then MP)
>Persistence scaling factors	OP		Persistence scaling factors 10.3.6.40	If this IE is absent, value is the value of "Persistence scaling factors" for the previous PRACH in the list if value exists
>AC-to-ASC mapping	OP		AC-to-ASC mapping 10.3.6.1	Only present in SIB 5 If this IE is absent, value is the value of "Persistence scaling factors" for the previous PRACH in the list if value exists

PRACH info

Information Element/Group name	Need	Multi	Type and reference	Semantics description
2nd interleaving mode	MP		Enumerated(Frame, Timeslot)	Same as 3.84Mcps TDD
Puncturing limit	MP		Real(0.40..1.0 by step of 0.04)	Same as 3.84Mcps TDD
TFCI coding	MP		Integer(4,8,16,32)	Same as 3.84Mcps TDD
Timeslot list	MP	1..6		
>Timeslot number	MP		Integer(1..6)	Reduced range compared to 3.84Mcps TDD mode.
>Midamble Shift	MD		Integer(0..15)	Range depends on cell configuration. A fixed association between channelisation codes and midamble shift is described in 25.928.
>TFCI existence	MP		Boolean	Same as 3.84Mcps TDD
>Code list	MP	1..2		
>>Channelisation Codes	MP		Enumerated((1/1),)(2/1),(2/2),(4/1)..(4/4),(8/1)..(8/8),(16/1)..(16/16))	Same as in 3.84Mcps TDD.

FPACH info

This IE is not used in 3.84Mcps TDD.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Timeslot number	MP		Integer(1..6)	
Midamble Shift	MP		Integer(0..15)	
Channelisation Codes	MP		Integer((16/1)..(16/16))	

Sync1 transmission parameters

These parameters are not used in 3.84Mcps TDD. There are major similarities to the RACH transmission parameters in FDD.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Power Increment	MP		Integer(0,1,2,3)	in dB
M	MP		Integer(1,2,4,8)	Max re-transmissions of UpPTS

13.3.3.4 Common channel information elements

PCCPCH info

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cell parameter Id	MP		Integer(0..127)	
Block STTD indicator	MD		Block STTD indicator 10.3.6.5	Default value is "TRUE" The usage of Block STTD for 1.28 Mcps TDD is currently under discussion in WG1

SCCPCH info

Information Element/Group name	Need	Multi	Type and reference	Semantics description
2nd interleaving mode	MP		Enumerated(Frame, Timeslot)	Same as 3.84Mcps TDD
Puncturing limit	MP		Real(0.40..1.0 by step of 0.04)	Same as 3.84Mcps TDD
Repetition period	MD		Integer(2,4,8,16,32,64)	Same as 3.84Mcps TDD
Repetition length	MP		Integer(1.. Repetition period –1)	Same as 3.84Mcps TDD
Offset	MP		Integer(1..Repetition Period-1)	Same as 3.84Mcps TDD
TFCI coding	MP		Integer(4,8,16,32)	Same as 3.84Mcps TDD
Timeslot list	MP	1..6		
>Timeslot number	MP		Integer(1..6)	Reduced range compared to 3.84Mcps TDD mode.
>Midamble Shift	MD		Integer(0..15)	Range depends on cell configuration. A fixed association between channelisation codes and midamble shift is described in 25.928.
~~Burst Type~~	~~MP~~			This information is not needed in 1.28Mcps TDD because only one burst type exists.
> TFCI existence	MP		Boolean	Same as 3.84Mcps TDD
>Code list	MP	1..16		
>>Channelisation Codes	MP		Integer(1..16)	Same as 3.84Mcps TDD mode. Only spreading factor 16 is applicable.

PICH info

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Channelisation code	MD		Enumerated ((16/1)...(16/16))	Same as 3.84Mcps TDD.
Timeslot	MD		Timeslot number 10.3.6.72	Same as 3.84Mcps TDD.
~~Burst type~~	~~MP~~		~~Enumerated (Typ1,Typ2)~~	
Midamble shift	MD		Integer(0..15)	Range depends on cell configuration. A fixed association between channelisation codes and midamble shift is described in 25.928.
Repetition period/length	MD		Enumerated((4/2),(8/2), (8/4),(16/2), (16/4), (32/2),(32/4), (64/2),(64/4))	Same as 3.84Mcps TDD.
Offset	MP		Integer (0...Repetition period -1)	Same as 3.84Mcps TDD.
Paging indicator length	MD		Integer (2, 4, 8)	Same as 3.84Mcps TDD.
N_{GAP}	MD		Integer(2, 4, 8)	Same as 3.84Mcps TDD.
N_{PCH}	MD		Integer(1 .. 8)	Same as 3.84Mcps TDD.

13.3.3.5 Additional information elements for BCH

These information are proposed to be additionally included in System information block type 5 (in addition to the parameters for common channels)

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Uplink synchronisation step size	MP		Integer(1..8)	This parameter specifies the step size to be used for the adjustment of the uplink transmission timing
Uplink synchronisation frequency	MP		Integer(1..8)	This parameter specifies the frequency of the adjustment of the uplink transmission timing
W	MP		Integer(8, 9, 12, 16, 21, 32, 64)	

13.3.3.x Additional information element for TSTD

The following information element is proposed to be additionally included in IE "Downlink DPCH info for each RL".

Information Element/Group name	Need	Multi	Type and reference	Semantics description
TSTD indicator	MD		Boolean	Default value is "TRUE"

13.3.4 IE change example for 1.28Mcps TDD

NOTE: The tabular description in this section is for information only. Change requests on TS 25.331 may follow different methodology to incorporate changes for release 00.

It has been decided to distinguish the differences of FDD and TDD with the help of the CHOICE mode notation as described in [5] and [6]. This notation is suitable to both outline the desired commonalties between both modes and shows also the differences in an easy-to-read manner.
In order to include information elements that are specific for 1.28Mcps TDD into the existing [5] a similar principle could be used. An example how the differences between 1.28 Mcps TDD and 1.28 Mcps TDD could be shown is given in the table below.

10.3.6.49 Primary CCPCH info

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE *mode*	MP			
>FDD

Example for inclusion of 1.28 Mcps TDD in tabular format

The principles how 1.28 Mcps TDD option can be included in the tabular format of [5] have been described. It is proposed to apply a notation as shown in the above example in order to represent 1.28 Mcps TDD in [5] in R2000.

14 Key Procedures of TDD Low Chip Rate Option

14.1 RACH Procedure

14.1.1 Basic RACH Mechanism

The RACH mechanism that has been defined for the 1.28 Mcps TDD [1] is a two-step process that is similar to the two-step process that has been adopted for UTRA FDD.

Uplink Pilot Timeslot UpPTS is used for transmission of random access signatures, called SYNC1. The UpPTS is located in each 5 ms subframe and it is composed of 128 chips of SYNC1 and 32 chips of guard period. There should be 256 different SYNC1codes for the whole system and each 8 SYNC1 codes are allocated in a code group. Each 8 SYNC1 codes group corresponds to one SYNC code which is an identity of a cell and used for DL synchronization purpose.

When a RACH access is made with the 1.28 Mcps TDD option the following steps are completed:

i) The UE randomly chooses its SYNC1 code for cell access out of the 8 possible SYNC1 codes of the code group that is indicated through the used SYNC sequence in DwPTS. The UE transmits using this SYNC1 code in the

CR-Form-v3

CHANGE REQUEST

⌘ **25.834** **CR** **002** ⌘ rev **-** ⌘ Current version: **4.0.0** ⌘

*For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.*

Proposed change affects: ⌘ (U)SIM ☐ ME/UE **X** Radio Access Network **X** Core Network ☐

Title:	⌘	Propagation delay measurement
Source:	⌘	TSG-RAN WG2
Work item code:	⌘	LCRTDD-L23
Date:	⌘	18 Jan. 2001
Category:	⌘	**B**
Release:	⌘	REL-4

Use one of the following categories:
***F** (essential correction)*
***A** (corresponds to a correction in an earlier release)*
***B** (Addition of feature),*
***C** (Functional modification of feature)*
***D** (Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:

2	*(GSM Phase 2)*
R96	*(Release 1996)*
R97	*(Release 1997)*
R98	*(Release 1998)*
R99	*(Release 1999)*
REL-4	*(Release 4)*
REL-5	*(Release 5)*

Reason for change:	⌘	To support the propagation delay measurement, which is already agreed in the RAN1#17, UE must transmit the $UpPCH_{ADV}$ to Node B.
Summary of change:	⌘	1. Information elements for propagation delay measurement ($UpPCH_{ADV}$ and $UpPCH_{POS}$) are defined. 2. $UpPCH_{ADV}$ is proposed to be transmitted from UE to Node B together with IE "Measured results on RACH"
Consequences if not approved:	⌘	

Clauses affected:	⌘	10.3.x (new), 13.3.2.x (new), 13.3.3.x (new)		
Other specs Affected:	⌘	☐ Other core specifications ☐ Test specifications ☐ O&M Specifications	⌘	
Other comments:	⌘			

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10.3 UTRAN Measurements

UTRAN measurements specified for 3.84 Mcps TDD are also used in 1.28 Mcps TDD. Ranges and accuracy have to be adapted.

10.3.x Received SYNC_UL Timing Deviation

Definition	'Received SYNC_UL Timing Deviation' is the time difference $UpPCH_{POS} = UpPTS_{Rxpath} - UpPTS_{TS}$ Where $UpPTS_{Rxpath}$: time of the reception in the Node B of the SYNC_UL to be used in the uplink synchronization process $UpPTS_{TS}$: time instance two symbols prior to the end of the DwPCH according to the Node B internal timing

10.4 Compressed Mode to Monitor 1.28Mcps TDD

The parameters currently specified for FDD compressed mode [10] [5] support the monitoring of 1.28 Mcps TDD cells.

The transmission gap pattern length is defined in frames. A frame length of 10ms consists of two 1.28 Mcps TDD subframes of 5ms length. Because it is not possible to shift the transmission gap in consecutive pattern repetitions, it is effective to search with an appropriately long gap.

Using the double frame method [9] a transmission gap length of 14 slots is a suitable parameter setting.

Therefore, this enables UEs in FDD mode to monitor 1.28 Mcps TDD cells by means of FDD compressed mode.

11 Primitives of the physical layer

11.1 Generic names of primitives between layers 1 and 2

No modifications for UTRA TDD 1.28 Mcps are required compared to UTRA TDD 3.84 Mcps.

11.2 Generic names of primitives between layers 1 and 3

No modifications for UTRA TDD 1.28 Mcps are required compared to UTRA TDD 3.84 Mcps.

11.2.1 STATUS PRIMITIVES

No modifications for UTRA TDD 1.28 Mcps are required compared to UTRA TDD 3.84 Mcps.

11.2.2 CONTROL PRIMITIVES

No modifications for UTRA TDD 1.28 Mcps are required compared to UTRA TDD 3.84 Mcps.

11.3 Parameter definition

11.3.1 Error code

No modifications for UTRA TDD 1.28 Mcps are required compared to UTRA TDD 3.84 Mcps.

11.3.2 Event value

No modifications for UTRA TDD 1.28 Mcps are required compared to UTRA TDD 3.84 Mcps.

11.3.3 Access Information

For the UTRA TDD 1.28 Mcps the access information options are:

- Ready for RACH data transmission (when Ack on FPACH has been received);
- No response received in FPACH while maximum number of synchronisation attempts has been performed.

11.3.4 Transport Format Subset

No modifications for UTRA TDD 1.28 Mcps are required compared to UTRA TDD 3.84 Mcps.

11.3.5 Physical channel description

In addition to the physical channels defined for UTRA TDD, three physical channels are added to support low chip rate TDD option, they are: DwPTS, UpPTS and FPACH. Besides, two physical channels, Primary SCH and Secondary SCH, are not needed in low chip rate TDD option.

Because there is only one burst type in low chip rate TDD option, "burst type" defined as a parameter for physical channel is not necessary.

Due to the different RACH procedure of low chip rate TDD option, the Access Service Class selection applies to UpPTS, rather than PRACH (see section 14.1.4).

Shared channels, PUSCH and PDSCH, will be supported by TDD low chip rate option, but details are f.f.s.

The added physical channels and the modifications for PRACH are described in the following:

11.3.5.1 DwPTS

- Tx diversity mode.
- SYNC code ID

11.3.5.2 UpPTS

- SYNC1 code ID

11.3.5.3 FPACH

- Scrambling code.
- Channelisation code.
- Timeslot
- Midamble shift
- Tx diversity mode.

11.3.5.4 PRACH

- Spreading factor for data part
- Power control info:
  - UL target SIR

  - Primary CCPCH DL TX power
  - UL interference
- Access Service Class Selection:
- Timeslots
- Spreading Codes
- Midamble Shift

12 Layer 2 Services and Functions

12.1 MAC Services and Functions

12.1.1 MAC Services to upper layers

MAC services to upper layers, logical channels and mapping between logical channels and transport channels are identical for UTRA TDD 3.84 Mcps and 1.28 Mcps.

12.1.1 MAC functions

No modifications for 1.28Mcps TDD are required compared to 3.84Mcps TDD.

12.2 RLC Services and Functions

No modifications for UTRA TDD low chip rate option are required compared to UTRA TDD 3.84 Mcps

12.3 PDCP Services and Functions

No modifications for UTRA TDD low chip rate option are required compared to UTRA TDD 3.84 Mcps

12.4 Broadcast/Multicast Control - Services and Functions

No modifications for UTRA TDD low chip rate option are required compared to UTRA TDD 3.84 Mcps

13 Layer 3 - Uu Stratum Services and Functions

13.1 Uu Stratum services

Uu Stratum services are the same as for UTRA FDD / 3.84 Mcps TDD.

13.2 RRC functions

RRC functions for 1.28 Mcps TDD are common with 3.84 Mcps TDD, except for timing advance control which is maintained by L1 function Uplink Synchronization in 1.28 Mcps TDD.

13.3 RRC Protocol Aspects

13.3.1 Discussion on Physical Channel Parameters for 1.28 Mcps TDD

1.28Mcps TDD and 3.84Mcps TDD are both based on CDMA with an additional TDMA component. The most obvious difference is of course the different bandwidth that is used in the both modes. While 3.84Mcps TDD uses a chiprate of 3.84 Mcps the chip rate of 1.28Mcps TDD is 1.28 Mcps. In contrast to 3.84Mcps TDD it is foreseen to be the normal case for 1.28Mcps TDD that several frequency bands are used within one cell. For example if a frequency band of 5 MHz is available it is divided into three frequency bands of 1.6 MHz to be used for 1.28Mcps TDD.
Timing handling is a layer1 functionality due to the high accuracy requirements in 1.28Mcps TDD. Thus timing advance as an RRC functionality is not needed.
Apart from these differences there is a high potential to reuse descriptions of physical channel information in3.84Mcps TDD for 1.28Mcps TDD mode.

13.3.1.1 Parameters required to define physical channels in 1.28Mcps TDD:

- **Timeslot:** The frame structure defines seven timeslots per subframe. The timeslots of the two subframes in a 10ms frame are always associated to each other (except for the FPACH; this will be described later). The first timeslot (TS0) in a subframe is always dedicated to the downlink and the second timeslot (TS1) is always dedicated to the uplink. Thus at most six timeslots may be allocated in one direction in contrast to fourteen in 3.84Mcps TDD.

- **Channelisation code:** The handling of channelisation codes is exactly the same as in 3.84Mcps TDD.

- **Midamble shift:** The handling of midambles (basic midamble code and applied midamble shift) is basically the same as in 3.84Mcps TDD. The basic midamble code is also acquired during synchronisation process and the midamble shift is either explicitly signalled for a particular physical channel or a predefined association between channelisation codes and midamble shifts is used. This association is defined in WG1 specifications.

- **Frame allocation:** As an option the same multiframe structure (defined by an offset, repetition period and repetition length) as used in 3.84Mcps TDD can be adopted for 1.28Mcps TDD.

- **Burst type:** Only one burst type exists for 1.28Mcps TDD for traffic channels. Therefore no signalling of the used burst type is required.

- **Modulation:** The basic modulation scheme is the same as in 3.84Mcps TDD. However, in case of usage of spreading factor 1 optionally 8 PSK can be used in contrast to 3.84Mcps TDD.

13.3.1.2 Handling of coded composite transport channels of dedicated or shared type in 1.28Mcps TDD:

In 1.28Mcps TDD multiplexing chain defined in [7] can be adopted with minor modifications. These modifications require only changes that are of no importance for layer 2 and layer 3 (i.e. specification of mapping of bits on the two timeslots in the different subframes).

Thus the required parameters for the specification of coded composite transport channels are the same as in 3.84Mcps TDD mode i.e.

- **Multiple CCTrCHs:** A list of up to 8 CCTrCHs can be configured. Thus an identifier for the CCTrCHs is required (TFCS Identity)

- **2nd interleaving mode:** Whether the frame or timeslot related 2nd interleaving mode is used depends on the requirements. Same as in 3.84Mcps TDD mode.

- **Puncturing limit:** Dynamic rate matching is used both in uplink and downlink. Same as in 3.84Mcps TDD mode.

- **TFCI coding:** The channel coding can be adapted to the requirements. Same as in 3.84Mcps TDD mode.

- **TFCI existence per timeslot:** Depending on the requirements a TFCI may or may not be included in particular timeslots. Same as in 3.84Mcps TDD mode.

- **Multiple timeslots per CCTrCH:** A number of timeslots may be allocated for one CCTrCH. Same as in 3.84Mcps TDD mode.

- **Channelisation codes:** In downlink direction rather multicode configuration than variable codes can be configured. In uplink direction both multicode and variable spreading are supported. Same as in 3.84Mcps TDD mode.

- **Time info:** The concept of time limited channels can be adopted from 3.84Mcps TDD mode.

13.3.2 Parameter description for 1.28Mcps TDD

13.3.2.1 Parameters for RACH procedure specification

The random access procedure for 1.28Mcps TDD is described in detail in [1].
The SYNC1 code transmission is basically the contention based mechanism in 1.28Mcps TDD. Major similarities can be noticed between preamble transmissions in FDD and SYNC1 transmissions in 1.28Mcps TDD. Thus the parameters M (maximum number of SYNC1 transmissions) are broadcast as in FDD to control the RACH procedure. Additionally, a parameter defining the step sizes to be used for the power ramping for successive SYNC1 transmissions is proposed to be included. This gives operators further means to control the RACH procedure.

There is essentially no difference between a PRACH compared to a DPCH since uplink synchronisation is already achieved with the help of the SYNC1 codes. Thus the only difference between the PRACH and the DPCH is that it is assigned to be part of the random access procedure. Since similar procedures are used for 1.28Mcps TDD as for 3.84Mcps TDD similar messages are send over the RACH transport channel.

In principle the configuration of the PRACH can have the same flexibility as a DPCH.

The FPACH is a physical channel with similarities to the AICH in FDD. It carries only a small number of bits containing information to adjust the uplink transmissions (power control, synchronisation, ...). One FPACH transmission is only comprised of a single sub-frame. Due to the limited amount of required transmission capacity the FPACH uses only spreading factor 16.

When sending a SYNC1 sequence, the UE knows which FPACH, PRACH and S-CCPCH resources will be used for the access. This information is provided in system information on BCCH.

There is a predefined correspondence between a P-RACH and a FPACH, and an implicit correspondence between SYNC1 signatures and FPACHs, according to the following rule:

FPACH/PRACH number = N mod M,

where FPACH/PRACH number is the FPACH/PRACH description position within the IE 'PRACH system information list', (see section 13.3.3) e.g. the first configured PRACH/FPACH pair gets number 0, the second configured PRACH/FPACH gets number 1 and so on. This number is the parameter M in the equation above.
N is the number of the chosen signature (range 0..7). In a cell, at least one PRACH and one associated FPACH shall be configured. Up to a maximum of 8 PRACH/FPACH pairs can be configured.

The SCCPCH used for one UE is chosen in the same way as in 3.84Mcps TDD and FDD based on the Initial UE Identity in idle mode and based on the old U-RNTI in connected mode.

13.3.2.2 Parameters required to define the primary CCPCH

Essentially, the description of the PCCPCH in 1.28Mcps TDD is much simpler than in 3.84Mcps TDD because the timeslot for the PCCPCH is defined to be TS0 in 1.28Mcps TDD while the timeslot is flexible in 3.84Mcps TDD depending on the location of the SCH. Furthermore, in 1.28Mcps TDD there is in contrast to 3.84Mcps TDD only one burst type. Due to the different nature of the synchronization process there are no different synchronization cases. The usage of Block STTD is currently discussed for 1.28Mcps TDD in WG1.
Thus the only parameters describing the PCCPCH is the cell parameter id and Block STTD if it is decided.
The primary CCPCH can be used for cell identification in a similar way for the identification of cells as the Primary CPICH info in FDD and the primary CCPCH info in TDD.

13.3.2.3 Parameters required to define the secondary CCPCH

The secondary CCPCH can be described in a similar way as in 3.84Mcps TDD. Essentially, the only difference is the absence of the burst type because there is only one burst type in 1.28Mcps TDD.

13.3.2.4 Parameters required to define the PICH

Essentially, the concept for the paging indicator channel can be adopted from the 3.84Mcps TDD mode. Thus there are similar changes needed as for most of the other physical channels, i.e. the burst type is not required as a parameter.

13.3.2.5 Parameters required to define shared channels

Similar as for the other physical channels only minor changes can be expected. However, shared channels are out of the scope of this document.

13.3.2.6 Additional parameters to be broadcast

This section identifies parameters that additionally need to be broadcast to support 1.28Mcps TDD.
Depending on the size of the cell a different amount of users can be supported in one timeslot. In order to improve the configuration of the receiver in the UE it is beneficial to provide these information in the system information. It is proposed to include the parameter W in system information block type 5. This parameter provides information about the maximum channel impulse response. This parameter depends on the amount of users that can be served and the environment. This parameter is foreseen to be cell specific.

The allowed values are W=8, 9, 12, 16, 21, 32, 64 (cp [1]). The predefined association of Midamble to Channelisation Codes depends on this parameter (cp. [1]).

1.28Mcps TDD has higher requirements on the uplink timing of transmissions than 3.84Mcps TDD. The means to preserve uplink synchronization are layer1 bits, the SS bits. The SS bits are transmitted every subframe, however, they are often not required that often. Thus the frequency of the update of the adjustment of uplink transmission can be decreased on a case by case basis. Another advantage of the reduction of the update frequency of the adjustment of the uplink transmission is the averaging effect by jointly evaluating a number of SS bits. Thus the probability of false adjustments is reduced. A parameter "Uplink synchronisation step size" is proposed with a value range (1..8) to achieve this.
Consequently, another parameter is reasonable that allows to adjust the step sizes of the uplink transmission adjustment. By providing this parameter the network can reduce the accuracy requirements on a case by case basis. The parameter "Uplink synchronisation frequency" is proposed to allow this adjustment of the step sizes for the adjustment of the uplink transmissions. A value range of (1..8) is proposed.

13.3.2.x Information element for propagation delay measurement

In 1.28Mcps TDD, knowing the received timing of UpPCH or PRACH does not allow the Node B to measure the propagation delay, because the transmission timing of those physical channels are adjusted by the UE for uplink synchronization. For SRNC to measure the propagation delay when PRACH is sent, the following two measurement values can be used,

- $UpPCH_{ADV}$: Difference between the Rx timing and initial Tx timing of a UE.
- $UpPCH_{POS}$: Received starting position of the UpPCH. The reference time ($UpPCH_{POS}$ = 0) is two symbols prior to the end of the DwPCH. Any received starting position of the UpPCH after that point of time is positive.

Then, SRNC can calculate the propagation delay using the above values as follows.

$$\text{Propagation Delay} = (UpPCH_{ADV} + UpPCH_{POS} - 8*16\ T_C) / 2$$

To support this propagation delay measurement, the UE shall transmit the $UpPCH_{ADV}$ to SRNC.

Following Figure x illustrates the timing of UpPCH transmission.

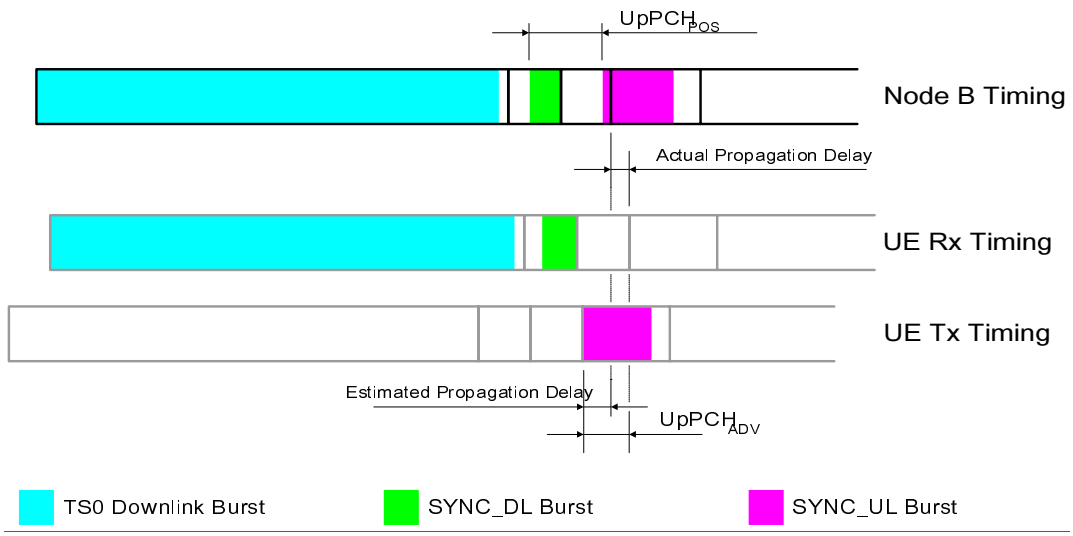

Figure x: Timing of the UpPCH transmission.

13.3.3 Information elements for 1.28Mcps TDD

NOTE: The tabular description in this section is for information only. Change requests on TS 25.331 may follow different methodology to incorporate changes for release 00.

This section contains a tabular description of required information for physical channel description in a 25.331 like format. The hierarchical structure as specified in the RRC specification is not used but could easily be applied. The differences to the 3.84Mcps TDD mode are highlighted with revision marks. The section numbers in the type and reference column refer to 25.331v3.3.0.

PICH info

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Channelisation code	MD		Enumerated ((16/1)...(16/16))	Same as 3.84Mcps TDD.
Timeslot	MD		Timeslot number 10.3.6.72	Same as 3.84Mcps TDD.
~~Burst type~~	~~MP~~		~~Enumerated (Typ1,Typ2)~~	
Midamble shift	MD		Integer(0..15)	Range depends on cell configuration. A fixed association between channelisation codes and midamble shift is described in 25.928.
Repetition period/length	MD		Enumerated((4/2),(8/2), (8/4),(16/2), (16/4), (32/2),(32/4), (64/2),(64/4))	Same as 3.84Mcps TDD.
Offset	MP		Integer (0...Repetition period -1)	Same as 3.84Mcps TDD.
Paging indicator length	MD		Integer (2, 4, 8)	Same as 3.84Mcps TDD.
N_{GAP}	MD		Integer(2, 4, 8)	Same as 3.84Mcps TDD.
N_{PCH}	MD		Integer(1 .. 8)	Same as 3.84Mcps TDD.

13.3.3.5 Additional information elements for BCH

These information are proposed to be additionally included in System information block type 5 (in addition to the parameters for common channels)

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Uplink synchronisation step size	MP		Integer(1..8)	This parameter specifies the step size to be used for the adjustment of the uplink transmission timing
Uplink synchronisation frequency	MP		Integer(1..8)	This parameter specifies the frequency of the adjustment of the uplink transmission timing
W	MP		Integer(8, 9, 12, 16, 21, 32, 64)	

13.3.3.x Information element for Propagation Delay Measurement

Following information element is proposed to be additionally included in IE "Measured results on RACH" to support the propagation delay measurement.

Information Element/group name	Need	Multi	Type and reference	Semantics description
$UpPCH_{ADV}$	MP		Integer (0..352)	In chips, For 1.28Mcps TDD

13.3.4 IE change example for 1.28Mcps TDD

NOTE: The tabular description in this section is for information only. Change requests on TS 25.331 may follow different methodology to incorporate changes for release 00.

It has been decided to distinguish the differences of FDD and TDD with the help of the CHOICE mode notation as described in [5] and [6]. This notation is suitable to both outline the desired commonalties between both modes and shows also the differences in an easy-to-read manner.
In order to include information elements that are specific for 1.28Mcps TDD into the existing [5] a similar principle could be used. An example how the differences between 1.28 Mcps TDD and 1.28 Mcps TDD could be shown is given in the table below.

10.3.6.49 Primary CCPCH info

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE *mode*	MP			
>FDD				
>>TX Diversity indicator	MD		Boolean	Default value is "TRUE"
>TDD				
>>CHOICE TDD mode				
>>>3.84Mcps				
>>>>CHOICE SyncCase	OP			
>>>>>Sync Case 1				
>>>>>>Timeslot	MP		Integer (0...14)	PCCPCH timeslot
>>>>>Sync Case 2				
>>>>>>Timeslot	MP		Integer(0..6)	
>>>1.28Mcps			Null	(No data)
>>Cell parameters ID	OP		Integer (0...127)	The Cell parameters ID is described in 25.223.
>>Block STTD indicator	MD		Block STTD indicator 10.3.6.5	Default value is "TRUE". The usage of Block STTD is currently under discussion in WG1

Example for inclusion of 1.28 Mcps TDD in tabular format

The principles how 1.28 Mcps TDD option can be included in the tabular format of [5] have been described. It is proposed to apply a notation as shown in the above example in order to represent 1.28 Mcps TDD in [5] in R2000.

14 Key Procedures of TDD Low Chip Rate Option

14.1 RACH Procedure

14.1.1 Basic RACH Mechanism

The RACH mechanism that has been defined for the 1.28 Mcps TDD [1] is a two-step process that is similar to the two-step process that has been adopted for UTRA FDD.

Uplink Pilot Timeslot UpPTS is used for transmission of random access signatures, called SYNC1. The UpPTS is located in each 5 ms subframe and it is composed of 128 chips of SYNC1 and 32 chips of guard period. There should be 256 different SYNC1codes for the whole system and each 8 SYNC1 codes are allocated in a code group. Each 8 SYNC1 codes group corresponds to one SYNC code which is an identity of a cell and used for DL synchronization purpose.

When a RACH access is made with the 1.28 Mcps TDD option the following steps are completed:

3GPP TSG-RAN WG2 Meeting #19 **R2-010563**
Sophia Antipolis, France, 19th – 23rd February 2001

CR-Form-v3

CHANGE REQUEST

⌘ **25.834** **CR** **003** ⌘ rev **r1** ⌘ Current version: **4.0.0** ⌘

*For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.*

Proposed change affects: ⌘ (U)SIM ☐ ME/UE ☒ Radio Access Network ☒ Core Network ☐

Title:	⌘	Update of TR 25.834
Source:	⌘	TSG-RAN WG2
Work item code:	⌘	LCRTDD-L23
Date:	⌘	19 February 2001
Category:	⌘	**B**
Release:	⌘	REL-4

Use one of the following categories:
F *(essential correction)*
A *(corresponds to a correction in an earlier release)*
B *(Addition of feature),*
C *(Functional modification of feature)*
D *(Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:
2 (GSM Phase 2)
R96 (Release 1996)
R97 (Release 1997)
R98 (Release 1998)
R99 (Release 1999)
REL-4 (Release 4)
REL-5 (Release 5)

Reason for change:	⌘	TR 25.834 is updated to reflect the latest concepts for 1.28 Mcps TDD.
Summary of change:	⌘	This CR removes USCH/DSCH operation as an ffs item in 25.834. Tables on UE simultaneous physical channel combinations are updated.
Consequences if not approved:	⌘	

Clauses affected:	⌘	8.2, 9.1, 9.2, 9.3, 9.4, 9.5, 11.3.5, 13.3.2.5
Other specs affected:	⌘	☐ Other core specifications ⌘ ☐ Test specifications ☐ O&M Specifications
Other comments:	⌘	

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at:
http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.2 Types of Transport Channels

A general classification of transport channels is into two groups:

- common channels; and
- dedicated channels (where the UEs can be unambiguously identified by the physical channel, i.e. code, frequency and time slot).

Common transport channel types are the same as for UTRA TDD 3.84 Mcps. Details of operation on RACH and FACH are f.f.s, e.g., power control. RACH and FACH are characterized as follows:

1. Random Access Channel(s) (RACH) characterised by:
   - existence in uplink only;
   - limited data field;
   - collision risk;
   - power control.
2. Forward Access Channel(s) (FACH) characterised by:
   - existence in downlink only;
   - possibility to use beam forming;
   - power control;
   - possibility to change rate fast (each 10ms).

~~The details of shared channels USCH and DSCH are f.f.s.~~

The shared channels USCH and DSCH are used in the same way as for UTRA TDD 3.84 Mcps.

Dedicated transport channel types are the same as for UTRA TDD 3.84 Mcps. For TDD low chip rate option, DCH has the possibility to use Uplink Synchronisation to maintain timing advance :

1. Dedicated Channel (DCH) characterised by:
   - existing in uplink or downlink;
   - possibility to use beam forming;
   - possibility to change rate fast (each 10ms);
   - fast power control;
   - Possibility to use Uplink Synchronisation

9 UE Simultaneous Physical Channels combinations

9.1 1.28 Mcps TDD Uplink

The table addresses the possible combinations of 1.28 Mcps TDD physical channels that can be supported in the uplink by one UE simultaneously on the same frequency in the TDD 1.28 Mcps option in any one 5 ms subframe. In 1.28Mcps TDD a physical channel corresponds to one code, one timeslot, one frequency.

Table 1: 1.28 Mcps TDD Uplink

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
1	UpPCH	N/A	Mandatory	UpPCH is used to establish the uplink synchronisation.
2	PRACH	RACH	Mandatory	
3	UpPCH + One DPCH	One or more DCH coded into a single CCTrCH	Mandatory	One DPCH is needed as reference measurement channel. UpPCH transmission to target cell in case of handover.
4	One DPCH	One or more DCH coded into a single CCTrCH	Mandatory	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities This combination is required for the reference measurement channel.
5	More than one DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities.
6	UpPCH+ one or more DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
7	PRACH + one or more DPCHs	RACH + one or more DCH coded into one or more than one CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
8	One or more PUSCH	One or more USCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This configuration is required for UE that operate shared channels.
9	UpPCH + one or more PUSCH	One or more USCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This combination may be used for shared channel operation only.
10	PRACH + one or more PUSCH	RACH + One or more USCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This combination may be used for shared channel operation only

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
11	One or more PUSCH + one or more DPCH	One or more USCH coded onto one or more CCTrCH + one or more DCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously
12	UpPCH + one or more PUSCH + one or more DPCH	one or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. This combination may be used for shared channel operation.
13	PRACH + one or more PUSCH + one or more DPCH	RACH + one or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs and the maximum channel bit rate are dependent on UE radio access capabilities. This combination may be used for shared channel operation.

~~The following table lists the combinations of 1.28 Mcps TDD physical channels that can be supported in the uplink by one UE in any one 5 ms sub-frame. With the exception of UpPTS, a TDD physical channel corresponds to one code, one timeslot and one frequency. The channel combinations listed are similar to those of TDD 3.84 Mcps, the differences relate to the additional physical channels that are supported by 1.28 Mcps TDD.~~

~~The combinations that have to be introduced or modified for 1.28 Mcps TDD are marked with "*".~~

~~Please note that details of using shared channels for 1.28 Mcps TDD are f.f.s.~~

Table 1: 1.28 Mcps TDD Uplink

	Physical Channel Combination	Transport Channel Combination	Baseline Capability or Service Dependent	Comment
1*	UpPTS	N/A	Baseline	UpPTS is used to obtain permission for RACH access.
2*	PRACH	RACH	Baseline	One RACH transport channel maps to one or more PRACH physical channels.
3	One or more DPCH	One or more DCH coded into one or more CCTrCH	Service dependent	The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability.
4*	UpPTS + one or more DPCH	one or more DCH coded into one or more CCTrCH	Service dependent	UpPTS is used to obtain permission for RACH access. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability.
5*	PRACH + one or more DPCH	RACH + one or more DCH coded into one or more CCTrCH	Service dependent	One RACH transport channel maps to one or more PRACH physical channels. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability.
6	One or more PUSCH	One or more USCH coded onto one or more CCTrCH	Service dependent	An USCH transport channel may map to one or more PUSCH physical channels based on system configuration. USCH requires a control channel (RACH/FACH or DCH); however, it is not required to be in the same 10ms frame as the USCH.
7*	UpPTS + one or more PUSCH	One or more USCH coded on to one or more CCTrCH	Service dependent	UpPTS is used to obtain permission for RACH access. An USCH transport channel may map to one or more PUSCH physical channels based on system configuration.
8*	PRACH + one or more PUSCH	RACH + One or more USCH coded on to one or more CCTrCH	Service dependent	One RACH transport channel maps to one or more PRACH physical channels. An USCH transport channel may map to one or more PUSCH physical channels based on system configuration.
9	One or more PUSCH + one or more DPCH	One or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. An USCH transport channel may map to one or more PUSCH physical channels based on system configuration.
10*	UpPTS + one or more PUSCH + one or more DPCH	one or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	UpPTS is used to obtain permission for RACH access. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. An USCH transport channel may map to one or more PUSCH physical channels based on system configuration.
11*	PRACH + one or more PUSCH + one or more DPCH	RACH + one or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	One RACH transport channel maps to one or more PRACH physical channels. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. An USCH transport channel may map to one or more PUSCH physical channels based on system configuration.

9.2 1.28 Mcps TDD Downlink

The table addresses the possible combinations of 1.28 Mcps TDD physical channels that can be supported in the downlink by one UE simultaneously on the same frequency in any one 5ms subframe. In 1.28Mcps TDD a physical channel corresponds to one code, one timeslot, one frequency.

Depending on UE radio capabilities UEs may be required to occassionally decode P-CCPCH of its own cell in the following Physical Channel Combinations: 5, 11,12,13,14,15,16,17.

To support handover it depends on UE capabilities if a UE can support the occasional decoding of neighbour cell P-CCPCH in the physical channel combinations 8, 9, 10, 11, 15,16, 17

Table 2: 1.28 Mcps TDD Downlink

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
1	FPACH	N/A	Mandatory	FPACH is used to answer the UE and to adjust the timing and synchronization shift of the UE
2	P-CCPCH	BCH	Mandatory	
3	S-CCPCH	FACH or/and PCH	Mandatory	
4	P-CCPCH +S-CCPCH	BCH + (FACH or/and PCH)	Mandatory	
5	More than one S-CCPCH	one or more FACH+ one ore more PCH	Depending on UE capabilities	
6	PICH	N/A	Mandatory	
7	FPACH + P-CCPCH + none, one or more S-CCPCH	BCH + (none,one or more FACH+ none.one ore more PCH)	Depending on UE capabilities	
8	2 DPCH	One or more DCH coded into a single CCTrCH	Mandatory	The maximum number of DCH and the maximum channel bit rate are dependent on UE radio access capabilities This channel is used as reference measurement channel
9	One or more DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities.
10	FPACH + one or more DPCH	One or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	FPACH is used to answer the UE and to adjust the timing and synchronization shift of the UE. The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
11	One or more S-CCPCH + one or more DPCH	(One or more FACH or/and PCH) + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	The maximum number of DCHs, the maximum number of CCTrCH and the maximum channel bit rate are dependent on UE radio access capabilities. This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
12	One or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This configuration is required for UE that operate shared channels.
13	FPACH + one or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This configuration is desirable but not essential for UE supporting shared channels.

	Physical Channel Combination	Transport Channel Combination	Mandatory or dependent on UE radio access capabilities	Comment
14	One or more S-CCPCH +one or more PDSCH	(One or more FACH and/or PCH) + One or more DSCH coded onto one or more CCTrCH	Depending on UE radio access capabilities	This configuration is desirable but not essential for UE supporting shared channels.
15	One or more PDSCH + one or more DPCH	One or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities	This configuration is required for UE that operate shared channels and dedicated channels simultaneously.
16	FPACH + one or more PDSCH + one or more DPCH	one or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities.	FPACH is used to answer the UE and to adjust the timing and synchronization shift of the UE. This configuration is desirable but not essential for UE supporting shared channels and dedicated channels simultaneously.
17	One or more S-CCPCH + one or more PDSCH + one or more DPCH	(One or more FACH and/or PCH) + one or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Depending on UE radio access capabilities.	This configuration is desirable but not essential for UE supporting shared channels and dedicated channels simultaneously.

~~The table describes the combinations of TDD physical channels that can be supported in the downlink by one UE in any one 5 ms frame. With the exception of DwPTS, a TDD physical channel corresponds to one code, one timeslot and one frequency. The channel combinations listed are similar to those of 3.84 Mcps TDD, the differences relating to the additional physical channels that are supported by the 1.28 Mcps TDD.~~

~~The combinations that have to be introduced or modified for 1.28 Mcps TDD are marked with "*".~~

~~Please note that details of using shared channels for 1.28 Mcps TDD are f.f.s.~~

Table 2: 1.28 Mcps TDD Downlink

	Physical Channel Combination	Transport Channel Combination	Baseline Capability or Service dependent	Comment
1*	DwPTS	N/A	Baseline	DwPTS provides cell synchronisation.
2*	FPACH	N/A	Baseline	FPACH indicates access rights to PRACH.
3	P-CCPCH and/or One or more S-CCPCH + PICH	BCH and/or PCH and/or one or more FACH	Baseline	BCH maps to the P-CCPCH in a frame. FACH can map to multiple S-CCPCH in a frame. PCH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
4*	FPACH+ P-CCPCH and/or One or more S-CCPCH + PICH	BCH and/or PCH and/or one or more FACH	Baseline	FPACH indicates access rights to PRACH. BCH maps to the P-CCPCH in a frame. FACH can map to multiple S-CCPCH in a frame. PCH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
5	One or more DPCH	One or more DCH coded into one or more CCTrCH	Service dependent	The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability
6*	FPACH and one or more DPCH	One or more DCH coded into one or more CCTrCH	Service dependent	FPACH indicates access rights to PRACH. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability
7	P-CCPCH and/or one or more S-CCPCH + PICH + one or more DPCH	BCH and/or PCH and/or one or more FACH + one or more DCH coded into one or more CCTrCH	Service dependent	The number of DCHs and the maximum channel bit rate are dependent on the UE Service Capability. BCH maps to the P-CCPCH in a frame. FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
8*	FPACH and P-CCPCH and/or one or more S-CCPCH + PICH + one or more DPCH	BCH and/or PCH and/or one or more FACH + one or more DCH coded into one or more CCTrCH	Service dependent	FPACH indicates access rights to PRACH. The number of DCHs and the maximum channel bit rate are dependent on the UE Service Capability. BCH maps to the P-CCPCH in a frame. FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
9	One or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Service dependent	A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. DSCH requires a control channel (FACH or DCH) however, it is not required to be in the same 10ms frame as the DSCH.
10*	FPACH + one or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Service dependent	FPACH indicates access rights to PRACH. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.

	Physical Channel Combination	Transport Channel Combination	Baseline Capability or Service dependent	Comment
11	One or more PDSCH + P-CCPCH and/or one or more S-CCPCH + PICH	BCH and/or PCH and/or one or more FACH + one or more DSCH coded onto one or more CCTrCH	Service dependent	BCH maps to the P-CCPCH in a frame. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. DSCH requires a control channel (FACH or DCH); however, it is not required to be in the same 10ms frame as the DSCH.
12 *	FPACH + one or more PDSCH + P-CCPCH and/or one or more S-CCPCH + PICH	BCH and/or PCH and/or one or more FACH + one or more DSCH coded onto one or more CCTrCH	Service dependent	FPACH indicates access rights to PRACH. BCH maps to the P-CCPCH in a frame. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. DSCH requires a control channel (FACH or DCH); however, it is not required to be in the same 10ms frame as the DSCH.
13	One or more PDSCH + one or more DPCH	One or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.

	Physical Channel Combination	Transport Channel Combination	Baseline Capability or Service dependent	Comment
14 *	FPACH + one or more PDSCH + one or more DPCH	One or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	FPACH indicates access rights to PRACH. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.
15	One or more PDSCH + P-CCPCH and/or one or more S-CCPCH + PICH + one or more DPCH	BCH and/or PCH and/or one or more FACH + one or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	BCH maps to the P-CCPCH in a frame. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.
16 *	FPACH + one or more PDSCH + P-CCPCH and/or one or more S-CCPCH + PICH + one or more DPCH	BCH and/or PCH and/or one or more FACH + one or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	FPACH indicates access rights to PRACH. BCH maps to the P-CCPCH in a frame. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.

9.3 1.28 Mcps TDD Uplink and Downlink Combinations

1.28 Mcps TDD basically supports the same possible uplink and downlink physical channel combinations as 3.84 Mcps TDD within a frame. Due to the use of FPACH, DwPTS and UpPTS, additional combinations are supported as indicated in the tables of this document. Furthermore, the different usage of PRACH in 1.28 Mcps TDD also causes some differences that can be derived from the tables in this document. For simplification, it is therefore omitted here to name all possible UL and DL physical channel combinations.

Please note that details of using shared channels for 1.28 Mcps TDD are f.f.s.

9.4 1.28 Mcps TDD UE Uplink Timeslot Combinations

This table describes possible uplink physical channels that can be supported by a UE within a specific time slot. UpPTS is not included because it occupies a single use timeslot.

The combinations that have to be introduced or modified for 1.28 Mcps TDD are marked with "*".

Please note that details of using shared channels for 1.28 Mcps TDD are f.f.s.

Table 3: 1.28 Mcps TDD UE Uplink Timeslot Combinations

	Physical Channel Combination	Transport Channel Combination	Baseline Capability or Service Dependent	Comment
1 *	PRACH	RACH	Baseline	One RACH transport channel maps to one or more PRACH physical channels.
2	One or more DPCH	One or more DCH coded into one or more CCTrCH	Service dependent	The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability.
3 *	PRACH and one or more DPCH	RACH and one or more DCH coded into one or more CCTrCH	Service dependent	PRACH can be located in the same timeslot as DPCH. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability.
4	One or more PUSCH	One or more USCH coded onto one or more CCTrCH	Service dependent	An USCH transport channel may map to one or more PUSCH physical channels based on system configuration. USCH requires a control channel (RACH/FACH or DCH); however, it is not required to be in the same 10 ms frame as the USCH.
5 *	PRACH and one or more PUSCH	RACH and one or more USCH coded onto one or more CCTrCH	Service dependent	PRACH can be located in the same timeslot as PUSCH. An USCH transport channel may map to one or more PUSCH physical channels based on system configuration.
6	One or more PUSCH + one or more DPCH	One or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. An USCH transport channel may map to one or more PUSCH physical channels based on system configuration.
7 *	PRACH and one or more PUSCH + one or more DPCH	RACH and one or more USCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	PRACH can be located in the same timeslot as both DPCH and PUSCH. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. An USCH transport channel may map to one or more PUSCH physical channels based on system configuration.

9.5 1.28 Mcps TDD UE Downlink Timeslot Combinations

This table describes possible downlink physical channels that can be supported by a UE within a specific time slot.

The combinations that have to be introduced or modified for 1.28 Mcps TDD are marked with "*".

Please note that details of using shared channels for 1.28 Mcps TDD are f.f.s.

Table 4: 1.28 Mcps TDD UE Downlink Timeslot Combinations

	Physical Channel Combination	Transport Channel Combination	Baseline Capability or Service dependent	Comment
1	P-CCPCH and/or one or more S-CCPCH+ PICH	BCH and/or PCH and/or one or more FACH	Baseline	BCH maps to the P-CCPCH. FACH can map to multiple S-CCPCH in a frame. PCH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
2*	FPACH and P-CCPCH and/or one or more S-CCPCH+ PICH	BCH and/or PCH and/or one or more FACH	Baseline	FPACH assigns PRACH access rights. BCH maps to the P-CCPCH. FACH can map to multiple S-CCPCH in a frame. PCH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
3	One or more DPCH	One or more DCH coded into one or more CCTrCH	Service dependant	The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability
4*	FPACH and one or more DPCH	One or more DCH coded into one or more CCTrCH	Service dependent	FPACH assigns PRACH access rights. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability.
5	P-CCPCH and/or one or more S-CCPCH+ PICH + one or more DPCH	BCH and/or PCH and/or one or more FACH and one or more DCH coded into one or more CCTrCH	Service dependent	The number of DCHs and the maximum channel bit rate are dependent on the UE Service Capability. BCH maps to the P-CCPCH. FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
6*	FPACH and P-CCPCH and/or one or more S-CCPCH+ PICH + one or more DPCH	BCH and/or PCH and/or one or more FACH and one or more DCH coded into one or more CCTrCH	Service dependent	FPACH assigns PRACH access rights. The number of DCHs and the maximum channel bit rate are dependent on the UE Service Capability. BCH maps to the P-CCPCH. FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel.
7	One or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Service dependent	A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. DSCH requires a control channel (FACH or DCH); however, it is not required to be in the same 10ms frame as the DSCH.
8*	FPACH and one or more PDSCH	One or more DSCH coded onto one or more CCTrCH	Service dependent	FPACH assigns PRACH access rights. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. DSCH requires a control channel (FACH or DCH); however, it is not required to be in the same 10ms frame as the DSCH.
9	P-CCPCH and/or one or more PDSCH + one or more S-CCPCH+ PICH	BCH and/or PCH and/or one or more FACH and one or more DSCH coded onto one or more CCTrCH	Service dependant	BCH maps to the P-CCPCH. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. DSCH requires a control channel (FACH or DCH); however, it is not required to be in the same 10ms frame as the DSCH.

	Physical Channel Combination	Transport Channel Combination	Baseline Capability or Service dependent	Comment
10 *	FPACH and P-CCPCH and/or one or more PDSCH + one or more S-CCPCH+ PICH	BCH and/or PCH and/or one or more FACH and one or more DSCH coded onto one or more CCTrCH	Service dependant	FPACH assigns PRACH access rights. BCH maps to the P-CCPCH. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration. DSCH requires a control channel (FACH or DCH); however, it is not required to be in the same 10ms frame as the DSCH.
11	One or more PDSCH + one or more DPCH	One or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.
12 *	FPACH and one or more PDSCH + one or more DPCH	One or more DSCH coded onto one or more CCTrCH + one or more DCH coded into one or more CCTrCH	Service dependent	FPACH assigns PRACH access rights. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.
13	One or more PDSCH + P-CCPCH and/or one or more S-CCPCH+ PICH+ one or more DPCH	BCH and/or PCH and/or one or more FACH and one or more DSCH coded onto one or more CCTrCH and one or more DCH coded into one or more CCTrCH	Service dependent	BCH maps to P-CCPCH. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.
14 *	FPACH and one or more PDSCH + P-CCPCH and/or one or more S-CCPCH+ PICH+ one or more DPCH	BCH and/or PCH and/or one or more FACH and one or more DSCH coded onto one or more CCTrCH and one or more DCH coded into one or more CCTrCH	Service dependent	FPACH assigns PRACH access rights. BCH maps to P-CCPCH. Each FACH can map to multiple S-CCPCH in a frame. PICH substitutes one or more paging sub-channels that are mapped on an S-CCPCH assigned for the PCH transport channel. The maximum number of DCHs and the maximum channel bit rate are dependent on UE Service Capability. A DSCH transport channel may map to one or more PDSCH physical channels based on system configuration.

11.3.5 Physical channel description

In addition to the physical channels defined for UTRA TDD, three physical channels are added to support low chip rate TDD option, they are: DwPTS, UpPTS and FPACH. Besides, two physical channels, Primary SCH and Secondary SCH, are not needed in low chip rate TDD option.

Because there is only one burst type in low chip rate TDD option, "burst type" defined as a parameter for physical channel is not necessary.

Due to the different RACH procedure of low chip rate TDD option, the Access Service Class selection applies to UpPTS, rather than PRACH (see section 14.1.4).

Shared channels, PUSCH and PDSCH, will be supported by TDD low chip rate option~~, but details are f.f.s~~

The added physical channels and the modifications for PRACH are described in the following:

11.3.5.1 DwPTS

- Tx diversity mode.
- SYNC code ID

11.3.5.2 UpPTS

- SYNC1 code ID

11.3.5.3 FPACH

- Scrambling code.
- Channelisation code.
- Timeslot
- Midamble shift
- Tx diversity mode.

11.3.5.4 PRACH

- Spreading factor for data part
- Power control info:
  - UL target SIR
  - Primary CCPCH DL TX power
  - UL interference
- Access Service Class Selection:
- Timeslots
- Spreading Codes
- Midamble Shift

13.3.2.5 Parameters required to define shared channels

~~Similar as for the other physical channels only minor changes can be expected. However, shared channels are out of the scope of this document.~~ The parameters required to define shared channels are essentially the same as those for the TDD 3.84 Mcps option. The differences reflect the differences in the physical layer parameters e.g. 8PSK is available as a modulation option. Their method of use is almost identical to that for the 3.84 Mcps option with the additions that closed loop power and timing correction can be applied to USCH transmissions. In addition the, UE can obtain timing correction before transmitting on the USCH through the completion of a SYNC1/FPACH exchange.
